### DESCRIPTION

AMCC's advanced PLL technology allows the S4505 to provide two Rambus-compatible, 250, 267, or 300 MHz clocks from a low cost 14.318 MHz crystal. Other reference crystals can be used to produce other output frequencies within the 240–310 MHz range. An external series resistor allows the output to be matched to the Rambus transmission line impedance needed for each application.

AMCC utilizes its high speed, low-jitter PLL technology developed for telecom and precision clocking applications to provide outputs which meet the low jitter and symmetrical duty cycle requirements of RAMBUS system clocks.

**Absolute Maximum Ratings**

Parameter	Description	Value	Unit
V <sub>DD</sub>	Power supply vs. GND	-0.5 to +5.0	V
V <sub>IN</sub>	Input voltage, and pin vs. GND	-0.5 to V <sub>DD</sub> +0.5	V
Storage Temp.	Maximum temperature during storage	170°	°C

Note: Stresses greater than the absolute maximum ratings may cause permanent damage to the device. Functional operation of the device at these or any other conditions above those indicated under the normal operating conditions is not guaranteed. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
