#### **Test Method:**

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

- ①Measurement place
  - A place that is nothing of extreme light reflected in the room.
- ②External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface. ( $Ee \le 10Lux$ )

Standard transmitter

A transmitter whose output is so adjusted as to Vo=400mVp-p and the output

Wave form shown in Fig.-1.According to the measurement method shown in

Fig.-2 the standard transmitter is specified.

However, the infrared photodiode to be used for the transmitter should be  $\lambda p=940$ nm,  $\Delta \lambda=50$ nm. Also, photodiode is used of PD438B(Vr=5V).

Measuring system

#### The Notice of Application:

Transmission o remote control signal consist of four parts: Encode Part, IR Transmitter Source, IRM device, Decode Part

- 1. When IRM-36xxD code select frequency, it need to well understand the center system of encode part.
- 2. Strong or weak light of IR Transmitter can affect distance of transmission.
- 3. When using IRM-36xxD device, Minimum Burst Length Tburst (number of pulses per burst): 10 cycles
- 4. It needs to ensure the translation range of decode part if it is applied to the pulse-width range.
- 5. IRM-36xxD can use More Tx Repeat Continuous Codes, but against disturbance slightly weak Repeat Continuous Code Mean:

<sup>\*</sup>Minimum Data Pause Time : < 1msec

If the above items hardly assure of its application, it'll cause NG(no good) message from the edge of signal.
