## Notes:

1. The dominant wavelength, $\lambda_{d}$, is derived from the CIE chromaticity diagram and represents the color of the device.
2. The radiant intensity, $I_{e}$, in watts per steradian, may be found from the equation $I_{e}=I_{V} / \eta_{V}$, where $I_{V}$ is the luminous intensity in candelas and $\eta_{V}$ is luminous efficacy in lumens/ watt.
