Recommended Soldering Conditions

1. Hand Solder

Basic spec is 280 3 sec one time only.

2. Wave Solder

3. LEAD Reflow Solder

4. PB-Free Reflow Solder

Note: 1.Wave solder and reflow soldering should not be made more than one time.  
2.You can just only select one of the soldering conditions as above.

**Precautions For Use:**

**Storage time:**

- 1.The operation of Temperatures and RH are : 5 ~35 ,RH<60%.
- 2.Once the package is opened, the products should be used within a week.  
Otherwise, they should be kept in a damp proof box with descanting agent.  
Considering the tape life, we suggest our customers to use our products within a year(from production date).
- 3.If opened more than one week in an atmosphere 5 ~ 35 ,RH<60%, they should be treated at 60 ±5 fo r 15hrs.

**Drive Method:**

LED is a current operated device, and therefore, requirer some kind of current limiting incorporated into the driver circuit. This current limiting typically takes the form of a current limiting resistor placed in series with the LED.

Consider worst case voltage variations than could occur across the current limiting resistor. The forwr d current should not be allowed to change by more than 40 % of its desired value.

Circuit model A

Circuit model B

(A) Recommended circuit.

(B) The difference of brightness between LED could be found due to the VF-IF characteristics of LED.

**Cleaning:**

Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED.

**ESD(Electrostatic Discharge):**

Static Electricity or power surge will damage the LED. Use of a conductive wrist band or anti-electrosatic glove is recommended when handing these LED. All devices, equipment and machinery must be properly grounded.
