## Electron Bombardment CCD Cameras C7190

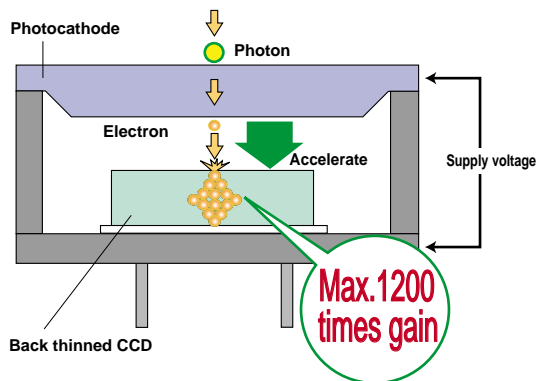

C7190-11W, -12W, -13W

C7190-21, -23

Hamamatsu EB-CCD cameras use an innovative high gain sensor that puts advanced technology to work to obtain high gain images in very low light. This technology involves a special vacuum chamber in which electrons generated at the photocathode are accelerated by a high potential into a newly developed, back thinned, back illuminated CCD. This direct bombardment of the CCD by accelerated electrons provides high gain, high resolution images, with none of the problems associated with Micro Channel Plates which are used in other devices. The sensor in the EB-CCD is driven by low noise circuits and features MPP (Multi Pin Phase) technology to achieve good S/N ratios at high gain conditions and a long service life. Two different implementations of this technology are available. We offer a selection between a video rate camera with both analog and 10 bit digital output at 30 fps and a higher precision but slower frame rate model with software selectable 10 and 12 bit digitizers included. A selection of photocathode materials is available for tailoring these cameras to almost any application. This new technology is ideal for demanding applications such as genetic and bioscience research, materials research, laminar flow applications, and many physical sciences requiring the rapid acquisition of images at low light levels.

### ■ SENSOR STRUCTURE

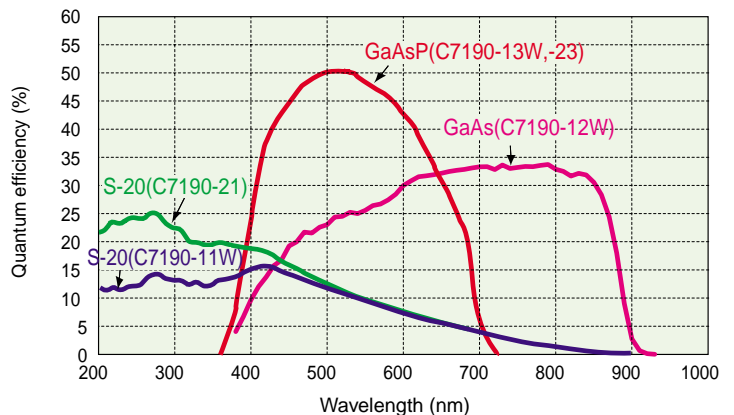

### ■ FEATURES

- Amplification gain of up to 1200 times (C7190-11W, -12W, -13W)
- High S/N Ratio
- Ultra-high sensitivity
- Two types are available

Dual scan digital type : C7190-11W, -12W, -13W

Video rate digital type : C7190-21, -23

### ■ SPECTRAL RESPONSE CHARACTERISTICS

\* This is typical, not guaranteed.

## SPECIFICATIONS

Type. Number	C7190-11W	C7190-12W	C7190-13W	C7190-21	C7190-23
CCD Structure	Back thinned full frame transfer CCD			Back thinned frame transfer CCD	
Total no. of pixels	512(H) × 512(V)			680(H) × 1000(V)	
Effective no. of pixels	512(H) × 512(V)			658(H) × 490(V)	
Cell size	24 μm × 24 μm			14 μm × 14 μm	
Effective area	12.3 mm × 12.3 mm / 1-inch format			8.96 mm × 6.72 mm / 2/3-inch format	
Readout noise	15 electrons r.m.s. (slow scan)			—	
Full well capacity	150,000 electrons (typ.)			65,000 electrons (typ.)	
CCD Dark current	8 electrons/pixel/sec at -25 °C			—	
Frame rate	Slow scan: 3 Hz High scan: 5 Hz			Non-interlace 30 Hz Interlace 60 Hz	
A/D converter	Slow scan: 12 bit High scan: 12 bit			10 bit	
Gate function	10 μsec			—	
Gain	to 1200 times			600 to 700 times	200 to 250 times
Sensitivity control	Possible			Possible	
System gain	Low: 36 electrons/count High: 15 electrons/count Super High: 4 electrons/count			—	
Cooling temperature	-25 °C			Ambient temperature	
Photocathode	S-20	GaAs	GaAsP	S-20	GaAsP
Sensor structure	Proximity focused type			Proximity focused type	
Data output	RS-422 digital out			RS-644 digital out and RS-170A out, SCSI out (optional)	
Camera controller	RS-232C			RS-232C and SCSI (optional)	
Functions	<ul style="list-style-type: none"> <li>• Dual mode readout</li> <li>• Contrast enhancement</li> </ul>			<ul style="list-style-type: none"> <li>• Contrast enhancement</li> <li>(Note: The following functions are not effective with RS-644 digital output)</li> <li>• Real time background subtraction</li> <li>• Recursive filter</li> <li>(2, 4, 8, 16, 32, 64 frame selectable)</li> </ul>	

## DIMENSIONAL OUTLINES (Unit: mm)

### ● C7190-11W, -12W, -13W

- Camera head (approx. 4.5 Kg)

- Camera controller (approx. 10 Kg)

### ● C7190-21, -23

- Camera head (approx. 1.4 Kg)

- Camera controller (approx. 4.6 Kg)
