Brief Description

The TSic™ temperature sensor IC family are fully tested and calibrated sensors with absolute measurement accuracy on delivery – no further calibration needed. The TSic™ combines outstanding accuracy with long term stability, yet it is very simple to use.

The TSic™ series is specifically designed for high performance, cost-effective solutions for sensing temperature in building automation, automotive, industrial, office automation, white goods and low-power/mobile applications.

TSic™ employs a high precision bandgap reference with proportional-to-absolute-temperature (PTAT) output; a low-power, precision ADC; and an on-chip DSP core with EEPROM to precisely calibrate the output temperature signal. The TSic™ series includes ICs with two linear analog signal output options, such as standard $0\sim 1\text{V}_{\text{out}}$ ($V_+ = 2.97\text{V}$ to 5.5V) or ratiometric ($10\sim 90\%$ of V_+ ; i.e., $0.5\sim 4.5\text{V}_{\text{out}}$ @ $V_+ = 5\text{V}$) or the digital serial output signal for interfacing with μ P controllers.

- 1 With supply voltage 2.7V - 2.97V, accuracy is slightly reduced; below 2.7V, functionality is unknown.
- 2 Output signal is limited to this ambient temperature (applies to calibration, offset and gain).
- 3 When using the output as a digital output, the load capacitor C_L is limited by maximum rise time for ZACwire™.
- 4 Locate as close as possible to TSic's V₊ and Gnd pins.
- 5 When using the output as a digital output, no pull-down resistor is allowed.
