2MHz, Ultra-Low Offset Voltage Operational Amplifier

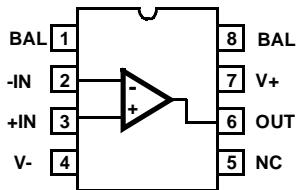

The HA-5177 is an all bipolar, precision operational amplifier, utilizing Harris dielectric isolation and advance processing techniques. This design features a combination of precision input characteristics, wide bandwidth (2MHz) and high speed (0.8V/ μ s).

The HA-5177 uses advanced matching techniques and laser trimming to produce low offset voltage (20 μ V) and low offset voltage drift (0.2 μ V/ $^{\circ}$ C). This design also features low voltage noise (9.0nV/ \sqrt Hz), low current noise (1.2pA/ \sqrt Hz), nanoamp input currents, and 120dB minimum gain.

These outstanding features along with high CMRR (140dB) and high PSRR (135dB) make this unity gain stable amplifier ideal for high resolution data acquisition systems, precision integrators, and low level transducer amplifiers.

The HA-5177 can be used as a direct replacement for the OP05, OP07, and OP77 while offering higher bandwidth and slew rate. See the HA-5177/883 data sheet for military grade parts and LCC package.

HA-5177
(PDIP, CERDIP)
TOP VIEW

Features

- Low Offset Voltage 20 μ V
- Low Offset Voltage Drift 0.2 μ V/ $^{\circ}$ C
- High Voltage Gain 150dB
- High CMRR 140dB
- High PSRR 135dB
- Low Noise 9.0nV/ \sqrt Hz
- Low Power Consumption 51mW (Max)

Applications

- High Gain Instrumentation Amplifiers
- Precision Control Systems
- Precision Integrators
- High Resolution Data Converters
- Precision Threshold Detectors
- Low Level Transducer Amplifiers

Part Number Information

PART NUMBER	TEMP. RANGE ($^{\circ}$ C)	PACKAGE	PKG. NO.
HA3-5177-5	0 to 75	8 Ld PDIP	E8.3
HA7-5177-5	0 to 75	8 Ld CERDIP	F8.3A

Absolute Maximum Ratings

Supply Voltage Between V+ and V- Terminals	44V
Differential Input Voltage	7V
Output Current	Short Circuit Protected

Operating Conditions

Temperature Range	
HA-5177-2	-55°C to 125°C
HA-5177-5	0°C to 75°C

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTE:

1. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Electrical Specifications $V_{SUPPLY} = \pm 15V$, Unless Otherwise Specified

PARAMETER	TEST CONDITIONS	TEMP. (°C)	MIN	TYP	MAX	UNITS
INPUT CHARACTERISTICS

NOTES:

2. V_{OUT} = ±10V, R_L = 2kΩ.
3. ΔV_{CM} = ±10V.
4. R_L = 2kΩ.
5. Full power bandwidth guaranteed based on slew rate measurement using: FPPW = $\frac{\text{Slew Rate}}{2\pi V_{\text{PEAK}}}$; V_{PEAK} = 10V.
6. V_{OUT} = ±10V.
7. Refer to test circuits section of the data sheet.
8. Settling time is measured to 0.1% of final value for a 10V output step and A_V = +1.
9. ΔV_{SUPPLY} = ±10V to ±20V.
10. A_V = 1, R_L = 2kΩ, V_{OUT} = ±200mV.
11. A_V = 1, R_L = 2kΩ, V_{OUT} = 0 to ±3V.

Test Circuits and Waveforms

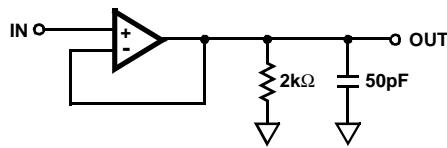

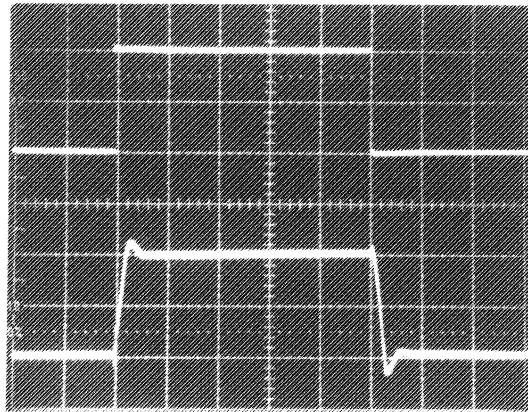

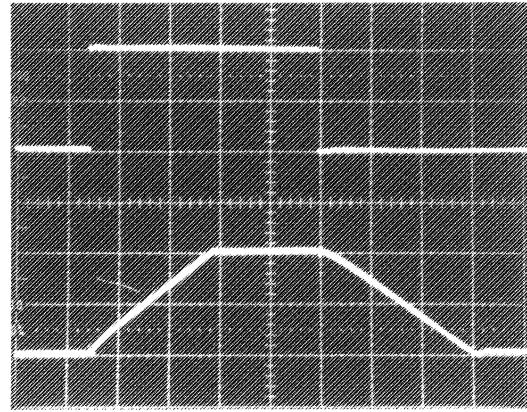

FIGURE 1. SLEW RATE AND TRANSIENT RESPONSE TEST CIRCUIT

Schematic Diagram

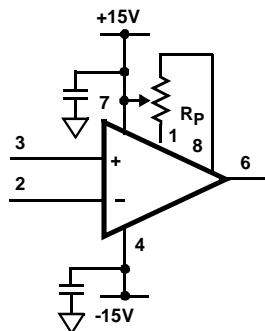

Typical Applications

Operation Below 15V Supply

The HA-5177 performs well down to $\pm 5V$ supplies. At $\pm 5V$ supplies there is a slight degradation of slew rate and open loop gain. There is very little change in bias currents and offset voltage.

Offset Adjustment

The following is the recommended V_{IO} adjust configuration:

Setting $R_P = 20K$ will give an adjustment range of $\pm 2.6mV$.

Input Protection

Typical Performance Curves $V_{SUPPLY} = \pm 15V$, $T_A = 25^{\circ}\text{C}$

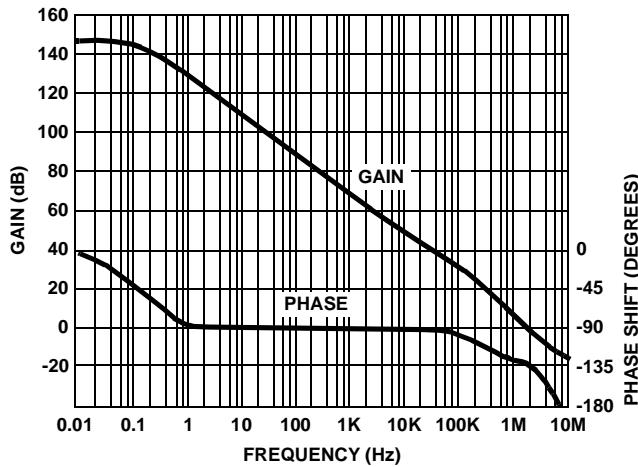

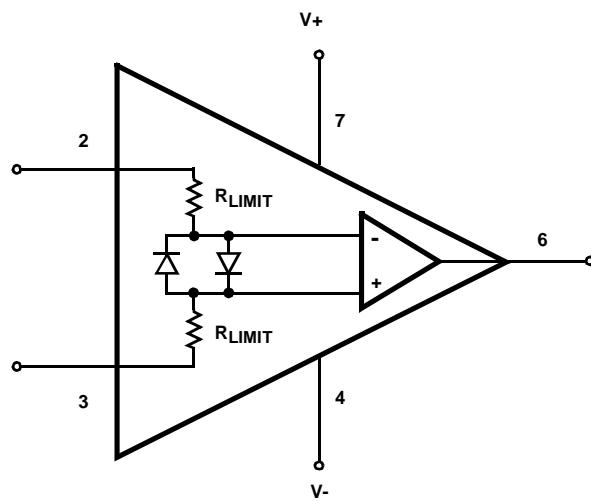

FIGURE 5. OPEN LOOP GAIN AND PHASE vs FREQUENCY

The HA-5177 input stage has built in back-to-back protection diodes with series current limiting resistors.

The Bias currents will increase when a differential voltage of 0.7V is exceeded.

The internal current limiting resistors sufficiently limit current therefore, no external resistors are required.

Refer to the "Bias Current vs Differential Input Voltage" curve in the Typical Performance Curves.
