1024K × 8 bit

## Overview

The N08L083WC2C is an integrated memory device containing a 8 Mbit Static Random Access Memory organized as 1,048,576 words by 8 bits. The device is designed and fabricated using NanoAmp's advanced CMOS technology to provide both high-speed performance and ultra-low power. The device operates with two chip enable ( $\overline{CE1}$  and  $\overline{CE2}$ ) controls and output enable ( $\overline{OE}$ ) to allow for easy memory expansion. The N08L083WC2C is optimal for various applications where low-power is critical such as battery backup and hand-held devices. The device can operate over a very wide temperature range of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  and is available in JEDEC standard packages compatible with other standard 512Kb x 16 SRAMs
