## Power Factor Controller

The MC33232 is the monolithic Integrated Circuit using the SMARTMOS® process as the new technology. And is active power factor controller specially design for use as off-line power converter application. This integrated circuit features an internal startup timer for stand-alone application, a one quadrant multiplier for near unity power factor, zero current detector to ensure critical condition operation, transconductance error amplifier, quickstart circuit for enhanced startup, trimmed internal bandgap reference, current sensing comparator, a totem pole output ideally suited for drive a power MOSFET, and a one shot-trigger circuit to eliminate a problem at the light loading.

Also included are protective features consisting of an overvoltage comparator to eliminate runaway output voltage due to removal, and a protect circuit to eliminate thermal runaway. This device is available in dual-in-line and surface mount plastic package.

### Features

- One Shot-trigger Circuit to Eliminate a Problem at the Light Loading
- Overvoltage Comparator Eliminates Runaway Output Voltage
- Quickstart Circuit for Enhanced Startup
- Internal Startup Timer
- One Quadrant Multiplier
- Zero Current Detector
- Trimmed 2% Internal Bandgap Reference
- Totem Pole Output with High State Clamp
- Undervoltage Lockout with 6.0 V of Hysteresis
- Low Startup and Operating Current
- Pb-Free Packages are Available

## PIN FUNCTION DESCRIPTION

Name	Pin No.	Equivalent Circuit	Function
V <sub>FB</sub>	1		<b>Voltage Feedback Input</b> This pin is an input for error amplifier to feedback the voltage from the converter output. Have the overvoltage detect circuit to cut off the drive out when the voltage is over 8% from setting value.
COMP	2		<b>Error Amplifier Output/Compensation</b> This pin is an error amplifier output. Can do phase compensation or gain adjustment by this pin.
Mult	3		<b>Multiplier Input</b> Monitor the AC off line voltage using this input.
CS	4		<b>Current Sense Input</b> Control the output voltage by sensing the overcurrent at each cycle. This pin connects the RC filter and 1.5 V clamp diode.
