

## Dual 1A Low Dropout Positive Regulator

### ■ Features

- 1.3V maximum dropout at full load current
- Fast transient response
- Output current limiting for each channel.
- Built-in thermal shutdown each channel.
- Good noise rejection
- Dual output ch1=3.3V, ch2=2.5V  
(1.8V for B version)
- Packages: SOP-8L

### ■ Applications

- PC peripheral
- Communication

### ■ General Description

AP1120 series are low dropout positive regulator with minimum of 1A output current capability. The product is specifically designed to provide well-regulated supply for low voltage IC applications such as high-speed bus termination and low current 3.3V/2.5V or 3.3V/1.8V logic supply. AP1120 series are guaranteed to have <1.3V dropout at full load current making it ideal to provide well regulated outputs dual channels with up to 18V input supply.

### ■ Connection Diagram

### ■ Pin Descriptions

NAME	FUNCTION
GND1/2	Ground
3.3V(Vout1)	The output of the regulator. A minimum of 10uF capacitor ( $0.15\Omega \leq \text{ESR} \leq 20\Omega$ ) must be connected from this pin to ground to insure stability.
2.5V/1.8V (Vout2)	
VIN1/2	The input pin of regulator. Typically a large storage capacitor ( $0.15\Omega \leq \text{ESR} \leq 20\Omega$ ) is connected from this pin to ground.

**Note1:** See thermal regulation specifications for changes in output voltage due to heating effects. Line and load regulation are measured at a constant junction temperature by low duty cycle pulse testing. Load regulation is measured at the output lead = 1/18" from the package.

**Note2:** Line and load regulation are guaranteed up to the maximum power dissipation of 15W. Power dissipation is determined by the input/output differentially and the output current. Guaranteed maximum power dissipation will not be available over the full input/output range.

**Note3:** Quiescent current is defined as the minimum output current that requires maintaining regulation. At 12V input/output differential the device is guaranteed to regulate if the output current is greater than 10mA.

**Note4:** Vout1 and Vout2 are connected to the PCB copper area 5.5mm\*5.5mm separately. If you need large PD or lower Tc & Tj, please connect to the large copper area >> 5.5mm\*5.5mm (like 10mm\*10mm).
