MIL-STD-1553 / 1760
3.3V Monolithic Dual Transceivers

October 2009

DESCRIPTION

The HI-1579 and HI-1581 are low power CMOS dual transceivers designed to meet the requirements of the MIL-STD-1553 specification.

The transmitter section of each bus takes complementary CMOS / TTL Manchester II bi-phase data and converts it to differential voltages suitable for driving the bus isolation transformer. Separate transmitter inhibit control signals are provided for each transmitter.

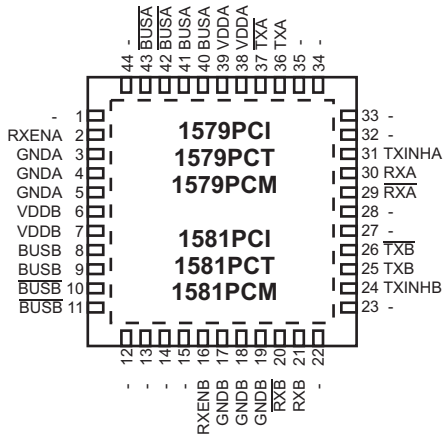
The receiver section of the each bus converts the 1553 bus bi-phase differential data to complementary CMOS / TTL data suitable for inputting to a Manchester decoder. Each receiver has a separate enable input which can be used to force the output of the receiver to a logic "0" (HI-1579) or logic 1 (HI-1581).

To minimize the package size for this function, the transmitter outputs are internally connected to the receiver inputs, so that only two pins are required for connection to each coupling transformer.

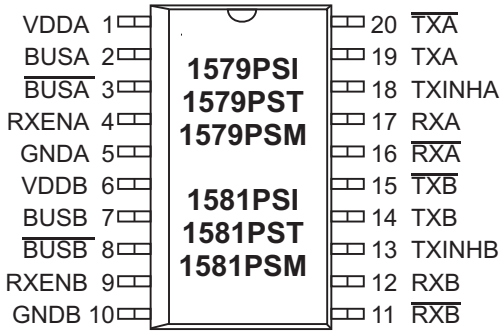
FEATURES

- Compliant to MIL-STD-1553A and B, MIL-STD-1760 and ARINC 708A
- 3.3V single supply operation
- Smallest footprint available in 7mm x 7mm 44 pin plastic chip-scale package (QFN)
- Less than 0.5W maximum power dissipation
- Industrial and extended temperature ranges
- Industry standard pin configurations

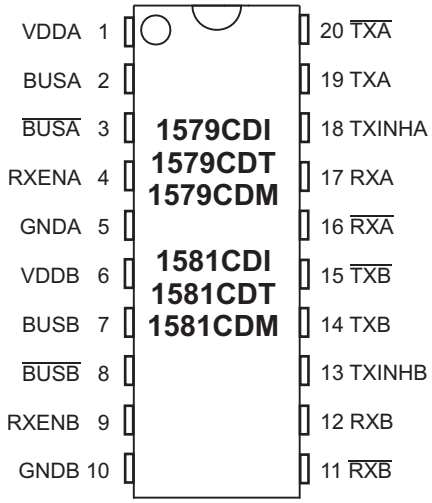
PIN CONFIGURATIONS



44 Pin Plastic 7mm x 7mm Chip-scale package



20 Pin Plastic ESOIC - WB package



20 Pin Ceramic DIP package

PIN DESCRIPTIONS

PIN (DIP & SOIC)	SYMBOL	FUNCTION	DESCRIPTION
1	VDDA	power supply	+3.3 volt power for transceiver A
2	BUSA	analog output	MIL-STD-1533 bus driver A, positive signal
3	$\overline{\text{BUSA}}$	analog output	MIL-STD-1553 bus driver A, negative signal
4	RXENA	digital input	Receiver A enable. If low, forces RXA and $\overline{\text{RXA}}$ low
5	GNDA	power supply	Ground for transceiver A
6	VDDB	power supply	+3.3 volt power for transceiver B
7	BUSB	analog output	MIL-STD-1533 bus driver B, positive signal
8	$\overline{\text{BUSB}}$	analog output	MIL-STD-1553 bus driver B, negative signal
9	RXENB	digital input	Receiver B enable. If low, forces RXB and $\overline{\text{RXB}}$ low
10	GNDB	power supply	Ground for transceiver B
11	$\overline{\text{RXB}}$	digital output	Receiver B output, inverted
12	RXB	digital output	Receiver B output, non-inverted
13	TXINHB	digital input	Transmit inhibit, bus B. If high BUSB, $\overline{\text{BUSB}}$ disabled
14	TXB	digital input	Transmitter B digital data input, non-inverted
15	$\overline{\text{TXB}}$	digital input	Transmitter B digital data input, inverted
16	$\overline{\text{RXA}}$	digital output	Receiver A output, inverted
17	RXA	digital output	Receiver A output, non-inverted
18	TXINHA	digital input	Transmit inhibit, bus A. If high BUSA, $\overline{\text{BUSA}}$ disabled
19	TXA	digital input	Transmitter A digital data input, non-inverted
20	$\overline{\text{TXA}}$	digital input	Transmitter A digital data input, inverted

FUNCTIONAL DESCRIPTION

The HI-1579 family of dual data bus transceivers contains differential voltage source drivers and differential receivers. It is intended for applications using a MIL-STD-1553 A/B data bus. The device produces a trapezoidal output waveform during transmission.

TRANSMITTER

Data input to the device's transmitter section is from the complementary CMOS inputs TXA/B and $\overline{\text{TXA}}/\overline{\text{B}}$. The transmitter accepts Manchester II bi-phase data and converts it to differential voltages on BUSA/B and $\overline{\text{BUSA}}/\overline{\text{B}}$. The transceiver outputs are either direct or transformer coupled to the MIL-STD-1553 data bus. Both coupling methods produce a nominal voltage on the bus of 7.5 volts peak to peak.

The transmitter is automatically inhibited and placed in the high impedance state when both TXA/B and $\overline{\text{TXA}}/\overline{\text{B}}$ are either at a logic "1" or logic "0" simultaneously. A logic "1" applied to the TXINHA/B input will force the transmitter to the high impedance state, regardless of the state of TXA/B and $\overline{\text{TXA}}/\overline{\text{B}}$.

RECEIVER

The receiver accepts bi-phase differential data from the MIL-STD-1553 bus through the same direct or transformer coupled interface as the transmitter. The receiver's differential input stage drives a filter and threshold comparator that produces CMOS data at the RXA/B and $\overline{\text{RXA}}/\overline{\text{B}}$ output pins. When the MIL-STD-1553 bus is idle and RXENA or RXENB are high, RXA/B will be logic "0" on HI-1579 and logic "1" on HI-1581.

Each set of receiver outputs can also be independently forced to the bus idle state (logic "0" on HI-1579 or logic "1" on HI-1581) by setting RXENA or RXENB low.

MIL-STD-1553 BUS INTERFACE

A direct coupled interface (see Figure 2) uses a 1:2.5 ratio isolation transformer and two 55 ohm isolation resistors between the transformer and the bus.

In a transformer coupled interface (see Figure 3), the transceiver is also connected to a 1:2.5 isolation transformer which in turn is connected to a 1:1.4 coupling transformer. The transformer coupled method also requires two coupling resistors equal to 75% of the bus characteristic impedance (Zo) between the coupling transformer and the bus.

HEAT SINK - ESOIC & CHIP-SCALE PACKAGE

The HI-1579PSI/T/M and HI-1581PSI/T/M use a 20-pin thermally enhanced SOIC package. The HI-1579PCI/T/M and HI-1581PCI/T/M use a plastic chip-scale package (QFN). These packages include a metal heat sink located on the bottom surface of the device. This heat sink should be soldered down to the printed circuit board for optimum thermal dissipation. The heat sink is electrically isolated and may be soldered to any convenient power or ground plane.

APPLICATIONS NOTE

Holt Applications Note AN-500 provides circuit design notes regarding the use of Holt's family of MIL-STD-1553 transceivers. Layout considerations, as well as recommended interface and protection components are included.

RECOMMENDED TRANSFORMERS

The HI-1579 and HI-1581 transceivers have been characterized for compliance with the electrical requirements of MIL-STD-1553 when used with the following transformers. Holt recommends the Premier Magnetics parts as offering the best combination of electrical performance, low cost and small footprint.

MANUFACTURER	PART NUMBER	APPLICATION	TURNS RATIO(S)	DIMENSIONS
Premier Magnetics	PM-DB2725EX	Isolation	Dual tapped 1:1.79, 1:2.5	.500 x .500 x .375 inches
Technotrol	TL1553-45	Isolation	Dual tapped 1:1.79, 1:2.5	.630 x 630 x .155 inches

Technotrol	TQ-1553-2	Stub coupling	1:1.4	.625 x .625 x .250 inches

REVISION HISTORY

Document	Rev.	Date	Description of Change
DS1579	F	07/24/09	Correct typographical errors in package dimensions. Clarified available temperature ranges.
	G	10/5/09	Clarified status of RXA/B and $\overline{RXA}$/$\overline{B}$ pins in bus idle state when RXENA or RXENB are high (logic “1”). Clarified nomenclature of chip-scale package as QFN. Added ’M’ flow option for QFN package (’PCM’ package option). Updated datasheet to include HI-1581 variant.
