

General Description

The ILC7010 is an 80mA, Ultra Low Noise, Low Dropout (LDO) linear regulator, designed and processed in Impala's proprietary CMOS process technology. This process combines the best CMOS features of low quiescent current, small size and low dropout voltage with the best bipolar features of high ripple rejection, ultra low noise and power handling capability. The ILC7010 offers a quiescent current of less than 100mA, a logic level enable (regulator on/off) pin, a footprint that is half the size of the industry standard SOT-23, and a low dropout voltage of 50mV at 10mA. With better than 70dB (1kHz) of ripple rejection, ultra low noise of $20\mu\text{V}_{\text{RMS}}$ and 1% output voltage accuracy, the ILC7010 sets a new standard in linear regulators for communications and personal electronics applications.

The ILC7010 is designed to operate with small, low cost ceramic capacitors and is stable over a wide range of ESR values. In addition to the output capacitor, the ILC7010 requires only a $1\mu\text{F}$ input capacitor. The enable pin can be tied to V_{IN} for easy device layout. The ILC7010 is available in a number of fixed output voltages ranging from 2.5V to 8V. An adjustable version will be available shortly. For competitive replacements, the ILC7080 is available in a variety of pinout options in a SOT-23 package. The ILC7080 offers the same operating characteristics and features as the ILC7010

The ILC7010 is ideally suited for use in small size cordless and cellular handsets as well as many other low battery powered electronic devices. Please contact Impala for samples and application information.

Features

- 1% output voltage accuracy
- Only $20\mu\text{V}_{\text{RMS}}$ noise @ 10kHz
- Uses low ESR ceramic or tantalum output capacitor to minimize noise and output ripple
- Only $90\mu\text{A}$ ground current at 80mA load
- Ripple rejection up to 70dB at 1kHz, 60dB at 1MHz
- Excellent line and transient response
- Guaranteed to 80mA output current
- Industry standard five lead SC70 packages
- Fixed 2.8V, 3.0V, 3.3V, 3.6V, 4.7V, 5.0V and adjustable output voltage options
- Metal mask option available for custom voltages between 2.5V and 10V

Applications

- Cellular phones
- Wireless communicators
- PDAs / palmtops / organizers
- Battery powered portable electronics

Pin Description ILC7010 (fixed voltage version)

Pin Description	Pin Name	Pin Description
1	ON/OFF	Shutdown
2	N/C	
3	GND	Ground pin. Local ground for C _{OUT}
4	V _{OUT}	Output voltage. Connect C _{OUT} between this pin and the GND (pin 3)
5	V _{IN}	Connect Directly to Supply

Note 1: Absolute maximum ratings indicate limits which when exceeded may result in damage to the component. Electrical specifications do not apply when operating the device outside of its rated operating conditions.

Note 2: Specified Min/Max limits are production tested or guaranteed through correlation based on statistical control methods. Measurements are taken at constant junction temperature as close to ambient as possible using low duty pulse testing.

Note 3: Dropout voltage is defined as the input to output differential voltage at which the output voltage drops 2% below the nominal value measured with a 1V differential.

Note 4: Guaranteed by design

Note 5: The device's shutdown pin includes a 2M Ω internal pull down resistor connected to ground.

Life Support Policy

Impala Linear Corporation's products are not authorized for use as critical components in life support devices or systems.

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labelling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
