Dual 4-input multiplexer**HEF4539B
MSI****DESCRIPTION**

The HEF4539B is a dual 4-input multiplexer with common select logic. Each multiplexer has four multiplexer inputs (I_0 and I_3), an active LOW enable input (\bar{E}) and a multiplexer output (O). When HIGH, \bar{E} forces O of the respective multiplexer LOW, independent of the select inputs (S_0 to S_1) and I_0 to I_3 . When \bar{E} is LOW, S_0 and S_1 determine which multiplexer input (I_0 to I_3) on each of the multiplexers is routed to the respective multiplexer output (O).
