

FEATURES

- Industry Standard Footprint
- 1kVDC Isolation
- Dual Isolated Output
- Short Circuit Protection
- Low Profile 24 Pin Case
- Efficiency to 81%
- Power Density 0.90W/cm³
- 2:1 Wide Input Range
- 24V & 48V Input
- 12V & 15V Output
- Footprint 4.73cm²
- UL 94V-0 Package Materials
- Operating Temperature Range -40°C to 85°C
- Load and Line Regulation <1% on Both Outputs
- No Heatsink Required
- Internal SMD Construction
- Fully Encapsulated
- Custom Solutions Available

DESCRIPTION

The NDT series is a range of low profile DC-DC converters offering dual outputs over a 2:1 input voltage range. All parts deliver 3W output power up to 85°C without heatsinking. A flyback oscillator design with isolated feedback is used to give regulation over the full operating range of 25% to 100% of full load. It is strongly recommended that external capacitors be used on input and output to guarantee performance over full load and input voltage range (see application notes for guidance). The plastic case is rated to UL 94V-0 and encapsulant to UL 94V-1 and the connection pins are formed from a tin plated alloy 42 leadframe.

1 Specifications typical at T_A = 25°C, nominal input voltage and rated output current unless otherwise specified.
 2 Measured at full load with external input/output capacitors, refer to test circuit.
 3 A lower load is entirely safe but higher levels of output ripple will be experienced.
 4 Calculated using MIL-HDBK-217F with nominal input voltage at full load.

NDT SERIES

Isolated 3W Wide Input Dual Output DC-DC Converters

TERMINOLOGY

LINE REGULATION

The percentage change in output voltage between low input voltage and high input voltage, measured with fixed output load

ie. A 5V output part with an output voltage of 5.05V @ high input voltage and 5.03V @ low input voltage would have a line regulation of 0.4%.

$$\text{line regulation} = \frac{V_{\text{OUT}}(\text{Low Input V}) - V_{\text{OUT}}(\text{High Input V})}{V_{\text{OUT}}(\text{Nominal Input V})} \times 100\%$$

Where $V_{\text{OUT}}(\text{Nominal Input V})$ is 5V.

APPLICATION NOTES

EXTERNAL CAPACITANCE

Although these converters will work without external capacitors, they are necessary in order to guarantee the full parametric performance over the full line and load range. All parts have been tested and characterised using the following values and test circuit

Value	
C_{IN}	C_{OUT}
10 μ F, 200V	47 μ F, 25V
