

# **IPS1041(L)(R)PbF / IPS1042GPbF**

## **SINGLE/DUAL CHANNEL INTELLIGENT POWER LOW SIDE SWITCH**

### **Features**

- Over temperature shutdown
- Over current shutdown
- Active clamp
- Low current & logic level input
- ESD protection
- Optimized Turn On/Off for EMI
- Diagnostic on the input current

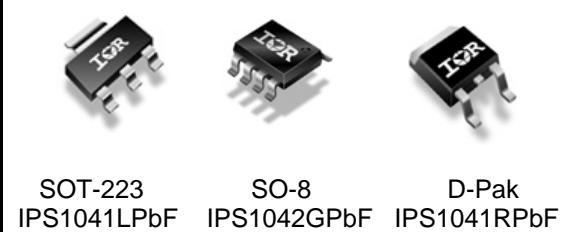

### **Product Summary**

|           |              |
|-----------|--------------|
| Rds(on)   | 100mΩ (max.) |
| Vclamp    | 39V          |
| Ishutdown | 4.5A (typ.)  |

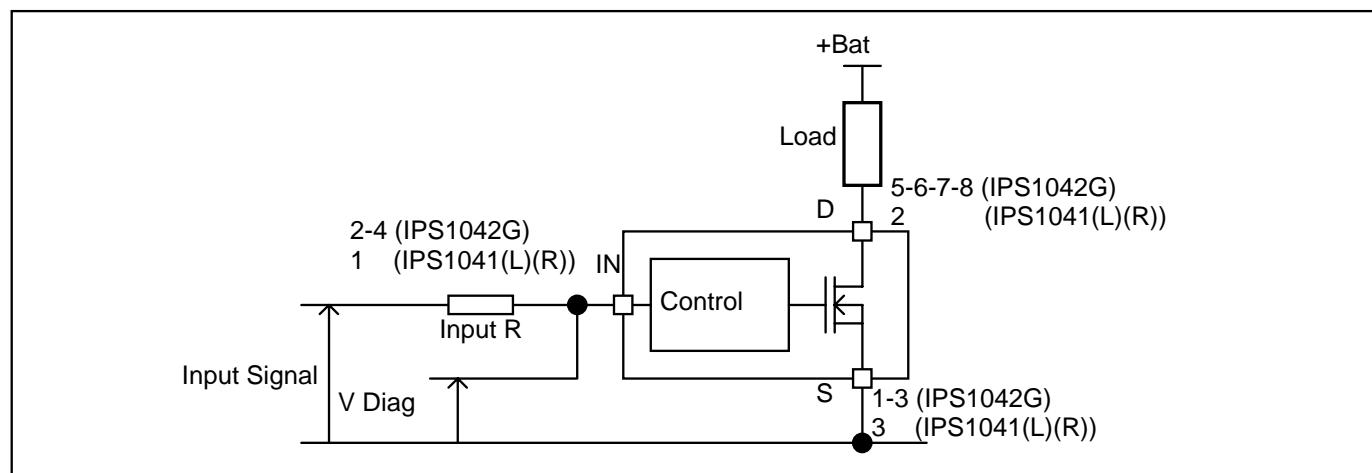

### **Description**

The IPS1041(L)(R)PbF and IPS1042GPbF are three terminal Intelligent Power Switches (IPS) featuring low side MOSFETs with over-current, over-temperature, ESD protection and drain to source active clamp. The IPS1042G is a dual channel device while the IPS1041 is a single channel. These devices offer protections and the high reliability required in harsh environments. Each switch provides efficient protection by turning OFF the power MOSFET when the temperature exceeds 165°C or when the drain current reaches 4.5A. The device restarts once the input is cycled. A serial resistance connected to the input provides the diagnostic. The avalanche capability is significantly enhanced by the active clamp and covers most inductive load demagnetizations.
