

### PROGRAMMABLE SHUNT REGULATOR

The KA336-2.5/B integrated Circuits are precision 2.5V shunt regulators. The monolithic IC voltage references operates as a low temperature coefficient 2.5V zener with  $0.2\Omega$  dynamic impedance. A third terminal on the KA336-2.5/B allow the reference voltage and temperature coefficient to be trimmed easily.

KA336.2.5/B are useful as a precision 2.5V low voltage reference for digital voltmeters, power supplies or op amp circuitry. The 2.5V make it convenient to obtain a stable reference from low voltage supplies. Further, since the KA336-2.5/B operate as shunt regulators, they can be used as either a positive or negative voltage reference.

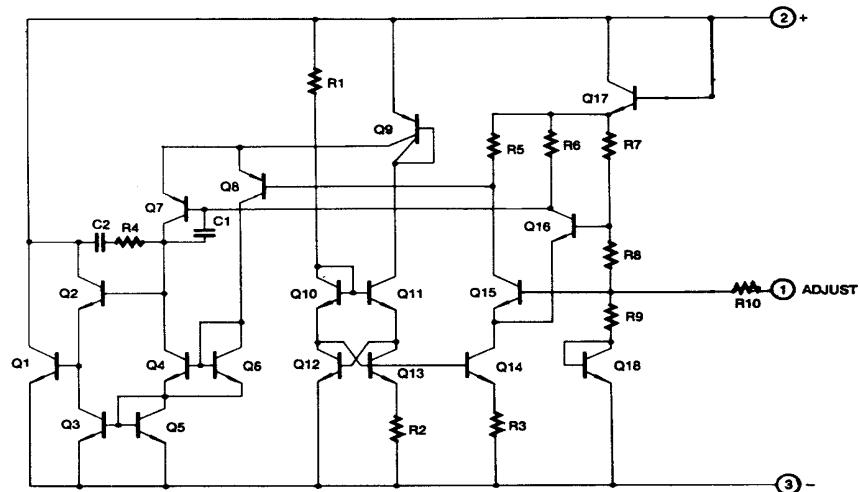

### FEATURES

- Low temperature coefficient
- Guaranteed temperature stability 4mV typical
- $0.2\Omega$  dynamic impedance
- $\pm 1.0\%$  initial tolerance available.
- Easily trimmed for minimum temperature drift
