National Semiconductor

9301/DM9301
1-of-10 Decoders

General Description

These BCD-to-decimal decoders consist of eight inverters and ten 4-input NAND gates. The inverters are connected in pairs to make BCD input data available for decoding by the NAND gates. Full decoding of valid input logic ensures that all outputs remain "OFF" for all invalid input conditions.

These circuits provide familiar TTL inputs and outputs which are compatible for use with other TTL and DTL circuits. DC noise margins are typically 1V and power dissipation is typically 125 mW. The diode-clamped, buffered inputs represent only one normalized Series 54/74 load.

Features

- Direct replacement for Signetics 8252
- Diode-clamped inputs
- All outputs are high for invalid BCD input conditions
- Typical power dissipation 125 mW
- Typical propagation delay 20 ns

Absolute Maximum Ratings (Note)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range	
Military	−55°C to +125°C
Commercial	0°C to 70°C
Storage Temperature Range	−65°C to +150°C

Note: *The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.*
