## Description

The XCR3064XL is a 3.3V, 64-macrocell CPLD targeted at power sensitive designs that require leading edge programmable logic solutions. A total of four function blocks provide 1,500 usable gates. Pin-to-pin propagation delays are 6.0 ns with a maximum system frequency of 145 MHz.

## TotalCMOS Design Technique for Fast Zero Power

Xilinx offers a TotalCMOS CPLD, both in process technology and design technique. Xilinx employs a cascade of CMOS gates to implement its sum of products instead of the traditional sense amp approach. This CMOS gate implementation allows Xilinx to offer CPLDs that are both high performance and low power, breaking the paradigm that to have low power, you must have low performance. Refer to [Figure 1](#) and [Table 1](#) showing the  $I_{CC}$  vs. Frequency of our XCR3064XL TotalCMOS CPLD (data taken with four resettable up/down, 16-bit counters at 3.3V, 25°C).
