Dynamic Random Access Memory

DESCRIPTION

The Accutek AK5322048W high density memory module is a CMOS dynamic RAM organized in 2048 x 32 bit words. The module consists of sixteen standard 1 Meg x 4 DRAMs in plastic SOJ packages. The assembly has eight drams mounted on each side of a printed circuit board in a 72 pad leadless SIM configuration.

This configuration allows socket-mounting of large quantities of memory in applications where high density and ease of inserting additional memory are important.

The operation of the AK5322048 is identical to sixteen 1Meg x 4 Drams. There are four CAS lines and four RAS lines. On each bank of 1Meg x 32, independent byte control is accomplished by the four CAS lines, where each separate CAS line controls two 1Meg x 4 Drams. Two banks of 32 bits are controlled by the two pairs of RAS lines. A sixteen bit data path can be produced by connecting DQ₁ to DQ₁₇, DQ₂ to DQ₁₈, and alternately strobing RAS₀ with RAS₁ and RAS₂ with RAS₃.
