

300mA, Low Noise, Ultra-Fast CMOS LDO Regulator

General Description

The RT9198/A is designed for portable RF and wireless applications with demanding performance and space requirements. The RT9198/A performance is optimized for battery-powered systems to deliver ultra low noise and low quiescent current. Regulator ground current increases only slightly in dropout, further prolonging the battery life. The RT9198/A also works with low-ESR ceramic capacitors, reducing the amount of board space necessary for power applications, critical in hand-held wireless devices. The RT9198/A consumes less than 0.01 μ A in shutdown mode and has fast turn-on time less than 50 μ s. The other features include ultra low dropout voltage, high output accuracy, current limiting protection, and high ripple rejection ratio. Available in the SOT-23-3, SOT-23-5, SC-70-5, SC-82 and WDFN-6L 2x2 packages, the RT9198/A also offers a range from 1.5V to 5.0V with 0.1V per step.

Applications

- CDMA/GSM Cellular Handsets
- Battery-Powered Equipment
- Laptop, Palmtops, Notebook Computers
- Hand-Held Instruments
- PCMCIA Cards
- Portable Information Appliances

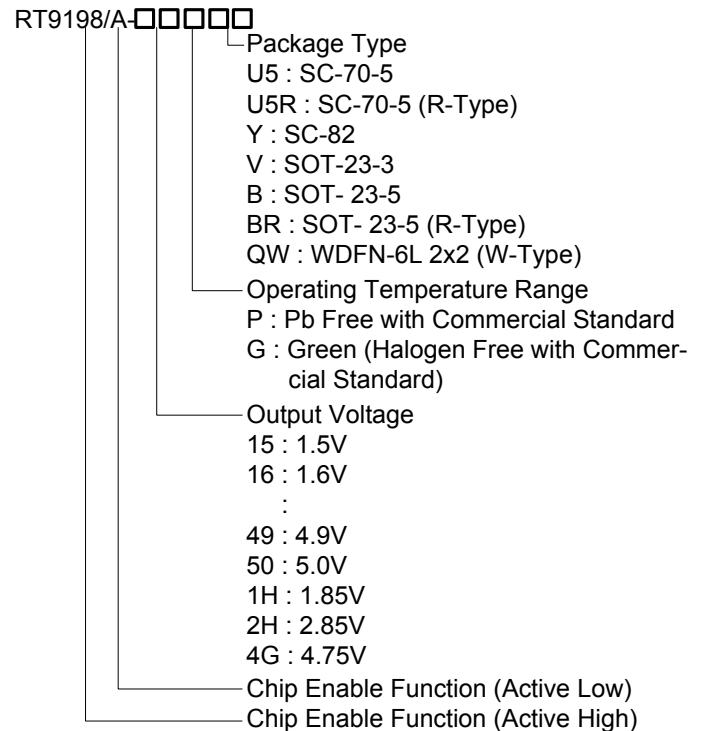

Marking Information

For marking information, contact our sales representative directly or through a RichTek distributor located in your area, otherwise visit our website for detail.

Features

- Low-Noise for RF Application
- Fast Response in Line/Load Transient
- Quick Start-Up (Typically 50 μ s)
- < 0.01 μ A Standby Current When Shutdown
- Low Dropout : 220mV @ 300mA
- Wide Operating Voltage Ranges : 2.5V to 5.5V
- TTL-Logic-Controlled Shutdown Input
- Low Temperature Coefficient
- Current Limiting Protection
- Thermal Shutdown Protection
- Only 1 μ F Output Capacitor Required for Stability
- High Power Supply Rejection Ratio
- Custom Voltage Available
- RoHS Compliant and 100% Lead (Pb)-Free

Ordering Information

Note :

RichTek Pb-free and Green products are :

- ▶RoHS compliant and compatible with the current requirements of IPC/JEDEC J-STD-020.
- ▶Suitable for use in SnPb or Pb-free soldering processes.
- ▶100% matte tin (Sn) plating.

Pin Configurations

(TOP VIEW)

SOT-23-5/SC-70-5 (R-Type)

SOT-23-5/SC-70-5

SC-82

SOT-23-3

WDFN-6L 2x2

Note : There is no pin1 indicator on top mark for SC-82 type, and pin 1 will be lower left pin when reading top mark from left to right. Pin2 of SC-82 is wider than other pins.

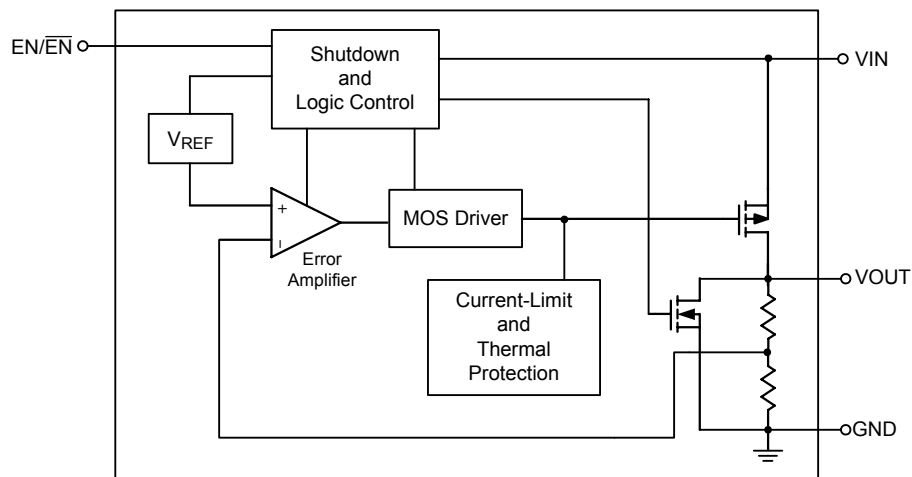

Typical Application Circuit

Functional Pin Description

Pin Name	Pin Function
EN	Chip Enable (Active High). Note that this pin is high impedance. There should be a pull low 100kΩ resistor connected to GND when the control signal is floating.
$\overline{\text{EN}}$	Chip Enable (Active Low). Note that this pin is high impedance. There should be a pull high 100kΩ resistor connected to VIN when the control signal is floating.
NC	No Internal Connect.
GND, Exposed Pad	Ground. Exposed pad should be soldered to PCB board and connected to GND.
VOUT	Output Voltage.
VIN	Input Voltage.

Function Block Diagram

Absolute Maximum Ratings (Note 1)

• Supply Input Voltage	-----	6V
• Power Dissipation, P_D @ $T_A = 25^\circ\text{C}$		
SOT-23-3/SOT-23-5	-----	400mW
SC-70-5, SC-82	-----	300mW
WDFN-6L 2x2	-----	606mW
• Package Thermal Resistance (Note 4)		
SOT-23-3/SOT-23-5, θ_{JA}	-----	250°C/W
SC-70-5, SC-82, θ_{JA}	-----	333°C/W
WDFN-6L 2x2, θ_{JA}	-----	165°C/W
WDFN-6L 2x2, θ_{JC}	-----	20°C/W
• Junction Temperature	-----	150°C
• Lead Temperature (Soldering, 10 sec.)	-----	260°C
• Storage Temperature Range	-----	-65°C to 150°C
• ESD Susceptibility (Note 2)		
HBM (Human Body Mode)	-----	2kV
MM (Machine Mode)	-----	200V

Recommended Operating Conditions (Note 3)

• Supply Input Voltage	-----	2.5V to 5.5V
• EN Input Voltage	-----	0V to 5.5V
• Junction Temperature Range	-----	-40°C to 125°C
• Ambient Temperature Range	-----	-40°C to 85°C

Electrical Characteristics

($V_{IN} = V_{OUT} + 1V$, $C_{IN} = C_{OUT} = 1\mu\text{F}$, $T_A = 25^\circ\text{C}$, unless otherwise specified)

Parameter	Symbol	Test Conditions	Min	Typ	Max	Units
Output Voltage Accuracy	ΔV_{OUT}	$I_{OUT} = 1\text{mA}$	-2	--	+2	%
Current Limit	I_{LIM}	$R_{LOAD} = 1\Omega$	360	400	--	mA
Quiescent Current	I_Q	RT9198, $V_{EN} \geq 1.2V$, $I_{OUT} = 0\text{mA}$ RT9198A, $V_{EN} \leq 0.4V$, $I_{OUT} = 0\text{mA}$	--	90	130	μA
Dropout Voltage (Note 5)	V_{DROP}	$I_{OUT} = 200\text{mA}$	--	170	200	mV
		$I_{OUT} = 300\text{mA}$	--	220	330	
Line Regulation	ΔV_{LINE}	$V_{IN} = (V_{OUT} + 1V)$ to 5.5V, $I_{OUT} = 1\text{mA}$	--	--	0.3	%
Load Regulation	ΔV_{LOAD}	$1\text{mA} < I_{OUT} < 300\text{mA}$	--	--	0.6	%
Shutdown Current	I_{SHDN}	RT9198, $V_{EN} = \text{GND}$, Shutdown RT9198A, $V_{EN} = V_{IN}$, Shutdown	--	0.01	1	μA
EN Input Bias Current	I_{IBEN}	$V_{EN} = \text{GND}$ or V_{IN}	--	0	100	nA
EN Threshold	Logic-Low Voltage	V_{IL}	--	--	0.4	V
	Logic-High Voltage	V_{IH}	1.2	--	--	

To be continued

Parameter		Symbol	Test Conditions	Min	Typ	Max	Units
Power Supply Rejection Rate	f = 100Hz	PSRR	C _{OUT} = 1μF, I _{OUT} = 100mA	--	-60	--	dB
	f = 10kHz			--	-30	--	
Thermal Shutdown Temperature		T _{SD}		--	165	--	°C
Thermal Shutdown Temperature Hysteresis		ΔT _{SD}		--	30	--	°C

Note 1. Stresses listed as the above "Absolute Maximum Ratings" may cause permanent damage to the device. These are for stress ratings. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may remain possibility to affect device reliability.

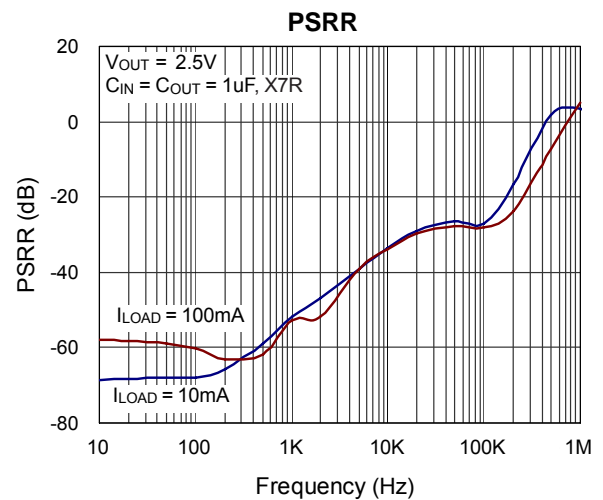

Note 2. Devices are ESD sensitive. Handling precaution recommended.

Note 3. The device is not guaranteed to function outside its operating conditions.

Note 4. θ_{JA} is measured in the natural convection at T_A = 25°C on a low effective single layers thermal conductivity test board of JEDEC 51-3 thermal measurement standard. The case point of θ_{JC} is on the exposed pad for the package.

Note 5. The dropout voltage is defined as V_{IN} - V_{OUT}, which is measured when V_{OUT} is V_{OUT(NORMAL)} - 100mV.

Applications Information

Like any low-dropout regulator, the external capacitors used for the RT9198/A must be carefully selected for regulator stability and performance. Using a capacitor whose value is $> 1\mu\text{F}$ on the RT9198/A input and the amount of capacitance can be increased without limit. The input capacitor must be located a distance of not more than 0.5 inch from the input pin of the IC and returned to a clean analog ground. Any good quality ceramic or tantalum can be used for this capacitor. The capacitor with larger value and lower ESR (equivalent series resistance) provides better PSRR and line-transient response.

The output capacitor must meet both requirements for minimum amount of capacitance and ESR in all LDOs application. The RT9198/A is designed specifically to work with low ESR ceramic output capacitor in space-saving and performance consideration. Using a ceramic capacitor whose value is at least $1\mu\text{F}$ with ESR is more than $20\text{m}\Omega$ on the RT9198/A output ensures stability. The RT9198/A still works well with output capacitor of other types due to the wide stable ESR range. Figure 1. shows the curves of allowable ESR range as a function of load current for various output capacitor values. Output capacitor of larger capacitance can reduce noise and improve load transient response, stability, and PSRR. The output capacitor should be located within 0.5 inch from the V_{OUT} pin of the RT9198/A and returned to a clean analog ground.

Figure 1

Enable Function

The RT9198/A features an LDO regulator enable/disable function.

To assure the RT9198 LDO regulator will switch on, the EN turn on control level must be greater than 1.2V. The RT9198 LDO regulator will go into shutdown mode when the voltage on the EN pin falls below 0.4V. For RT9198A, the $\overline{\text{EN}}$ turn on control level must be lower than 0.4V to assure the RT9198A LDO regulator switch on. The RT9198A LDO regulator will go into shutdown mode when the voltage on the $\overline{\text{EN}}$ pin is higher than 1.2V. The RT9198A equips a quick-discharge function to protect the system. When the regulator is turned off by EN pin, the internal MOSFET between V_{OUT} and GND will be turned on to discharge output voltage quickly. If the enable function is not needed in a specific application, it may be tied to GND/ V_{IN} to keep the LDO regulator in a continuously on state.

Thermal Considerations

Thermal protection limits power dissipation in RT9198/A. When the operating junction temperature exceeds 165°C , the OTP circuit starts the thermal shutdown function and turns the pass element off. The pass element turns on again after the junction temperature cools by 30°C .

For continuous operation, do not exceed absolute maximum operating junction temperature 125°C . The power dissipation definition in device is shown as following formula :

$$P_D = (V_{\text{IN}} - V_{\text{OUT}}) \times I_{\text{OUT}} + V_{\text{IN}} \times I_Q$$

The maximum power dissipation depends on the thermal resistance of IC package, PCB layout, the rate of surroundings airflow and temperature difference between junction to ambient. The maximum power dissipation can be calculated by following formula :

$$P_{D(\text{MAX})} = (T_{J(\text{MAX})} - T_A) / \theta_{\text{JA}}$$

Where $T_{J(\text{MAX})}$ is the maximum operating junction temperature 125°C , T_A is the ambient temperature and the θ_{JA} is the junction to ambient thermal resistance.

For recommended operating conditions specification of RT9198/A, where $T_{J(MAX)}$ is the maximum junction temperature of the die ($125^{\circ}C$) and T_A is the maximum ambient temperature. The junction to ambient thermal resistance (θ_{JA} is layout dependent) for SOT-23-3/ SOT-23-5 package is $250^{\circ}C/W$, SC-70-5 and SC-82 package is $333^{\circ}C/W$ and WDFN-6L 2x2 package is $165^{\circ}C/W$ on standard JEDEC 51-3 thermal test board. The maximum power dissipation at $T_A = 25^{\circ}C$ can be calculated by following formula :

$$P_{D(MAX)} = (125^{\circ}C - 25^{\circ}C)/250 = 400mW \text{ (SOT-23-3/ SOT-23-5)}$$

$$P_{D(MAX)} = (125^{\circ}C - 25^{\circ}C)/333 = 300mW \text{ (SC-70-5, SC-82)}$$

$$P_{D(MAX)} = (125^{\circ}C - 25^{\circ}C) / 165 = 606mW \text{ (WDFN-6L 2x2)}$$

The maximum power dissipation depends on operating ambient temperature for fixed $T_{J(MAX)}$ and thermal resistance θ_{JA} . For RT9198/A packages, the Figure 2. of derating curves allows the designer to see the effect of rising ambient temperature on the maximum power allowed.
