4-bit bidirectional universal shift register

HEF40194B
MSI**DESCRIPTION**

The HEF40194B is a 4-bit bidirectional shift register with two mode control inputs (S_0 and S_1), a clock input (CP), a serial data shift left input (D_{SL}), a serial data shift right input (D_{SR}), four parallel data inputs (P_0 to P_3), an overriding asynchronous master reset input (\overline{MR}), and four buffered parallel outputs (O_0 to O_3). When LOW, \overline{MR} resets all stages and forces O_0 to O_3 LOW, overriding all other input conditions. When \overline{MR} is HIGH, the operation mode is controlled by S_0 and S_1 as shown in the function table.

Serial and parallel operation are edge-triggered on the LOW to HIGH transition of CP. The inputs at which the data are to be entered and S_0 , S_1 must be stable for a set-up time before the LOW to HIGH transition of CP.

PINNING

- S_0 , S_1 mode control inputs
- P_0 to P_3 parallel data inputs
- D_{SR} serial data shift right input
- D_{SL} serial data shift left input
- CP clock input (LOW to HIGH edge-triggered)
- \overline{MR} master reset input (active LOW)
- O_0 to O_3 buffered parallel outputs

parallel load	H	H	X	X	L	L	L	L	L
	H	H	X	X	H	H	H	H	H

Notes

1. H = HIGH state (the more positive voltage)
2. L = LOW state (the less positive voltage)
3. X = state is immaterial
4. t_{n+1} = state after next LOW to HIGH transition of CP
