

Precision Micropower 2.5V Shunt Voltage Reference

FEATURES

- Low temperature coefficient 100 ppm/°C
- Operating current range 100µA to 15 mA
- Low power, 250 mW @ $I_{in}=100$ mA
- Two terminal "Zener" operation
- Small package: SOT - 23, TO-92, and SO-8
- Fixed reverse breakdown voltage 2.5 Volt
- No output capacitance required
- Similar replacement for LM4040

APPLICATIONS

- Constant Current Source
- Digital Voltmeter
- Power Supply Monitor
- Precision Regulators
- Battery-Powered Equipment
- Instrumentation
- Automotive Electronics
- Data Acquisition Systems
- Energy Management

PRODUCT DESCRIPTION

The SPX4040 is a two-terminal, temperature compensated, band-gap voltage reference, which provides a fixed 2.5V output for input currents between 100 µA to 15mA. The bandgap voltage (2.5V) is independently trimmed from the output voltage to achieve a very low tempco. This trimming technique process gives a very stable device over the full temperature range (A grade 50 ppm/ °C). The SPX4040 is available in the sub-miniature (3mm × 1.3mm) SOT-23, SO-8 surface mount package, or TO-92 package. The operating temperature is -40°C to 85°C.

The SPX4040 advanced design eliminates the need for an external stabilized capacitor while insuring stability with any capacitive load, making them easy to use.

PIN CONNECTIONS

ABSOLUTE MAXIMUM RATINGS

Reverse Current 20mA
 Forward Current 10mA
 Storage Temperature -65°C to +150°C
 Lead Temperature (Soldering) 300°C

Power Dissipation at 25°C
 M Package 300mW
 N Package 550mW
 S Package 525mW
 Temperature Range -40°C ≤ T_A ≤ +85°C

- Note:
- 1) Three-point measurement guarantees the error band over the specified temperature range.
 - 2) Optimum performance is obtained at currents below 1000 μA .
 - 3) Limits are 100% production tested at 25 $^\circ C$. Limits over temperature are guaranteed through correlation using statistical quality control.

SPX4040 Applications Hints

This device is designed for stable operation and has no need of an external capacitor between pin 4 and 8. The reference remains stable if a bypass capacitor is used.

SOT-23

The SPX4040 in the SOT-23 package has a parasitic Schottky diode between pin 3 and pin 1. Pin 1 of SOT-23 must float or be connected to pin 3.

Conventional Shunt Regulator

In a conventional shunt regulator application (see Figure 1), an external series resistor (R_S) is connected between the supply voltage and the SPX4040. R_S determines the current that flows through the load (I_L) and the reference (I_Q). Since load current and supply voltage may vary, R_S should be small enough to supply at least the minimum acceptable I_Q to the reference even when the supply voltage is at its minimum and the load current is at its maximum value. When the supply voltage is at its maximum and I_L is at its minimum, R_S should be large enough so that the current flowing through the SPX4040 is less than 15mA

R_S is determined by the supply voltage (V_S), the load and operating current (I_L and I_Q), reference's reverse breakdown voltage (V_R).

$$R_S = (V_S - V_R)/(I_L + I_Q)$$
