

VI TELEFILTER**Filter Specification****TFS 201****1/5****Measurement condition**

Ambient temperature: 23 °C
 Input power level: 0 dBm
 Termination impedances
 for input: 1080 Ω || -3,4 pF
 for output: 1080 Ω || -3,4 pF
 External coil: 130 nH

Characteristics**Remark:**

Reference level for the relative attenuation a_{rel} of the TFS 201 is the minimum of the pass band attenuation a_{min} . The minimum of the pass band attenuation a_{min} is defined as the insertion loss a_e . The centre frequency f_c is the arithmetic mean value of the upper and lower frequencies at the 3 dB filter attenuation level relative to the insertion loss a_e . The nominal frequency f_N is fixed on 201,0 MHz without tolerance. The given values for the relative attenuation a_{rel} and for the group delay ripple have to be reached at the frequencies given below also if the centre frequency f_c is shifted due to the temperature coefficient of frequency TC_f in the operating temperature range and due to a production tolerance for the centre frequency f_c .

D a t a	typ. value	tolerance / limit
Insertion loss (Reference level)	$a_e = a_{min}$	- max 7,0 dB
