

300MHz Low Noise Amplifiers

The EL5130 and EL5131 are ultra-low voltage noise, high speed voltage feedback amplifiers that are ideal for applications requiring low voltage noise, including communications and imaging. These devices offer extremely low power consumption for exceptional noise performance. Stable at gains as low as 5, these devices offer 100mA of drive performance. Not only do these devices find perfect application in high gain applications, they maintain their performance down to lower gain settings.

These amplifiers are available in small package options (SOT-23) as well as the industry-standard SO packages. All parts are specified for operation over the -40°C to +85°C temperature range.

NOTE: Intersil Pb-free plus anneal products employ special Pb-free material sets; molding compounds/die attach materials and 100% matte tin plate termination finish, which are RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.

Features

- 300MHz -3dB bandwidth
- Ultra low noise = 1.8nV/√Hz
- 350V/μs slew rate
- Low supply current = 4mA
- Single supplies from 5V to 12V
- Dual supplies from ±2.5V to ±6V
- Fast disable on the EL5130
- Low cost
- Pb-free plus anneal available (RoHS compliant)

Applications

- Imaging
- Instrumentation
- Communications devices
