4-bit up/down binary counter

HEF40193B
MSI

DESCRIPTION

The HEF40193B is a 4-bit synchronous up/down binary counter. The counter has a count-up clock input (CP_U), a count-down clock input (CP_D), an asynchronous parallel load input (\overline{PL}), four parallel data inputs (P_0 to P_3), an asynchronous master reset input (MR), four counter outputs (O_0 to O_3), an active LOW terminal count-up (carry) output (\overline{TC}_U) and an active LOW terminal count-down (borrow) output (\overline{TC}_D).

The counter outputs change state on the LOW to HIGH transition of either clock input. However, for correct counting, both clock inputs cannot be **LOW** simultaneously. The outputs \overline{TC}_U and \overline{TC}_D are normally HIGH. When the circuit has reached the maximum count state of '15', the next HIGH to LOW transition of CP_U will cause \overline{TC}_U to go LOW. \overline{TC}_U will stay LOW until CP_U goes HIGH again. Likewise, output \overline{TC}_D will go LOW when the circuit is in the zero state and CP_D goes LOW. When \overline{PL} is LOW, the information on P_0 to P_3 is asynchronously loaded into the counter. A HIGH on MR resets the counter independent of all other input conditions. The counter stages are of a static toggle type flip-flop.

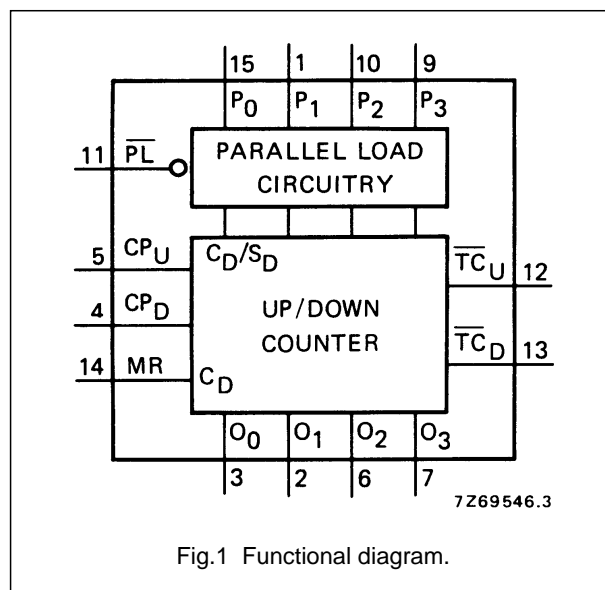

Fig.1 Functional diagram.

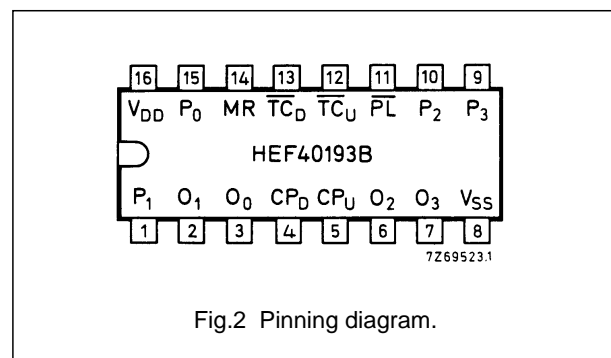

Fig.2 Pinning diagram.

PINNING

\overline{PL}	parallel load input (active LOW)
P_0 to P_3	parallel data inputs
CP_U	count-up clock pulse input (LOW to HIGH, edge-triggered)
CP_D	count-down clock pulse input (LOW to HIGH, edge-triggered)
MR	master reset input (asynchronous)
\overline{TC}_U	buffered terminal count-up (carry) output (active LOW)
\overline{TC}_D	buffered terminal count-down (borrow) output (active LOW)
O_0 to O_3	buffered counter outputs

HEF40193BP(N):	16-lead DIL; plastic (SOT38-1)
HEF40193BD(F):	16-lead DIL; ceramic (cerdip) (SOT74)
HEF40193BT(D):	16-lead SO; plastic (SOT109-1)

FUNCTION TABLE

MR	\overline{PL}	CP _U	CP _D	MODE
H	X	X	X	reset (asyn.)
L	L	X	X	parallel load
L	H		H	count-up
L	H	H		count-down

Notes

- H = HIGH state (the more positive voltage)
L = LOW state (the less positive voltage)
X = state is immaterial

 = positive-going transition

Logic equations for terminal count:

$$\overline{TC}_U = \overline{O_0 \cdot O_1 \cdot O_2 \cdot O_3 \cdot \overline{CP}_U}$$

$$\overline{TC}_D = \overline{\overline{O_0} \cdot \overline{O_1} \cdot \overline{O_2} \cdot \overline{O_3} \cdot \overline{CP}_D}$$

AC CHARACTERISTICS

V_{SS} = 0 V; T_{amb} = 25 °C; input transition times ≤ 20 ns

APPLICATION INFORMATION

Some examples of applications for the HEF40193B are:

- Up/down difference counting
- Multistage ripple counting
- Multistage synchronous counting

Fig.8 Example of cascaded HEF40193B ICs.
