

### General Description

The SY84113BU low power limiting post amplifier is designed for use in fiber-optic optical modules for multirate applications up to 1.25Gbps. The device connects to a typical transimpedance amplifier (TIA) and can produce output signals to CML-level waveforms. Intended for the GbE and Fibre Channel applications, the SY84113BU offers a wide LOS range. It is able to detect input signals for as low as 5mVpp and as high as 100mVpp. The SY84113BU is intended to be used in AC-coupled input applications.

The SY84113BU generates a Loss-of-Signal (LOS) open-collector TTL output. A programmable Loss-of-Signal level set pin ( $LOS_{LVL}$ ) sets the sensitivity of the input amplitude detection. LOS asserts high if the input amplitude falls below the threshold set by  $LOS_{LVL}$  and de-asserts low otherwise. The enable input (/EN) de-asserts the true output signal without removing the input signal. The LOS output can be fed back to the /EN input to implement the squelch function that maintains output stability under a loss-of-signal condition.

The SY84113BU operates on a single 2.5V power supply and offers ultra low power consumption. This device is perfectly suited to meet the stringent power requirements of the CSFP/SFP/SFF optical modules.

All support documentation can be found on Micrel's web site at: [www.micrel.com](http://www.micrel.com).

### Features

- Ultra wide LOS Range (5mVpp to 100mVpp)
- Single 2.5V power supply
- Ultra low power consumption (55mW typ)
- 125Mbps to 1.25 Gbps operation
- Low-noise CML data outputs
- TTL /EN input
- Programmable LOS level ( $LOS_{LVL}$ )
- Internal 50Ohm termination
- Available in a tiny 3mm x 3mm QFN package

### Applications

- Gigabit Ethernet
- Fibre Channel
- GEAPON

### Markets

- Datacom/telecom
- Compact SFP/SFF Optical transceiver
- SFP/SFF Optical transceiver

### Typical Application

### Ordering Information

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY84113BUMG	QFN-16	Industrial	113B with Pb-Free bar line indicator	NiPdAu Pb-Free
SY84113BUMGTR <sup>(1)</sup>	QFN-16	Industrial	113B with Pb-Free bar line indicator	NiPdAu Pb-Free

**Notes:**

1. Tape and Reel.

### Pin Configuration

16-Pin (3mm x 3mm) QFN-16

### Pin Description

Pin Number	Pin Name	Type	Pin Function
15	/EN	TTL Input	/Enable: This input enables the outputs when LOW. Internally connected to a 25kΩ pull-up resistor and will default to a logic HIGH state if left open.
1, 4	DIN, /DIN	Data Input	Differential data inputs. Each input is internally terminated to the VREF pin by a 50Ω resistor.
6	VREF		Reference Voltage: Place 0.1uF capacitor to Vcc to help stabilize LOSLVL
14	LOSLVL	DC Input	Loss-of-Signal Level Set. A resistor from this pin to V <sub>CC</sub> sets the threshold for the data input amplitude at which LOS will be asserted.
2, 3, 10, 11, EPAD	GND	Ground	Device ground. Exposed pad must be connected to PCB ground plane.
7	LOS	Open-collector TTL output	Loss-of-Signal: asserts high when the data input amplitude falls below the threshold set by LOS <sub>LVL</sub> .
12, 9	/DOUT, DOUT	CML Output	Differential data outputs. Unused output should be terminated 50Ω to VCC.
5, 8, 13, 16	VCC	Positive Rail	Positive power supply. . Bypass with a 0.1uF    0.01uF low ESR capacitor as close to VCC pin as possible.

**Absolute Maximum Ratings<sup>(1)</sup>**

Supply Voltage ( $V_{CC}$ )	0V to +4.0V
Input Voltage (DIN, /DIN)	0 to $V_{CC}$
Output Current ( $I_{OUT}$ )	$\pm 25$ mA
EN Voltage	0 to $V_{CC}$
$V_{REF}$ Current	-800 $\mu$ A to +500 $\mu$ A
$LOS_{LVL}$ Voltage	$V_{REF}$ to $V_{CC}$
Lead Temperature (soldering, 20sec.)	260°C
Storage Temperature ( $T_s$ )	-65°C to +150°C

**Operating Ratings<sup>(2)</sup>**

Supply Voltage ( $V_{CC}$ )	+2.375 to +2.625V
Ambient Temperature ( $T_A$ )	-40°C to +85°C
Junction Temperature ( $T_J$ )	-40°C to +120°C
Package Thermal Resistance <sup>(3)</sup>	
( $\theta_{JA}$ ) Still-air	60°C/W
( $\psi_{JB}$ )	33°C/W

**DC Electrical Characteristics**

$V_{CC} = 2.5 \pm 5\%$ ;  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , typical values at  $V_{CC} = 2.5\text{V}$ ,  $T_A = 25^\circ\text{C}$ .

Symbol	Parameter	Condition	Min	Typ	Max	Units
$I_{CC}$	Power Supply Current	Outputs terminated 50Ohm to Vcc		22	35	mA
$LOS_{LVL}$	$LOS_{LVL}$ Voltage		$V_{REF}$		$V_{CC}$	V
$V_{OH}$	DOUT, /DOUT HIGH Voltage		$V_{CC}-0.020$	$V_{CC}-0.005$	$V_{CC}$	V
$V_{OL}$	DOUT, /DOUT LOW Voltage		$V_{CC}-0.475$	$V_{CC}-0.400$	$V_{CC}-0.350$	V
$V_{REF}$	Reference Voltage			$V_{CC} - 0.6$		V
$Z_0$	Single-Ended Output Impedance		40	50	60	$\Omega$
$Z_I$	Single-Ended Input Impedance		40	50	60	$\Omega$

**TTL DC Electrical Characteristics**

$V_{CC} = 2.5 \pm 5\%$ ;  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , typical values at  $V_{CC} = 2.5\text{V}$ ,  $T_A = 25^\circ\text{C}$ .

Symbol	Parameter	Condition	Min	Typ	Max	Units
$V_{IH}$	/EN Input HIGH Voltage		2.0		$V_{CC}$	V
$V_{IL}$	/EN Input LOW Voltage				0.8	V
$I_{IH}$	/EN Input HIGH Current	$V_{IN} = V_{CC}$			20	$\mu$ A
$I_{IL}$	/EN Input LOW Current	$V_{IN} = 0.5\text{V}$	-0.3			mA
$V_{OH}$	LOS Output HIGH Level	$V_{CC} = 2.5\text{V}$ . $I_{OH} < 50\mu\text{A}$	2			V
$V_{OL}$	LOS Output LOW Level	$I_{OL} = 2\text{mA}$			0.5	V

## AC Electrical Characteristics

$V_{CC} = 2.5 \pm 5\%$ ;  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , typical values at  $V_{CC} = 2.5\text{V}$ ,  $T_A = 25^\circ\text{C}$ .;  $R_{Load} = 50\Omega$  to  $V_{CC}$ ;

$A_{V(Diff)}$	Differential Voltage Gain			38		dB
$S_{21}$	Single-Ended Small-Signal Gain		26	32		dB

### Notes:

- Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.
- The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
- Package Thermal Resistance assumes exposed pad is soldered (or equivalent) to the devices most negative potential on the PCB.  $\psi_{JB}$  uses a 4-layer and  $\theta_{JA}$  in still air unless otherwise stated.
- Amplifier in limiting mode. Input is a 200MHz square wave.
- Deterministic jitter measured using 1.250 Gbps K28.5 pattern,  $V_{ID} = 60\text{mV}_{PP}$ .
- Random jitter measured using 1.250Gbps K28.7 pattern,  $V_{ID} = 60\text{mV}_{PP}$ .
- See "Typical Operating Characteristics" for a graph showing how to choose a particular  $R_{LOSLVL}$  for a particular LOS assert and its associated de-assert amplitude.
- This specification defines electrical hysteresis as 20log (LOS De-Assert/LOS Assert). The ratio between optical hysteresis and electrical hysteresis is found to vary between 1.5 and 2 depending upon the level of received optical power and ROSA characteristics. Based on that ratio, the optical hysteresis corresponding to the electrical hysteresis range 2dB-4.5 dB, shown in the AC characteristics table, will be 1dB-3dB Optical Hysteresis.
- In real world applications, the LOS Release/Assert time can be strongly influenced by the RC time constant of the AC-coupling cap and the 50 $\Omega$  input termination. To keep this time low, use a decoupling cap with the lowest value that is allowed by the data rate and the number of consecutive identical bits in the application (typical values are in the range of 0.001 $\mu\text{F}$  to 1.0 $\mu\text{F}$ ).

### Typical Functional Characteristics

$V_{CC} = 2.5 \pm 5\%$ ;  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , typical values at  $V_{CC} = 2.5\text{V}$ ,  $T_A = 25^\circ\text{C}$ .;  $R_{Load} = 50\Omega$  to  $V_{CC}$ ;

### Typical Operating Characteristics

$V_{CC} = 2.5 \pm 5\%$ ;  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , typical values at  $V_{CC} = 2.5\text{V}$ ,  $T_A = 25^\circ\text{C}$ .;  $R_{Load} = 50\Omega$  to  $V_{CC}$ ;

## Functional Block Diagram

## Detailed Description

The SY84113BU is a high-sensitivity limiting post amplifier that operates from a single +2.5V power supply over temperatures from  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . Signals with data rates up to 1.25Gbps, and as small as 5mVpp, can be amplified. Figure 1 shows the allowed input voltage swing. The SY84113BU generates a LOS output signal that can be fed back to /EN for output stability in the absence of a signal at the input.  $\text{LOS}_{\text{LVL}}$  sets the sensitivity of the input amplitude detection. SY84113BU offers ultra wide LOS detection range. This allows the device to be used in multiple AC-coupled applications.

### Input Amplifier/Buffer

Figure 2 shows a simplified schematic of the input stage. The high-sensitivity of the input amplifier can detect and amplify AC-coupled signals as small as 5mV<sub>pp</sub> to full CML output level. The input stage also can allow signals as large as 1800mV<sub>pp</sub>. Input signals are amplified with a typically 38dB differential voltage gain until they reach the limiting mode of the amplifier. SY84113BU outputs in standard 400mV CML output levels.

### Output Buffer

The SY84113BU's CML output buffer is designed to drive 50Ω lines and is internally terminated with 50Ω to VCC. Figure 3 shows a schematic of the output stage.

### Loss-of-Signal

The SY84113BU generates a chatter-free loss-of-signal (LOS) open-collector TTL output as shown in Figure 4. LOS is used to determine that the input amplitude is too small to be considered as a valid input. LOS asserts high if the input amplitude falls below the threshold set by  $\text{LOSLVL}$  and de-asserts low otherwise. LOS can be fed back to the enable (/EN) input to maintain output stability under a loss of signal condition. /EN de-asserts low the true output signal without removing the input signals. Typically, 3dB LOS hysteresis is provided to prevent chattering.

### Loss-of-Signal-Level Set

A programmable LOS level set pin ( $\text{LOS}_{\text{LVL}}$ ) sets the threshold of the input amplitude detection. Connecting an external resistor between VCC and  $\text{LOSLVL}$  sets the voltage at  $\text{LOSLVL}$ . This voltage ranges from VCC to VREF. The external resistor creates a voltage divider between VCC and VREF, as shown in Figure 5.

### Hysteresis

The SY84113BU provides typically 3dB LOS electrical hysteresis, which is defined as  $20\log(V_{\text{IN}_{\text{LOS-Assert}}} / V_{\text{IN}_{\text{LOS-De-Assert}}})$ . Since the relationship between the voltage out of the ROSA to optical power at its input is linear, the optical hysteresis will be typically half of the electrical hysteresis reported in the datasheet, but in practice the ratio between electrical and optical hysteresis is found to be within the range 1.5-1.8. Thus 3dB electrical hysteresis will correspond to an optical hysteresis within the range 1.7dB - 2dB.
