

# Electronic Ignition Control Circuit

The 79076, in conjunction with an appropriate Freescale Power Darlington Transistor, provides an economical solution for automotive ignition applications. The 79076 offers optimum performance by providing closed loop operation of the Power Darlington in controlling the ignition coil current.

## Features

- Hall or Variable Reluctance Sensor Input
- Ignition Coil Voltage Internally Limited to 375 V
- Coil Current Limiting to 7.5 A
- Output On-Time (Dwell) Control
- Dwell Feedback Control to Sense Coil Variation
- Pb-Free Packaging Designated by Suffix Code EG

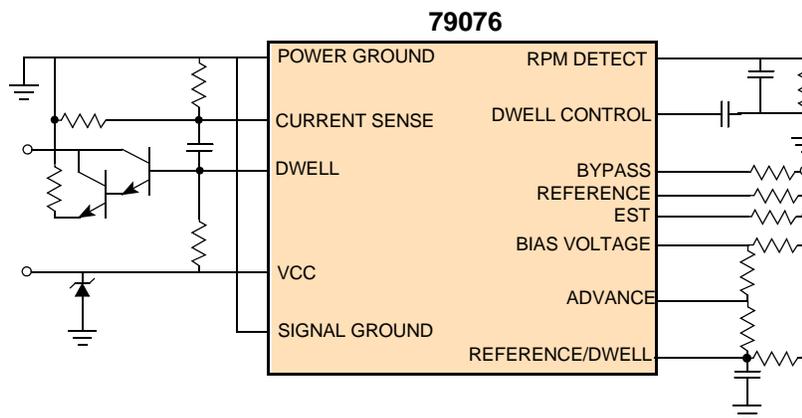

**79076**

## ELECTRICAL CHARACTERISTICS

### MAXIMUM RATINGS

**Table 1. Maximum Ratings**

All voltages are with respect to ground unless otherwise noted. Exceeding these ratings may cause a malfunction or permanent damage to the device.

Ratings	Symbol	Value	Unit
<b>ELECTRICAL RATINGS</b>			
Supply Voltage			V
Steady-State	$V_{CC(SUS)}$	36	
Transient Conditions <sup>(1)</sup>	$V_{CC(PK)}$	50	
Supply Current	$I_T$		A
Transient Conditions <sup>(2)</sup>		1.0	A
Transient Negative Current ( $t_T = 60ms$ )		-100	mA
Transient Negative Current ( $t_T = 1ms$ )		-1.3	A
Input Voltage <sup>(3)</sup>			V
Ref/Dwell, Advance	$V_{IN1}$	-5.0 to 30	
EST, Bypass	$V_{IN2}$	-5.0 to 24	
Ref/Dwell Input Current	$I_{IN1}$	-20	mA
Dwell ON Sink Current	$I_D$		A
Output ON (Operating)		0.3	
Output ON ( $t = 10ms$ )		0.8	
Dwell OFF Voltage <sup>(4)</sup>	$V_{D(OFF)}$	5.0	V
<b>THERMAL RATINGS</b>			
Storage Temperature	$T_{STG}$	-65 to 150	°C
Operating Ambient Temperature	$T_A$	-30 to 125	°C
<b>THERMAL RESISTANCE</b>			
Operating Junction Temperature	$T_J$	-30 to 150	°C
Thermal Resistance (Junction-to-Ambient) - SO8	$\theta_{J-A}$	80	°C/W
Peak Package Reflow Temperature During Reflow <sup>(5), (6)</sup>	$T_{PPRT}$	Note 6	°C

Notes

- Survivability of device with transient voltage applied to  $V_{CC}$  pin for a duration not to exceed 10ms.
- Survivability of device with overvoltage applied to  $V_{CC}$  pin producing the current for a duration not to exceed 10ms.
- Exceeding this voltage range on the function pin may cause permanent damage to the device.
- A zener diode is incorporated across collector to emitter of the output NPN device to prevent voltage overdrive of the external Darlington switch transistor.
- Pin soldering temperature limit is for 10 seconds maximum duration. Not designed for immersion soldering. Exceeding these limits may cause malfunction or permanent damage to the device.
- Freescale's Package Reflow capability meets Pb-free requirements for JEDEC standard J-STD-020C. For Peak Package Reflow Temperature and Moisture Sensitivity Levels (MSL), Go to [www.freescale.com](http://www.freescale.com), search by part number [e.g. remove prefixes/suffixes and enter the core ID to view all orderable parts. (i.e. MC33xxxD enter 33xxx), and review parametrics.

**STATIC ELECTRICAL CHARACTERISTICS**

**Table 2. Static Electrical Characteristics**

Characteristics noted under conditions  $7.0\text{ V} \leq V_{CC} \leq 18\text{ V}$ ,  $-40^\circ\text{C} \leq T_A \leq 125^\circ\text{C}$ ,  $\text{GND} = 0\text{ V}$  unless otherwise noted. Typical values noted reflect the approximate parameter means at  $T_A = 25^\circ\text{C}$  under nominal conditions unless otherwise noted.

Characteristic	Symbol	Min	Typ	Max	Unit
<b>INPUTS</b>					
Advance Input Resistance ( $V_{CC} = 16\text{ V}$ , Ref/Dwell = 1.0 V, Advance = 1.0 mA, EST = Bypass = 0 V)	$R_{(A)}$	15	18	25	$\text{k}\Omega$
Advance Voltage <sup>(7)</sup> $V_{CC} = 16\text{ V}$ , Ref/Dwell = 1.0 V, EST = Bypass = 0 V	$V_{TH(A)}$	-	0.05	0.1	V
Advance Threshold Voltage <sup>(7)</sup> ( $V_{CC} = 16\text{ V}$ , Ref/Dwell = 1.0 V, EST = Bypass = 0 V,) Dwell = Reference = RPM Detect = open, Dwell Control = sinking 10 $\mu\text{A}$ ) Increasing Decreasing Hysteresis	$V_{TH+(A)}$ $V_{TH-(A)}$ $V_{HYS(A)}$	$V_B + 0.103$ $V_B + 0.045$ 0.018	$V_B + 0.114$ $V_B + 0.068$ 0.045	$V_B + 0.130$ - -	V
Bypass Input Resistance ( $V_{CC} = 16\text{ V}$ , Ref/Dwell = Advance = 3.0 V, EST = Bypass = 0 V)	$R_{(BP)}$	6.0	9.2	16	$\text{k}\Omega$
Bypass Voltage ( $V_{CC} = 16\text{ V}$ , Ref/Dwell = Advance = 1.0 V, EST = 0V)	$V_{(BP)}$	-	0.065	0.1	V
Bypass Threshold Voltage <sup>(8)</sup> (Ref/Dwell = Advance = 1.0 V, EST = 3.0 V) Increasing Decreasing Hysteresis	$V_{TH+(BP)}$ $V_{TH-(BP)}$ $V_{HYS(BP)}$	$V_B + 1.6$ $V_B + 0.9$ 0.65	$V_B + 0.188$ $V_B + 0.103$ 0.86	$V_B + 2.1$ - -	V
Current Sense Threshold Voltage <sup>(9)</sup> ( $V_{CC} = 16\text{ V}$ , Ref/Dwell = Advance = 1.0 V, EST = Bypass = 3.0 V)	$V_{TH(CS)}$	90	105	121	mV
EST Input Resistance ( $V_{CC} = 16\text{ V}$ , Ref/Dwell = Advance = 1.0 V, Bypass = 3.0 V)	$R_{(EST)}$	7.0	10.3	18	$\text{k}\Omega$
EST Input Voltage (EST Mode) ( $V_{CC} = 16\text{ V}$ , Ref/Dwell = Advance = 1.0 V, Bypass = 3.0 V)	$V_{(EST)}$	-	0.07	0.1	V

Notes

- Advance Threshold Voltage is the positive (or negative) going voltage on Advance necessary cause the Dwell Control voltage to positive (or negative) going transition 2.0 V respectively. It is expressed as  $V_{TH\pm(A)} = V_B + V_X$  where  $V_B$  is the Bias Voltage and  $V_X$  is the additional voltage necessary to attain the threshold.
- Bypass Threshold Voltage is the positive (or negative) going voltage on Bypass necessary cause the Dwell voltage to positive (or negative) going transition 1.5 V respectively. It is expressed as  $V_{TH\pm(BP)} = V_B + V_X$  where  $V_B$  is the Bias Voltage and  $V_X$  is the additional voltage necessary to attain the threshold.
- Increasing voltage on Current Sense which when attained will cause Dwell to transition low to 1.5 V with a 10 mA load.

**Table 2. Static Electrical Characteristics (continued)**

Characteristics noted under conditions  $7.0\text{ V} \leq V_{CC} \leq 18\text{ V}$ ,  $-40^\circ\text{C} \leq T_A \leq 125^\circ\text{C}$ ,  $\text{GND} = 0\text{ V}$  unless otherwise noted. Typical values noted reflect the approximate parameter means at  $T_A = 25^\circ\text{C}$  under nominal conditions unless otherwise noted.

Characteristic	Symbol	Min	Typ	Max	Unit
EST Threshold Voltage <sup>(10)</sup> (Ref/Dwell = Advance = 1.0 V, Bypass = 3.0 V)					V
Increasing	$V_{\text{TH}+(\text{EST})}$	1.65	1.86	2.0

Hysteresis	$V_{\text{HYS}(\text{R/D})\text{NP}}$	$V_B + 0.013$	$V_B + 0.072$	-	

Notes

- EST Threshold Voltage is the positive (or negative) going voltage on EST necessary cause the Dwell voltage to positive (or negative) going transition 1.5 V respectively. It is expressed as  $V_{\text{TH}\pm(\text{EST})}$  and is in reference to ground.
- Ref/Dwell can either source or sink current; A minus sign denotes the Ref/Dwell is sourcing current.
- Ref/Dwell Threshold Voltage (Bypass Mode) is the positive (or negative) going voltage on Ref/Dwell necessary cause the Reference voltage to positive (or negative) going transition 1.5 V respectively. It is expressed as  $V_{\text{TH}\pm(\text{RD})} = V_B + V_X$  where  $V_B$  is the Bias Voltage and  $V_X$  is the additional voltage necessary to attain the threshold.
- Ref/Dwell Threshold Voltage (No Pump) is the positive (or negative) going voltage on Ref/Dwell necessary cause the Dwell voltage to positive (or negative) going transition 1.5 V respectively. It is expressed as  $V_{\text{TH}\pm(\text{RD})} = V_B + V_X$  where  $V_B$  is the Bias Voltage and  $V_X$  is the additional voltage necessary to attain the threshold. Advance = 1.0 V providing no input assist or "No Pump" influence of Dwell signal; Reference open.

**Table 2. Static Electrical Characteristics (continued)**

Characteristics noted under conditions  $7.0\text{ V} \leq V_{CC} \leq 18\text{ V}$ ,  $-40^\circ\text{C} \leq T_A \leq 125^\circ\text{C}$ ,  $\text{GND} = 0\text{ V}$  unless otherwise noted. Typical values noted reflect the approximate parameter means at  $T_A = 25^\circ\text{C}$  under nominal conditions unless otherwise noted.

Characteristic	Symbol	Min	Typ	Max	Unit

RoHS-compliant and/or Pb-free versions of Freescale products have the functionality and electrical characteristics of their non-RoHS-compliant and/or non-Pb-free counterparts. For further information, see <http://www.freescale.com> or contact your Freescale sales representative.

For information on Freescale's Environmental Products program, go to <http://www.freescale.com/epp>.

Information in this document is provided solely to enable system and software implementers to use Freescale Semiconductor products. There are no express or implied copyright licenses granted hereunder to design or fabricate any integrated circuits or integrated circuits based on the information in this document.

Freescale Semiconductor reserves the right to make changes without further notice to any products herein. Freescale Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Freescale Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters that may be provided in Freescale Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals", must be validated for each customer application by customer's technical experts. Freescale Semiconductor does not convey any license under its patent rights nor the rights of others. Freescale Semiconductor products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the Freescale Semiconductor product could create a situation where personal injury or death may occur. Should Buyer purchase or use Freescale Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold Freescale Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Freescale Semiconductor was negligent regarding the design or manufacture of the part.
