

(Low Distortion) 1 Hz to 102.4 kHz 8 or 9-Bit Frequency Selectable

SPPOSC Series

2" X 2"

Oscillators: Dual Channel

& Quadrature

Description

The SPPOSC Series is a compact, dual channel, phase continuous, DSP based, programmable sine wave generator with analog outputs and 8 or 9 bits of frequency selection. All SPPOSC-01 platforms are small, low profile, easy to use signal generators, which require no external components and can cover the audio/ultrasonic bandwidth from 1 Hz to 102.4 kHz in several standard and custom frequency ranges.

SPPOSC's use a fixed point DSP with 32-bit math, 24-bits of resolution and dual channel DACs. Noise floor and distortion are typically –100dB to 20 kHz and < – 80 dB to 100 kHz.

Features/ Benefits:

- Available in a single, dual or quadrature (0.1° phase stability) form factor, SPPOSC oscillators with up to 512 tuning steps insure design flexibility in a compact 2" x 2" footprint while minimizing board space requirements.
- This plug-in, turnkey signal source, with a standard or custom algorithm, allows product designers to incorporate various precision onboard programmable signal generators in a standard pin-out and form factor thereby reducing design time while maximizing design flexibility.
- When used in conjunction with the SPPDB-01 development board, SPPOCS signal generators require minimal set-up time to provide low noise and distortion signals for laboratory evaluation or precision field installations.

Applications

- · Low distortion signal source for ATE systems
- Sound and vibration testing
- Quadrature signal generator: sine / cosine, standard or custom.
- Tone generation in speech and hearing analysis, research, pathology

OSCILLATOR SOFTWARE SELECTION GUIDE

SPPOSC-01	Low Frequency Ranges				
SWDO-01	Dual Chl. Prog. Osc. 1 Hz - 256 Hz, 1 Hz Steps				
SWDO-02	Dual Chl. Prog. Osc. 10 Hz - 2.56 kHz, 10 Hz Steps				
SWQO-01	Quadrature Prog. Osc. 1 Hz - 512 Hz, 1 Hz Steps				
SWQO-02	Quadrature Prog. Osc. 10 Hz - 5.12 kHz, 10 Hz Steps				
SWSO-01	Same Prog. Dual Chl. Osc. 1 Hz - 512 Hz, 1 Hz Steps				
SWSO-02	Same Prog. Dual Chl. Osc. 10 Hz - 5.12 kHz, 10 Hz Steps				

SPPOSC-02	High Freque	ency Ranges

SWDO-03	Dual Chl. Prog. Osc. 100 Hz - 25.6 kHz,100 Hz Steps
SWDO-04	Dual Chl. Prog. Osc. 200 Hz - 51.2 kHz, 200 Hz Steps
SWDO-05	Dual Chl. Prog. Osc. 400 Hz - 102.4 kHz, 400 Hz Steps
SWQO-03	Quadrature Prog. Osc. 100 Hz - 51.2 kHz, 100 Hz Steps
SWQO-04	Quadrature Prog. Osc. 200 Hz - 102.4 kHz, 200 Hz Steps
SWSO-03	Same Prog. Dual Chl. Osc. 100 Hz - 51.2 kHz, 100 Hz Steps
SWSO-04	Same Prog. Dual Chl. Osc. 200 Hz - 102.4 kHz, 200 Hz Steps

Oscillators: Dual Channel

& Quadrature

(Low Distortion) 1 Hz to 102.4 kHz 8 or 9-Bit Frequency Selectable

Frequency Selection Data Port

Data Format

Logic "0" 0VDC Min – 2VDC Max
 Logic "1" 3.5VDC Min – 5Vdc Max

 $\begin{array}{ll} \text{Bit Weighting (Binary Coded)} \\ \text{D}_0 & \text{LSB} \\ \text{D}_7 \text{ or D}_8 \text{ (for 9-bits)} & \text{MSB} \end{array}$

Frequency: 256:1 (8-bit dual), or 512:1 (9-bit single)

- 1. The frequency selection data word bus consists of D_0 to D_7 for 8-bit programming and D_0 to D_8 for 9-bit programming.
- 2. For dual Channel 8-Bit programming D_8 is Channel Select and requires a minimum of 21 µsecs set-up time at a logic "1", 5volts for channel 2 or logic "0", 0 volts, for Channel 1
- 3. For an 8-bit dual channel unit, the Program enable or "Latch pin" is D₉. To enable a program change, this pin must be pulled to a logic high "1" or 5 volts. If the pin is low, a frequency change will not be read and the channels will continue to run the previous values.
- 4. The D₀ D₉ bus data are checked simultaneously. New frequency selection data must be present or updated at the time Channel select occurs to be valid. The Program enable or "Latch" pin must be high. While the latch pin is high, the Frequency data must remain on the bus until the user applies the next frequency change. The pins do not float during programming! The frequency ports are polled by the system every 21 μseconds. Within 21 μsecs of programming, if the latch goes low, the programmed values are retained and the pins may float.

Performance	Specifications						
Available Tuning Range	1.00 Hz to 102.4 kHz						
Frequency Accuracy	< ± 0.05 %						
Amplitude Accuracy	< ± 0.1 dB						
Total Broad Band Noise (Ref to 3.53 VRMS)	< -100dB Max., -105dB Typ.						
Total Harm. Dist.(THD) (10V peak to peak)	<-100 dB Max. to 20 kHz < - 80 dB Max. to 102.4 kHz						
Channel to Channel phase tracking	< ± 0.10°						
(SWDO-01 to 05) Cross talk dual channel version with different frequencies on each channel.	1 Hz –10K < - 100 dB Typ. 10kH - 100K < - 90 dB Typ.						

There are three software configurations available for these **SPPOSC-01** / **-02** oscillators.

Software Options:

- 1. **SWDO-01 to -05:** Dual channel with independently selectable frequencies.
- 2. **SWSO-01 to -04:** Dual Channel, same output and same frequency selection.
- 3. **SWQO-01 to -04:** Quadrature, single frequency selection and Sine/Cosine outputs.

All configurations are available with custom frequency selections. Consult factory for a quotation.

These special programs will be assigned a custom suffix (CXX) at the time of order.

Specifications

(@25°C and Vs = ± 15 Vdc)

Analog Output Characteristics

 $\begin{array}{lll} \mbox{Minimum load Impedance} & 10 \ \mbox{k}\Omega \\ \mbox{Maximum capacitive load} & 50 \ \mbox{pF}. \\ \mbox{Output voltage} & \pm 5 \ \mbox{V peak (sine wave)} \\ \mbox{Offset Voltage} & 2 \ \mbox{mV Typ. } 10 \mbox{mV Max}. \end{array}$

Power Supply (±Vs)

Analog Vs range ±10Vdc Min to ±15 Vdc Max.

Analog supply current at Max. Vs 17 mA Typ.

Digital PS Voltage +5 Vdc

Digital supply current 150 mA Typ.

Power consumption at Max. Vs 1.5 watts Max.

Care must be taken to stay above the minimum Vs in order to maintain the linearity and distortion performance of the oscillator.

Temperature

Operating 0 to $+70^{\circ}$ C Storage -25 to $+85^{\circ}$ C

Size 2.0" x 2.0" x 0.5"

A socketed development board (SPPDB-01) can double as an oscillator mounting assembly, to facilitate product evaluation or laboratory use.

The **SPPDB-01** development board is specified and sold separately.
