## lamp and relay drivers

## Protected control circuit for industrial equipments

- Power switching required by relays or lamps (0.5 A
- Protection of drive circuits while it is itself also protected against output short-circuits.
- Efficiently monitoring of system operation by alarm signal outputs.
- Restart equipment after any fault condition, thanks to the availability of reset input.
- I/O interface.

## RELAY AND LAMP DRIVERS ( $T_{amb} = +25^{\circ}$ C)
