

DM93L14 Quad Latch

General Description

The DM93L14 is a multifunctional 4-bit latch designed for general purpose storage applications in high speed digital systems. All outputs have active pull-up circuitry to provide high capacitance drive and to provide low impedance in both logic states for good noise immunity.

Features

- Can be used as single input D latches or set/reset latches
- Active low enable gate input
- Overriding master reset

Ordering Code:

Pin Descriptions

Pin Names	Description
\bar{E}	Enable Input (Active LOW)
D0 – D3	Data Inputs
$\bar{S}0 - \bar{S}3$	Set Inputs (Active LOW)
\bar{MR}	Master Reset Input (Active LOW)
Q0 – Q3	Latch Outputs

Functional Description

The DM93L14 consists of four latches with a common active LOW Enable input and active LOW Master Reset input. When the Enable goes HIGH, data present in the latches is stored and the state of the latch is no longer affected by the S_n and D_n inputs. The Master Reset when activated overrides all other input conditions forcing all latch outputs LOW. Each of the four latches can be operated in one of two modes:

D-TYPE LATCH—For D-type operation the \bar{S} input of a latch is held LOW. While the common Enable is active the latch output follows the D input. Information present at the latch output is stored in the latch when the Enable goes HIGH.

SET/RESET LATCH—During set/reset operation when the common Enable is LOW a latch is reset by a LOW on the D input, and can be set by a LOW on the \bar{S} input if the D input is HIGH. If both \bar{S} and D inputs are LOW, the D input will dominate and the latch will be reset. When the Enable goes HIGH, the latch remains in the last state prior to disablement. The two modes of latch operation are shown in the Truth Table.

Absolute Maximum Ratings(Note 1)

Supply Voltage	7V
Input Voltage	5.5V
Operating Free Air Temperature Range	0°C to +70°C
Storage Temperature Range	-65°C to +150°C

Note 1: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The Recommended Operating Conditions table will define the conditions for actual device operation.
