#### **Functional Diagram**

#### **General Description**

The HMC615LP4(E) are high linearity, GaAs FET converter ICs that operate from 2.3 to 4.0 GHz and deliver a +35 dBm input third order intercept point. The LO amplifier output and high dynamic range mixer input are positioned so that an external LO filter can be placed in series between them. The IC operates from a single +5V supply consuming 65 mA of current and accepts a LO drive level of -2 to +6 dBm. The design requires no external baluns and supports IF frequencies between DC and 1 GHz. The HMC615LP4(E) is pin for pin compatible with the HMC551LP4(E), HMC552LP4(E) and HMC215LP4(E), which operate from 0.8 to 4.0 GHz. For availability on Non-RoHS HMC615LP4 products please contact Hittite Microwave sales directly.

#### **Pin Descriptions**

Pin Number	Function	Description	Interface Schematic
1	MIX LO	This pin is DC coupled and matched to 50 Ohms. An off chip DC blocking capacitor is required.	MIX LOO
2, 6 - 9, 11 - 17, 19 - 24	N/C	No connection. These pins may be connected to RF ground. Performance will not be affected.	
3	BIAS	Power supply for the LO amplifier , a Bias resistor is required. Three external bypass capacitors are recommended for optimum performance, as illustrated in the application circuit.	BIASO
4	GND	Backside of package has exposed metal ground paddle that must also be connected to ground.	GND
5	LO	This pin is DC coupled and matched to 50 Ohms. An off chip DC blocking capacitor is required.	LOO
10	IF	This pin is DC coupled. For applications not requiring operation to DC, this port should be DC blocked externally using a series capacitor whose value has been chosen to pass the necessary IF frequency range. For operation to DC, this pin must not source/sink more than 18 mA of current or die non-function and possible die failure will result.	
18	RF	This pin is DC coupled and matched to 50 Ohms.	RE O

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
