

### 1-Line To 10-Line Clock Driver With 3-State Outputs

#### **Features**

- Low Output Skew, Low Pulse Skew for Clock-Distribution and Clock-Generation Applications.
- Operates at 3.3V Supply Voltage.
- LVTTL-Compatible Inputs and Outputs.
- Supports Mixed-Mode Signal Operation.
   (5V Input and Output Voltages With 3.3V Supply Voltage).
- Distributes One Clock Input to Ten Outputs.
- Outputs have Internal Series Damping Resistor to Reduce Transmission Line Effects.
- Distributed V<sub>CC</sub> and Ground Pins Reduce Switching Noise.
- Package Options Include Plastic Small-Outline and Shrink Small-Outline Packages.

### **Product Description**

The ASM2P2351AH is a high-performance clock-driver circuit that distributes one input (A) to ten outputs (Y) with minimum skew for clock distribution. The output-enable  $(\overline{OE})$  input disables the outputs to a high-impedance state. Each output has an internal series damping resistor to improve signal integrity at the load. The ASM2P2351AH operates at nominal 3.3V Supply Voltage.

The propagation delays are adjusted at the factory using the P0 and P1 pins. The factory adjustments ensure that the part-to-part skew is minimized and is kept within a specified window. Pins P0 and P1 are not intended for customer use and should be connected to GND.

The ASM2P2351AH is characterized for operation from 0°C to 70°C.

# Switching Characteristics temperature and $V_{CC}$ coefficients over recommended operating free-air temperature and $V_{CC}$ range (see Note 3)

|                                     | Parameter                                                            | From (Input) | To<br>(Output) | Min | Max               | Unit          |
|-------------------------------------|----------------------------------------------------------------------|--------------|----------------|-----|-------------------|---------------|
| t <sub>PLH</sub> (T)                | Average temperature coefficient of low to high propagation delay     | Α            | Y              |     | 85 <sup>1</sup>   | pS/10°C       |
| t <sub>PHL</sub> (T)                | Average temperature coefficient of high to low propagation delay     | Α            | Y              |     | 50 <sup>1</sup>   | pS/10°C       |
| $t_{PLH}(V_{CC})$                   | Average $V_{\text{CC}}$ coefficient of low to high propagation delay | Α            | Y              |     | -145 <sup>2</sup> | pS/ 100<br>mV |
| t <sub>PHL</sub> (V <sub>CC</sub> ) | Average $V_{\text{CC}}$ coefficient of high to low propagation delay | Α            | Y              |     | -100 <sup>2</sup> | pS/ 100<br>mV |

Note: 1  $t_{PLH}(T)$  and  $t_{PHL}(T)$  are virtually independent of  $V_{CC}$ .

<sup>2</sup>  $t_{PLH}(V_{CC})$  and  $t_{PHL}(V_{CC})$  are virtually independent of temperature.

<sup>3</sup> This data was extracted from characterization material and are not tested at the factory.

### **Parameter Measurement Information**

### **LOAD CIRCUIT**

6 of 12

rev 0.3

Figure 1. Load Circuit and Voltage Waveforms

NOTES: A. CL includes probe and jig capacitance.

- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input pulses are supplied by generators having the following characteristics: PRR 3 10 MHz, ZO =  $50\Omega$ , tr 3 2.5 nS, tf 3 2.5 nS.
- D. The outputs are measured one at a time with one transition per measurement.

# rev 0.3 Parameter Measurement Information

Figure 2. Waveforms for Calculation of  $t_{sk(o)}$ ,  $t_{sk(p)}$ ,  $t_{sk(pr)}$ 

NOTES: A. Output skew,  $t_{\mbox{\tiny Sk(0)}}$  is calculated as the greater of:

- The difference between the fastest and slowest of  $t_{PLHn}$  (n = 1, 2, 3, 4, 5, 6, 7, 8, 9, 10)
- The difference between the fastest and slowest of  $t_{PHLn}$  (n = 1, 2, 3, 4, 5, 6, 7, 8, 9, 10)
- B. Pulse skew,  $t_{sk(p)}$ , is calculated as the greater of |  $t_{PLH}n t_{PHL}n$  | (n = 1, 2, 3, 4, 5, 6, 7, 8, 9, 10).
- C. Process skew, t<sub>sk(pr)</sub>, is calculated as the greater of:
  - The difference between the fastest and slowest of t<sub>PLHn</sub> (n = 1, 2, 3, 4, 5, 6, 7, 8, 9, 10) across multiple devices under identical operating conditions
  - The difference between the fastest and slowest of tehlin (n = 1, 2, 3, 4, 5, 6, 7, 8, 9, 10) across multiple devices under identical operating conditions

All other brand and product names may be the trademarks of their respective companies. PulseCore reserves the right to make changes to this document and its products at any time without notice. PulseCore assumes no responsibility for any errors that may appear in this document. The data contained herein represents PulseCore's best data and/or estimates at the time of issuance. PulseCore reserves the right to change or correct this data at any time, without notice. If the product described herein is under development, significant changes to these specifications are possible. The information in this product data sheet is intended to be general descriptive information for potential customers and users, and is not intended to operate as, or provide, any quarantee or warrantee to any user or customer. PulseCore does not assume any responsibility or liability arising out of the application or use of any product described herein, and disclaims any express or implied warranties related to the sale and/or use of PulseCore products including liability or warranties related to fitness for a particular purpose, merchantability, or infringement of any intellectual property rights, except as express agreed to in PulseCore's Terms and Conditions of Sale (which are available from PulseCore). All sales of PulseCore products are made exclusively according to PulseCore's Terms and Conditions of Sale. The purchase of products from PulseCore does not convey a license under any patent rights, copyrights; mask works rights, trademarks, or any other intellectual property rights of PulseCore or third parties. PulseCore does not authorize its products for use as critical components in life-supporting systems where a malfunction or failure may reasonably be expected to result in significant injury to the user, and the inclusion of PulseCore products in such life-supporting systems implies that the manufacturer assumes all risk of such use and agrees to indemnify PulseCore against all claims arising from such use.
