

General Description

The MIC5367/8 is an advanced general purpose linear regulator offering high power supply rejection (PSRR) in an ultra-small 1.6mm x 1.6mm package. The MIC5368 includes an auto-discharge feature that is activated when the enable pin is low. The MIC5367/8 is capable of sourcing 200mA peak (150mA continuous) output current and offers high PSRR making it an ideal solution for any portable electronic application.

Ideal for battery powered applications, the MIC5367/8 offers 2% initial accuracy, low dropout voltage (180mV @ 150mA), and low ground current (typically 29 μ A). The MIC5367/8 can also be put into a zero-off-mode current state, drawing virtually no current when disabled.

The MIC5367/8 has an operating junction temperature range of -40°C to 125°C .

Data sheets and support documentation can be found on Micrel's web site at www.micrel.com.

Features

- Input voltage range: 2.5V to 5.5V
- 200mA peak (150mA continuous) output current
- Stable with 1 μ F ceramic output capacitors
- Low dropout voltage – 180mV @ 150mA
- Excellent Load/Line Transient Response
- Low quiescent current – 29 μ A
- High PSRR – 65dB
- Output discharge circuit – MIC5368
- High output accuracy
 - $\pm 2\%$ initial accuracy
- Tiny 1.6mm x 1.6mm Thin MLF[®] package
- Thermal shutdown and current limit protection

Applications

- Mobile phones
- Digital cameras
- GPS, PDAs, PMP, handhelds
- Portable electronics

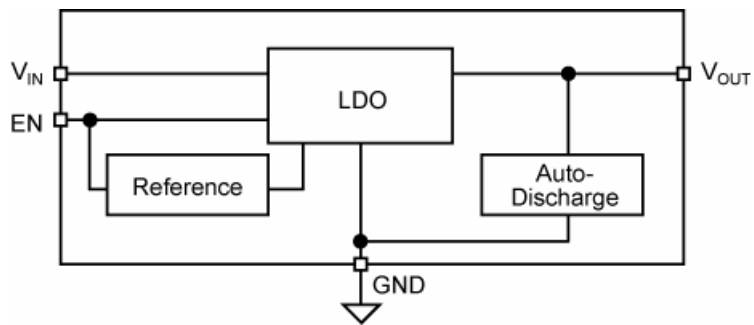

Typical Application

Ordering Information

Part Number ⁽¹⁾	Marking Code	Output Voltage	Temperature Range	Package ⁽²⁾	Lead Finish ⁽³⁾
MIC5367-1.2YMT	674	1.2V	-40°C to +125°C	6-Pin 1.6mm x 1.6mm Thin MLF [®]	Pb-Free
MIC5367-1.5YMT	F67	1.5V	-40°C to +125°C	6-Pin 1.6mm x 1.6mm Thin MLF [®]	Pb-Free
MIC5367-3.3YMT	67S	3.3V	-40°C to +125°C	6-Pin 1.6mm x 1.6mm Thin MLF [®]	Pb-Free
MIC5368-1.2YMT*	684	1.2V	-40°C to +125°C	6-Pin 1.6mm x 1.6mm Thin MLF [®]	Pb-Free
MIC5368-1.5YMT*	F68	1.5V	-40°C to +125°C	6-Pin 1.6mm x 1.6mm Thin MLF [®]	Pb-Free
MIC5368-3.3YMT*	68S	3.3V	-40°C to +125°C	6-Pin 1.6mm x 1.6mm Thin MLF [®]	Pb-Free

Notes:

- Other voltages available. Contact Micrel for details.
 - Thin MLF[®] ▲ = Pin 1 identifier.
 - Thin MLF[®] is a GREEN RoHS compliant package. Lead finish is NiPdAu. Mold compound is Halogen Free.
- * MIC5368 offers Auto-Discharge function.

Pin Configuration

6-Pin 1.6mm x 1.6mm Thin MLF[®] (MT)

Pin Description

Pin Number	Pin Name	Pin Function
1	EN	Enable Input: Active High. High = ON; Low = OFF. Do not leave floating.
2	GND	Ground.
3	VIN	Supply Input.
4	VOUT	Output Voltage.
5	NC	No Connect (Not internally connected).
6	NC	No Connect (Not internally connected).
EP	HS Pad	Exposed Heatsink Pad.

Absolute Maximum Ratings⁽¹⁾

Supply Voltage (V_{IN})	0V to 6V
Enable Voltage (V_{EN})	0V to V_{IN}
Power Dissipation (P_D)	Internally Limited ⁽³⁾
Lead Temperature (soldering, 10sec)	260°C
Junction Temperature (T_J)	-40°C to +150°C
Storage Temperature (T_S)	-65°C to +150°C
ESD Rating ⁽⁴⁾	2kV

Operating Ratings⁽²⁾

Supply Voltage (V_{IN})	2.5V to 5.5V
Enable Voltage (V_{EN})	0V to V_{IN}
Junction Temperature (T_J)	-40°C to +125°C
Junction Thermal Resistance	
1.6 x1.6 Thin MLF-6 (θ_{JA})	92.4°C/W

Electrical Characteristics⁽⁵⁾

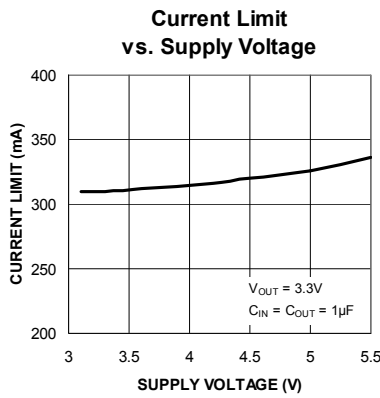

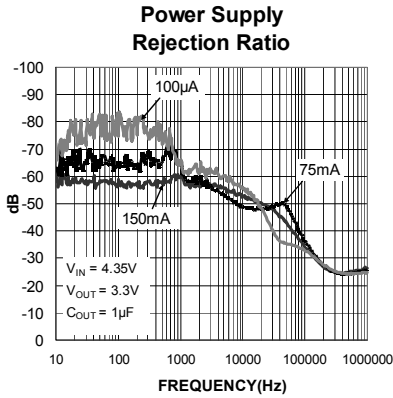

$V_{IN} = V_{EN} = V_{OUT} + 1V$; $C_{IN} = C_{OUT} = 1\mu F$; $I_{OUT} = 100\mu A$; $T_J = 25^\circ C$, **bold** values indicate -40°C to +125°C, unless noted.

Parameter	Condition	Min	Typ	Max	Units
Output Voltage Accuracy	Variation from nominal V_{OUT}	-2.0		+2.0	%
	Variation from nominal V_{OUT} ; -40°C to +125°C	-3.0		+3.0	%
Line Regulation	$V_{IN} = V_{OUT} + 1V$ to 5.5V; $I_{OUT} = 100\mu A$		0.02	0.3	%
Load Regulation ⁽⁶⁾	$I_{OUT} = 100\mu A$ to 150mA		0.3	1	%
Dropout Voltage ⁽⁷⁾	$I_{OUT} = 50mA$		60	135	mV
	$I_{OUT} = 150mA$		180	380	mV
Ground Pin Current ⁽⁸⁾	$I_{OUT} = 0mA$		29	39	μA
Ground Pin Current in Shutdown	$V_{EN} \leq 0.2V$		0.05	1	μA
Ripple Rejection	$f = \text{up to } 1kHz$; $C_{OUT} = 1\mu F$		65		dB
	$f = 1kHz - 10kHz$; $C_{OUT} = 1\mu F$		55		dB
Current Limit	$V_{OUT} = 0V$	200	325	550	mA
Output Voltage Noise	$C_{OUT} = 1\mu F$, 10Hz to 100kHz		200		μV_{RMS}
Auto-Discharge NFET Resistance	MIC5368 Only; $V_{EN} = 0V$; $V_{IN} = 3.6V$; $I_{OUT} = -3mA$		30		Ω
Enable Input					
Enable Input Voltage	Logic Low			0.2	V
	Logic High	1.2			V
Enable Input Current	$V_{IL} \leq 0.2V$		0.01	1	μA
	$V_{IH} \geq 1.2V$		0.01	1	μA
Turn-on Time	$C_{OUT} = 1\mu F$; $I_{OUT} = 150mA$		50	125	μs

Notes:

- Exceeding the absolute maximum rating may damage the device.
- The device is not guaranteed to function outside its operating rating.
- The maximum allowable power dissipation of any T_A (ambient temperature) is $P_{D(max)} = (T_{J(max)} - T_A) / \theta_{JA}$. Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into thermal shutdown.
- Devices are ESD sensitive. Handling precautions recommended. Human body model, 1.5k Ω in series with 100pF.
- Specification for packaged product only.
- Regulation is measured at constant junction temperature using low duty cycle pulse testing; changes in output voltage due to heating effects are covered by the thermal regulation specification.
- Dropout voltage is defined as the input-to-output differential at which the output voltage drops 2% below its nominal value measured at 1V differential. For outputs below 2.5V, dropout voltage is the input-to-output differential with the minimum input voltage 2.5V.
- Ground pin current is the regulator quiescent current. The total current drawn from the supply is the sum of the load current plus the ground pin current.

Typical Characteristics

Functional Characteristics

Application Information

MIC5367 and MIC5368 are Low noise 150mA LDOs. The MIC5368 includes an auto-discharge circuit that is switched on when the regulator is disabled through the Enable pin. The MIC5367/8 regulator is fully protected from damage due to fault conditions, offering linear current limiting and thermal shutdown.

Input Capacitor

The MIC5367/8 is a high-performance, high bandwidth device. An input capacitor of 1 μ F is required from the input to ground to provide stability. Low-ESR ceramic capacitors provide optimal performance at a minimum of space. Additional high-frequency capacitors, such as small-valued NPO dielectric-type capacitors, help filter out high-frequency noise and are good practice in any RF-based circuit. X5R or X7R dielectrics are recommended for the input capacitor. Y5V dielectrics lose most of their capacitance over temperature and are therefore, not recommended.

Output Capacitor

The MIC5367/8 requires an output capacitor of 1 μ F or greater to maintain stability. The design is optimized for use with low-ESR ceramic chip capacitors. High ESR capacitors are not recommended because they may cause high frequency oscillation. The output capacitor can be increased, but performance has been optimized for a 1 μ F ceramic output capacitor and does not improve significantly with larger capacitance.

X7R/X5R dielectric-type ceramic capacitors are recommended because of their temperature performance. X7R-type capacitors change capacitance by 15% over their operating temperature range and are the most stable type of ceramic capacitors. Z5U and Y5V dielectric capacitors change value by as much as 50% and 60%, respectively, over their operating temperature ranges. To use a ceramic chip capacitor with Y5V dielectric, the value must be much higher than an X7R ceramic capacitor to ensure the same minimum capacitance over the equivalent operating temperature range.

No-Load Stability

Unlike many other voltage regulators, the MIC5367/8 will remain stable and in regulation with no load. This is especially important in CMOS RAM keep-alive applications.

Enable/Shutdown

The MIC5367/8 comes with an active-high enable pin that allows the regulator to be disabled. Forcing the enable pin low disables the regulator and sends it into a “zero” off-mode-current state. In this state, current consumed by the regulator goes nearly to zero. Forcing the enable pin high enables the output voltage. The active-high enable pin uses CMOS technology and the enable pin cannot be left floating; a floating enable pin may cause an indeterminate state on the output.

Thermal Considerations

The MIC5367/8 is designed to provide 150mA of continuous current in a very small package. Maximum ambient operating temperature can be calculated based on the output current and the voltage drop across the part. For example if the input voltage is 3.3V, the output voltage is 1.5V, and the output current = 150mA. The actual power dissipation of the regulator circuit can be determined using the equation:

$$P_D = (V_{IN} - V_{OUT1}) I_{OUT} + V_{IN} I_{GND}$$

Because this device is CMOS and the ground current is typically <100 μ A over the load range, the power dissipation contributed by the ground current is < 1% and can be ignored for this calculation.

$$P_D = (3.3V - 1.5V) \times 150mA$$

$$P_D = 0.27W$$

To determine the maximum ambient operating temperature of the package, use the junction-to-ambient thermal resistance of the device and the following basic equation:

$$P_{D(max)} = \left(\frac{T_{J(max)} - T_A}{\theta_{JA}} \right)$$

$T_{J(max)} = 125^\circ\text{C}$, the maximum junction temperature of the die, θ_{JA} thermal resistance = 92.4 $^\circ\text{C/W}$ for the YMT package.

Substituting P_D for $P_{D(max)}$ and solving for the ambient operating temperature will give the maximum operating conditions for the regulator circuit. The junction-to-ambient thermal resistance for the minimum footprint is 92.4 $^\circ\text{C/W}$.

The maximum power dissipation must not be exceeded for proper operation.

For example, when operating the MIC5367-1.5YMT at an input voltage of 3.3V and 150mA load with a minimum footprint layout, the maximum ambient operating temperature T_A can be determined as follows:

$$0.27W = (125^{\circ}\text{C} - T_A)/(92.4^{\circ}\text{C/W})$$

$$T_A = 100^{\circ}\text{C}$$

Therefore the maximum ambient operating temperature of 100°C is allowed in a 1.6mm x 1.6mm Thin MLF[®] package. For a full discussion of heat sinking and thermal effects on voltage regulators, refer to the "Regulator Thermals" section of *Micrel's Designing with Low-Dropout Voltage Regulators* handbook.
