AIMB-780

Intel® Core™ i7/i5/i3/Pentium/Xeon with DVI/VGA, 4 COM, Dual LAN, DDR3

Features

- Supports Intel® Core™ i7/i5/i3/Pentium/Xeon CPUs. processor with Q57/3450 chipset
- Four DIMM socket support up to 16 GB DDR3 800/1066/1333
- Supports dual display of VGA and DVI and dual GbE LAN
- Supports SATA RAID 0, 1, 5, 10, AMT6.0, TPM1.2 (optional)
- Supports Embedded Software APIs and Utilities

Software APIs:

Utilities:

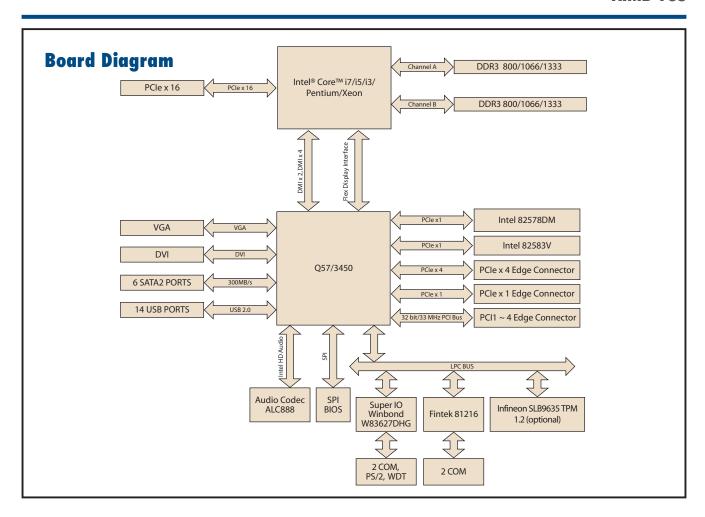

C € FCC

Note: eSOS need ODM BIOS by request

Specifications

	CPU	X3450	Core i7-860	Core i5-750	Core i5-660	Core i3-540	Pentium G6950	
	Support chipset	3450	Q57	Q57	3450/Q57	3450/Q57	3450/Q57	
	Max. Speed	2.67 GHz	2.8 GHz	2.66 GHz	3.33 GHz	3.06 GHz	2.8 GHz	
Processor System	Integrated Graphic	Only Intel Clarkdale CPU are embedded with integrated graphics						
1 10003001 Oyotoiii	L2 Cache	8 MB	8 MB	8 MB	4 MB	4 MB	3 MB	
	Chipset		d 3450(WS version)		TIVID	11110	O IVID	
	BIOS	AMI 64 Mbit SPI						
	PCI	32-bit/33 MH						
	PCIe x1		direction, 1 slot					
Expansion Slot	PCle x 4							
	PCIe x16 (Gen2)	1.0 GB/s per direction, 1 slot 8 GB/s per direction, 1 slot						
	Technology			3 (Only 3450 chinse	t sunnort ECC mem	nory)		
Memory	Max. Capacity	Dual Channel DDR3 800/1066/1333 (Only 3450 chipset support ECC memory) 16 GB						
Wichiory	Socket	4 x 240-pin D	INANA					
	Controller	Intel GFX	IIVIIVI					
Graphics	VRAM	TBD						
	Interface	10/100/1000	Mhna		,			
Ethornot	Controller	-,,		NO. Intol OOFOOV				
Ethernet			tel 82578DM, GbE LA	AINZ: IIIIEI 82383V				
	Connector	RJ-45 x 2						
SATA	Max Data Transfer Rate	300 MB/s						
	Channel	6						
	VGA	1						
	DVI	1						
	Ethernet	2						
Rear I/O	USB	4 (USB 2.0 co						
	Audio	2 (Mic-in, Line-out)						
	Serial	2 (RS-232)						
	PS/2		rd and 1 x mouse)					
	USB	10 (USB 2.0 c						
		Serial 2 (1 of RS-232, 1 of RS-232/422/485 for support auto flow control)						
	IDE -							
Internal Connector	SATA	6						
	FDD	1						
	Parallel	1						
	IrDA	-						
	DIO	-

Watchdog Timer	Interval	Programmabl	e 1 ~ 255 sec/min					
Danier Danielana	Power On	5 V	3.3 V	12 V	5 Vsb	-12 V		
Power Requirement		TBD	TBD	TBD	TBD	TBD		
		Operating			Non-Operating			
Environment	T	0. 60° C (22. 140° E), depends on CDII speed and						
,	Temperature	cooler solutio			-40 ~ 85° C (-4	U~ 185°F)		
Physical Characteristics	Dimensions		nm (12" x 9.6")					

Ordering Information

Part Number	Chipset	Memory	USB	COM	GbE LAN	TPM
AIMB-780Q-00A1E	Q57	Non-ECC	14	4	2	None
AIMB-780W-00A1E	3450	ECC	14	4	2	Yes

Riser Card

Part Number	Description
AIMB-RP10P-01A1E	1U riser card with 1 PCI expansion
AIMB-RP30P-03A1E	2U riser card with 3 PCI expansion
AIMB-RP3PF-21A1E	2U riser card with 1PCle x 16 & 2PCl slot expansion

Bracket View

Packing List

P/N	Description	Quantity
	FDD cable	x 1
	SATA HDD cable	x 2
	SATA Power cable	x 2
	I/O port bracket	x 1
	Startup manual	x 1
	Driver CD	x 1

Accessories

Part Number	Description
1700002204	Dual port USB cable (27 cm) with bracket
TBD	LGA1156 CPU cooler for 2U and wallmount chassis

Value-Added Software Services

Software API: An interface that defines the ways by which an application program may request services from libraries and/or operating systems. Provides not only the underlying drivers required but also a rich set of user-friendly, intelligent and integrated interfaces, which speeds development, enhances security and offers add-on value for Advantech platforms. It plays the role of catalyst between developer and solution, and makes Advantech embedded platforms easier and simpler to adopt and operate with customer applications.

Software APIs

Control

General Purpose Input/Output is a flexible parallel interface that allows a variety of custom connections. It allows users to monitor the level of signal input or set the output status to switch on/off a device. Our API also provides Programmable GPIO, which allows developers to dynamically set the GPIO input or output status.

SMBus is the System Management Bus defined by Intel® Corporation in 1995. It is used in personal computers and servers for low-speed system management communications. The SMBus API allows a developer to interface a embedded system environment and transfer serial messages using the SMBus protocols, allowing multiple simultaneous device

I²C is a bi-directional two wire bus that was developed by

Philips for use in their televisions in the 1980s. The I²C API allows a developer to interface with an embedded system environment and transfer serial messages using the I²C protocols, allowing multiple simultaneous device control.

Monitor

A watchdog timer (WDT) is a device that performs a specific operation after a certain period of time if something goes wrong and the system does not recover on its own.

A watchdog timer can be programmed to perform a warm boot (restarting the system) after a certain number of seconds.

Hardware Monitor

The Hardware Monitor (HWM) API is a system health supervision API that inspects certain condition indexes, such as fan speed, temperature and voltage.

Control

Power Saving

The Hardware Control API allows developers to set the PWM (Pulse Width Modulation) value to adjust fan speed or other devices; it can also be used to adjust the LCD brightness.

Display

Brightness Control

The Brightness Control API allows a developer to interface with an embedded device to easily control brightness.

Make use of Intel SpeedStep technology to reduce power power consumption. The system will automatically adjust the CPU Speed depending on system loading.

System Throttling

Refers to a series of methods for reducing power consumption in computers by lowering the clock frequency. These APIs allow the user to lower the clock from 87.5% to 12.5%.

Software Utilities

Backlight

BIOS Flash

The BIOS Flash utility allows customers to update the flash ROM BIOS version, or use it to back up current BIOS by copying it from the flash chip to a file on customers' disk. The BIOS Flash utility also provides a command line version and API for fast implementation into customized applications.

Embedded Security ID

The embedded application is the most important property of a system integrator. It contains valuable intellectual property, design knowledge and innovation, but it is easily copied! The Embedded Security ID utility provides reliable security functions for customers to secure their application data within embedded

The Monitoring utility allows the customer to monitor system health, including voltage, CPU and system temperature and fan speed. These items are important to a device; if critical errors happen and are not solved immediately, permanent damage may

eSOS

The eSOS is a small OS stored in BIOS ROM. It will boot up in case of a main OS crash. It will diagnose the hardware status, and then send an e-mail to a designated administrator. The eSOS also provides remote connection: Telnet server and FTP server, allowing the administrator to rescue the system.

Flash Lock

Flash Lock is a mechanism that binds the board and CF card (SQFlash) together. The user can "Lock" SQFlash via the Flash Lock function and "Unlock" it via BIOS while booting. A locked SQFlash cannot be read by any card reader or boot from other platforms without a BIOS with the "Unlock" feature.
