ZXRE250/ZXRE252

VERY LOW CATHODE CURRENT ADJUSTABLE PRECISION SHUNT REGULATOR

NEW PRODUCT

Description

The ZXRE250 and ZXRE252 are three terminal adjustable shunt regulators offering excellent temperature stability and output current handling capability up to 100mA. The output voltage may be set to any chosen voltage between 2.5 and 36 volts by selection of two external divider resistors.

ZXRE250 has the same electrical specifications as the industry standard '431 except that it features a very low minimum cathode current for regulation. The typical value of 40µA makes the parts ideal for very low power applications.

The devices can be used as a replacement for zener diodes in many applications requiring an improvement in zener performance. The ZXRE250/2 is available in 2 grades with initial tolerances of 1% and 0.5% for the A and B grades respectively.

Features

- Minimum cathode current for regulation: 40µA (typ)
- Temperature range -40 to 125ºC
- Reference Voltage Tolerance at 25°C
  - o ZXRE250A: 2.495V ± 1.0%.
  - o ZXRE250B: 2.495V ± 0.5%
- Low Output Noise
- 0.2Ω Typical Output Impedance
- Sink Current Capability: 0.065mA to 100mA
- Adjustable Output Voltage: V_{REF} to 36V
- SOT23 and SOT25: Available in "Green" Molding Compound (No Br, Sb) and Lead Free Finish/ RoHS Compliant (Note 1)

Applications

- Opto-Coupler Linearisers
- Shunt Regulators
- Improved Zener
- Variable Reference

NEW PRODUCT

Absolute Maximum Ratings (Note 2)

Symbol	Parameter		Rating	Unit
V_{KA}	Cathode Voltage		40	V
I_{KA}	Continuous Cathode Current		150	mA
I_{REF}	Reference Input Current		-0.050 to +10	mA
T_J	Operating Junction Temperature		+150	°C
T_{ST}	Storage Temperature		-55 to +150	°C
P_D	Power Dissipation (Notes 3, 4)	SOT23	330	mW
		SOT25	500	mW

Notes:
2. Operation above the absolute maximum rating may cause device failure. Operation at the absolute maximum ratings, for extended periods, may reduce device reliability. Unless otherwise stated voltages specified are relative to the ANODE pin.
3. T_J, max =150°C.
4. Ratings apply to ambient temperature at 25°C.

Recommended Operating Conditions

Symbol	Parameter	Min	Max	Unit
V_{KA}	Cathode Voltage	V_{REF}	36	V
I_{KA}	Cathode Current	0.065	100	mA
T_A	Operating Ambient Temperature	-40	125	°C

NEW PRODUCT

Electrical Characteristics (T_A = +25°C, unless otherwise noted)

Symbol	Parameter	Test Conditions		Min	Typ.	Max	Unit
V_{REF}	Reference voltage	$V_{KA} = V_{REF}$, I_{KA} = 10mA	ZXRE250A	2.470	2.495	2.520	V
			ZXRE250B	2.482	2.495	2.507	V
V_{DEV}	Deviation of reference voltage over full temperature range (Note 5)	$V_{KA} = V_{REF}$, I_{KA} = 10mA	T_A = 0 to 70 °C		6	16	mV
			T_A = -40 to 85 °C		14	34	mV
			T_A = -40 to 125 °C		14	34	mV
$\frac{\Delta V_{REF}}{\Delta V_{KA}}$	Ratio of the change in reference voltage to the change in cathode voltage	I_{KA} = 10mA	V_{KA} = 10V to V_{REF}		-1.4	-2.7	mV/V
			V_{KA} = 36V to 10V		-1	-2	mV/V
I_{REF}	Reference input current	I_{KA} = 10mA, R1 = 10KΩ, R2 = ∞			1	4	µA
ΔI_{REF}	I_{REF} deviation over full temperature range (Note 5)	I_{KA} = 10mA, R1 = 10KΩ, R2 = ∞	T_A = 0 to 70 °C		0.8	1.2	µA
			T_A = -40 to 85 °C		0.8	2.5	µA
			T_A = -40 to 125 °C		0.8	2.5	µA
$I_{KA(MIN)}$	Minimum cathode current for regulation	$V_{KA} = V_{REF}$			40	65	µA
$I_{KA(OFF)}$	Off-state current	V_{KA} = 36V, V_{REF} = 0V			0.05	0.5	µA
$\lvert Z_{KA} \rvert$	Dynamic output impedance (Note 6)	$V_{KA} = V_{REF}$, f = 0Hz			0.2	0.5	Ω
θ_{JA}	Thermal Resistance Junction to Ambient	SOT23			380		°C/W
		SOT25			250		°C/W

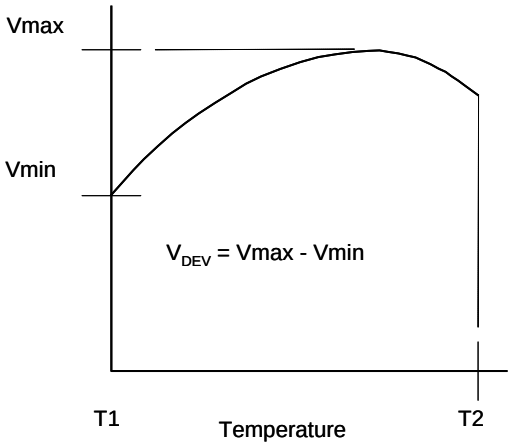
Notes: 5. Deviation of V_{DEV}, and ΔI_{REF} are defined as the maximum variation of the values over the full temperature range.

The average temperature coefficient of the reference input voltage αV_{REF} is defined as:

$$\lvert \alpha V_{REF} \rvert = \frac{\left(\frac{V_{DEV}}{V_{REF} @ 25^{o}C} \right) X\ 10^{6}}{T2 - T1} \quad ppm/^{o}C$$

Where:
T2 – T1 = full temperature change.

αV_{REF} can be positive or negative depending on whether the slope is positive or negative.



Notes: 6. The dynamic output impedance, R_Z, is defined as:

$$\lvert Z_{KA} \rvert = \frac{\Delta V_{KA}}{\Delta I_{KA}}$$

When the device is programmed with two external resistors R1 and R2, the dynamic output impedance of the overall circuit, is defined as:

$$\lvert Z' \rvert = \frac{\Delta V}{\Delta I} \approx \lvert Z_{KA} \rvert \left(1 + \frac{R1}{R2} \right)$$

Diodes Incorporated and its subsidiaries reserve the right to make modifications, enhancements, improvements, corrections or other changes without further notice to this document and any product described herein. Diodes Incorporated does not assume any liability arising out of the application or use of this document or any product described herein; neither does Diodes Incorporated convey any license under its patent or trademark rights, nor the rights of others. Any Customer or user of this document or products described herein in such applications shall assume all risks of such use and will agree to hold Diodes Incorporated and all the companies whose products are represented on Diodes Incorporated website, harmless against all damages.

Diodes Incorporated does not warrant or accept any liability whatsoever in respect of any products purchased through unauthorized sales channel.
Should Customers purchase or use Diodes Incorporated products for any unintended or unauthorized application, Customers shall indemnify and hold Diodes Incorporated and its representatives harmless against all claims, damages, expenses, and attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized application.

Products described herein may be covered by one or more United States, international or foreign patents pending. Product names and markings noted herein may also be covered by one or more United States, international or foreign trademarks.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
