

■ General Description

The AME41-ADJ is a micropower 3-terminal band-gap voltage regulator diode with a user adjustable output voltage. It operates over a 15 μ A to 20mA current range. Each circuit is trimmed at wafer sort to provide a $\pm 0.20\%$ and $\pm 0.50\%$ initial tolerance. The design of the AME41-ADJ allows for a large range of load capacitances and operating currents. The low start-up current makes these part ideal for battery applications.

Analog Microelectronics offers this part in a TO-92 and SO-8 packages as well as the space saving SOT-23.

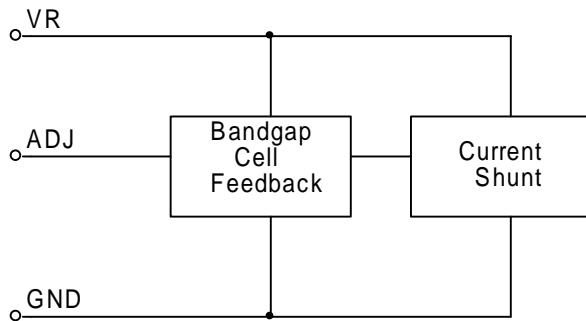

■ Key Features

- Small packages: SOT-23, TO-92, SO-8
