

## General Description

The LM2574 family is a series of easy to use fixed and adjustable switching voltage regulators. The LM2574 contains all of the active circuitry necessary to construct a stepdown (buck) switching regulator and requires a minimum of external components.
The LM2574 is available in 3.3 V and 5 V fixed output versions, or an adjustable version with an output voltage range of 1.23 V to 37 V . Output voltage is guaranteed to $\pm 4 \%$ for specified input and load conditions.
The LM 2574 can supply 0.5 A while maintaining excellent line and load regulation. The output switch includes cycle-bycycle current limiting, as well as thermal shutdown for full protection under fault conditions.
An external shutdown connection selects operating or standby modes. Standby current is less than $200 \mu \mathrm{~A}$.
Heat sinks are generally unnecessary due the regulator's high efficiency. Adequate heat transfer is usually provided by soldering all package pins to a printed circuit board.
The LM2574 includes internal frequency compensation and an internal 52 kHz fixed frequency oscillator guaranteed to $\pm 10 \%$ of the frequency.
Circuits constructed around the LM2574 use a standard series of inductors which are available from several different manufacturers.
All support documentation can be found on Micrel's web site at www.micrel.com.

## Features

- $3.3 \mathrm{~V}, 5 \mathrm{~V}, 12 \mathrm{~V}$, and adjustable output versions
- Adjustable version output 1.23 V to $37 \mathrm{~V} \pm 4 \%$ max. over line and load conditions.
- Guaranteed 0.5 A output current
- Wide input voltage, up to 40 V
- Thermal shutdown and current limit protection
- Requires only 4 external components.
- Shutdown capability (standby mode)
- Low power standby mode < 200 $\mu \mathrm{A}$ Typical
- High-efficiency
- 52 kHz fixed frequency internal oscillator
- Uses standard inductors

## Applications

- Simple high-efficiency step-down (buck) regulator
- Efficient pre-regulator for linear regulators
- On-card switching regulators
- Positive to negative converter (buck-boost)

## Ordering Information

| Part Number | Junction Temp. Range | Package |
| :--- | :---: | :---: |
| LM2574BN | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 8-pin Plastic DIP |
| LM2574-3.3BN | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 8-pin Plastic DIP |
| LM2574-5.0BN | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 8-pin Plastic DIP |

## Typical Application

## Notes:

1. "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur. "Operating Ratings" indicate for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see "Electrical Characteristics."
2. All limits guaranteed at room temperature (standard type face) and at temperature extremes (bold type face). All room temperature limits are $100 \%$ production tested. All limits at temperature extremes are guaranteed via testing.
3. External components such as the catch diode, inductor, input and output capacitors can affect switching regulator system performance. When the LM2574 is used as shown in Figure 1 test circuit, system performance will be shown in system parameters section of "Electrical Characteristics."

Notes:
4. Output (pin 2) sourcing current. No diode, inductor, or capacitor connected to input.
5. Feedback (pin 4) removed from output and connected to OV.
6. Feedback (pin 4) removed from output and connected to 12 V to force the output transistor OFF.
7. Junction-to-ambient thermal resistance with approximately 1 square inches of PC board copper surrounding the leads.
