## MADR-007098-000100

# Linear Driver for PIN Diode Attenuators

Rev. V2

#### **Features**

- Linearizes PIN Diode Attenuators Over a Wide Attenuation Range
- Output Currents up to 12 mA
- Operates with a Single Supply Voltage of +3V to +12V
- Low Quiescent Currents
- Single Control Voltage
- Test Boards are Available
- Tape and Reel Packaging Available
- Lead-Free SOW-16 Package
- 100% Matte Tin Plating over Copper
- Halogen-Free "Green" Mold Compound
- 260°C Reflow Compatible
- RoHS\* Compliant Version of DR65-0002

### **Description**

M/A-COM's MADR-007098-000100 is a break point free driver that produces a logarithmic output current suitable for linearizing PIN diode based shunt attenuators. This driver, in conjunction with customer defined external components, produces a linear transfer function (dB/V) between the input control voltage of the driver and the attenuation output of the PIN attenuator. The MADR-007098-000100 has been optimized for linearizing M/A-COM's MAAV-MAAV-007090-000100 007089-000100 or attenuators, but will function well with most types of cathode grounded, PIN attenuators. The driver is packaged in a SOW-16 package for commercial SMT applications. A typical schematic for a 30 dB, 7.5 dB/V linear attenuator is shown in Figure 1.

### **Ordering Information**

Part Number	Package		
MADR-007098-000100	Bulk Packaging		
MADR-007098-0001TR	1000 piece reel		
MAAV-007089-DR01TB	Test Board with Circuit per Figure (MAAV-007089-000100, GSM Attenuator)		
MAAV-007090-DR01TB	Test Board with Circuit per Figure 1 (MAAV-007090-000100, PCS Attenuator)		

Note: Reference Application Note M513 for reel size information.

### **Circuit Description:**

#### (Reference Figures 1 and 2)

The input divider, R1 and the sum of R2 and R3, sets the overall transfer function of the circuit. To increase the transfer function, decrease the Control Voltage and the value of R1. Varying the value of R4 will optimize the linearity of the circuit. One can achieve a very linear transfer function (less than ± 1 dB/V) by driving the attenuator over a smaller portion of its dynamic range. In the case of the MAAV-007089-000100 and MAAV-007090-000100 attenuators, this would be limited to a dynamic range of 28 and 25 dB, respectively. Temperature compensation is a function temperature coefficient of the thermistor, R3, and the ratio of R2 to R3, and can only be optimized once the transfer function and linearity component values have been established.

<sup>1.</sup> Exceeding any one or combination of these limits may cause permanent damage to this device.

### **Handling Procedures**

Please observe the following precautions to avoid damage:

#### **Static Sensitivity**

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

<sup>2.</sup> M/A-COM does not recommend sustained operation near these survivability limits.
