

HLMP-CW70, HLMP-CW72

T-1 3/4 Precision Optical Performance White LED

Data Sheet

Description

This high intensity white LED lamp is based on InGaN material technology. A blue LED die is coated by phosphor to produce white. The typical resulting color is described by the coordinates $x = 0.32$, $y = 0.32$ using the 1931 CIE Chromaticity Diagram.

This T-1 3/4 lamp is untinted, diffused, and incorporate precise optics which produce well defined spatial radiation patterns at specific viewing cone angle.

Applications

- Electronic Signs and Signals
- Small Area Illumination
- Legend Backlighting
- General Purpose Indicators

Features

- Highly Luminous White Emission
- 70° viewing angle

Benefit

- Reduced Power Consumption, Higher Reliability, and Increased Optical/Mechanical Design Flexibility Compared to Incandescent Bulbs and Other Alternative White Light Sources

Package Dimensions

- Notes:
1. All dimensions are in millimeters / inches.
 2. Epoxy meniscus may extend about 1mm (0.040") down the leads.

CAUTION : These devices are Class 1 ESD sensitive. Please observe appropriate precautions during handling and processing. Refer to Avago Technologies Application Note AN-1142 for additional details.

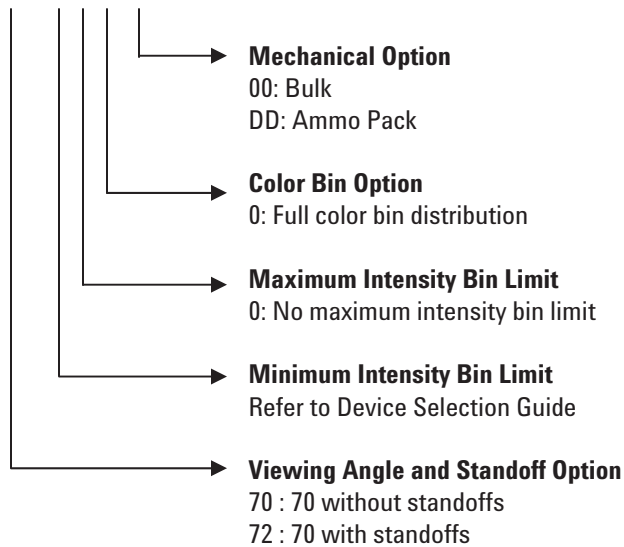

Device Selection Guide

Part Number	Min Luminous Intensity I _v (mcd) @ 20mA	Max Luminous Intensity I _v (mcd) @ 20mA	Standoff Option	Package Dimension
HLMP-CW70-LP0xx	400	1150	No	A
HLMP-CW72-LP0xx	400	1150	Yes	B

Tolerance for intensity limit is ± 15%

Part Numbering System

HLMP – CW7x - x x x xx

Absolute Maximum Ratings (TA = 25°C)

Parameters	Value	Unit
DC forward current ^[1]	30	mA
Peak forward current ^[2]	100	mA
Power dissipation	120	mW
Reverse Voltage (I _R = 10μA)	5	V
LED junction temperature	110	°C
Operating temperature range	-40 to +85	°C
Storage temperature range	-40 to +100	°C

Notes:

1. Derate linearly as shown in Figure 5.
2. Duty factor 10%, 1 KHz.

Electrical Characteristics (TA = 25°C)

Forward Voltage, V _F (V) @ I _F = 20 mA		Reverse Breakdown, V _R (V) @ I _R = 10 mA	Capacitance, C (pF), V _F = 0, f = 1 MHz	Thermal Resistance R _{θJ-PIN} (°C/W)
Typ.	Max.	Min.	Typ.	Typ.
3.6	4.0	5	70	240

Optical Characteristics (TA = 25°C)

Typical Chromaticity Coordinates [1]

X	0.32	Viewing Angle 2θ1/2 (Degrees) [2] Typ.
Y	0.32	70

Notes:

1. The chromaticity coordinates are derived from the CIE 1931 Chromaticity Diagram and represent the perceived color of the device.
2. 1/2 is the off-axis angle where the luminous intensity is 1/2 the peak intensity.

Intensity Bin Limits (mcd at 20 mA)

Bin	Intensity (mcd) at 20 mA	
	Min	Max
K	310	400
L	400	520
M	520	680
N	680	880
P	880	1150
Q	1150	1500
R	1500	1900
S	1900	2500
T	2500	3200
U	3200	4200
V	4200	5500
W	5500	7200

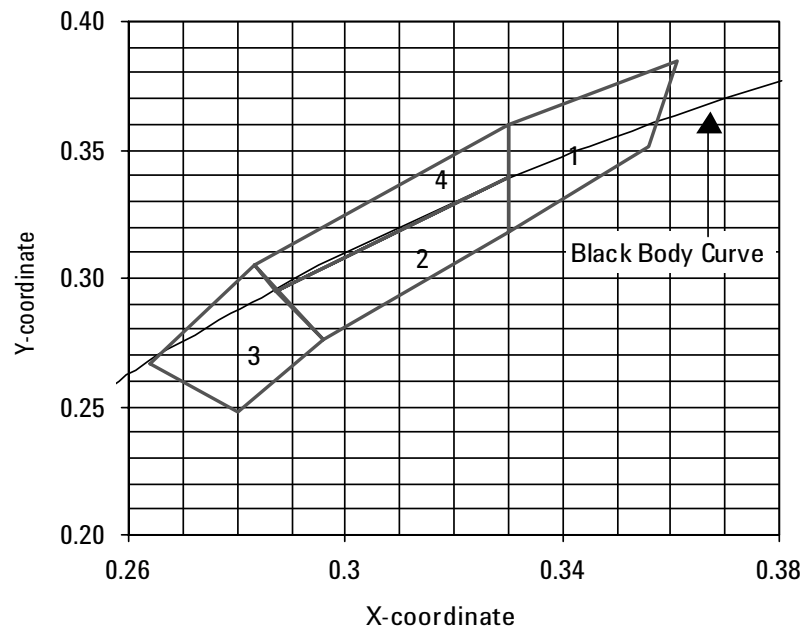

Tolerance for each bin limit is $\pm 15\%$.

Color Bin Limit Tables

		Limits (Chromaticity Coordinates)			
		X	Y	X	Y
1	X	0.330	0.330	0.356	0.361
	Y	0.360	0.318	0.351	0.385
2	X	0.287	0.296	0.330	0.330
	Y	0.295	0.276	0.318	0.339
3	X	0.264	0.280	0.296	0.283
	Y	0.267	0.248	0.276	0.305
4	X	0.283	0.287	0.330	0.330
	Y	0.305	0.295	0.339	0.360

Tolerance for each bin limit is ± 0.01

Color Bin Limits with Respect to CIE 1931 Chromaticity Diagram

Note:

- Bin categories are established for classification of products. Products may not be available in all bin categories. Please contact your Avago Technologies representative for information on currently available

Precautions:

Lead Forming:

- The leads of an LED lamp may be preformed or cut to length prior to insertion and soldering into PC board.
- If lead forming is required before soldering, care must be taken to avoid any excessive mechanical stress induced to LED package. Otherwise, cut the leads of LED to length after soldering process at room temperature. The solder joint formed will absorb the mechanical stress of the lead cutting from traveling to the LED chip die attach and wirebond.
- It is recommended that tooling made to precisely form and cut the leads to length rather than rely upon hand operation.

Soldering Condition:

- Care must be taken during PCB assembly and soldering process to prevent damage to LED component.
- The closest LED is allowed to solder on board is 1.59mm below the body (encapsulant epoxy) for those parts without standoff.
- Recommended soldering condition:

	Wave Soldering	Manual Solder Dipping
Pre-heat temperature	105 °C Max.	-
Preheat time	30 sec Max	-
Peak temperature	250 °C Max.	260 °C Max.
Dwell time	3 sec Max.	5 sec Max

- Wave soldering parameter must be set and maintain according to recommended temperature and dwell time in the solder wave. Customer is advised to periodically check on the soldering profile to ensure the soldering profile used is always conforming to recommended soldering condition.
- If necessary, use fixture to hold the LED component in proper orientation with respect to the PCB during soldering process.
- Proper handling is imperative to avoid excessive thermal stresses to LED components when heated. Therefore, the soldered PCB must be allowed to cool to room temperature, 25°C before handling.
- Special attention must be given to board fabrication, solder masking, surface plating and lead holes size and component orientation to assure solderability.
- Recommended PC board plated through holes size for LED component leads.

LED component lead size	Diagonal	Plated through hole diameter
0.457 x 0.457mm (0.025 inch)	0.646 mm (0.038 to 0.042 inch)	(0.018 x 0.018inch) 0.976 to 1.078 mm
0.508 x 0.508mm (0.028 inch)	0.718 mm (0.041 to 0.045 inch)	(0.020 x 0.020inch) 1.049 to 1.150mm

Note: Refer to application note AN1027 for more information on soldering LED components.
