### Remarks

- $I_s$  is positive when  $I_p$  flows in the direction of the arrow.
- Temperature of the primary conductor should not exceed 100°C.
- Dynamic performances (di/dt and response time) are best with a single bar completely filling the primary hole.
- Mounting clips molded into the transducer housing, attach to printed circuit board 1.6mm thick.

### Recommended dimensions for mounting holes when using the mounting clips.
