

75 Ω VIDEO LINE DRIVER

FEATURES

- Internal Y-C Summing Circuit
- Voltage Gain is 6 dB Fixed
- Internal 75 Ω Driver
- Active High ON/OFF Control
- Very Low Standby Current (typ. $I_{STBY} \leq 25 \mu A$)
- Very Small Output Capacitor Using SAG Function Pin
- Very Small Package (SOT23L-8)
- Single +5 V Power Supply Operation

APPLICATIONS

- Video Equipment
- Digital Cameras
- CCD Cameras
- TV Monitors
- Video Tape Recorders
- LCD Projectors

DESCRIPTION

Operating from a single +5 V supply, the TK15409 is a video line driver IC that takes standard Y and C analog inputs and provides a composite analog output for driving 150 Ω loads (75 Ω resistor and 75 Ω cable load). Internal summing of the Y and C inputs is performed to produce the composite video output. The luminance (Y) input is clamped at 1.25 V and amplified 6 dB; the chrominance (C) input is biased at 2.0 V and amplified 6 dB. The internal 1.5 kΩ SAG function resistor provides gain compensation for low frequency signals. During standby (Pin 5 grounded), the TK15409 consumes only 127 μW of power. Nominal power dissipation (no input) is typically 90 mW.

The TK15409M is available in the very small SOT23L-8 surface mount package.
