## LOW VOLTAGE OCTAL D-TYPE FLIP-FLOP WITH 5 V TOLERANT INPUTS AND OUTPUTS

The TC7MZ374 is a high performance CMOS OCTAL D-TYPE FLIP FLOP. Designed for use in 3.3 Volt systems, it achieves high speed operation while maintaining the CMOS low power dissipation.

The device is designed for low-voltage (3.3 V) V<sub>CC</sub> applications, but it could be used to interface to 5V supply environment for both inputs and outputs. This 8 bit D-type flip-flop is controlled by a clock input (CK) and a output enable input  $(\overline{OE})$ . When the  $\overline{OE}$  input is high, the eight outputs are in a high impedance state. All inputs are equipped with protection circuits against static discharge.

Weight: 0.03 g (typ.)

#### **Features**
