Description

M/A-COM's MAAV-007091-000100 is a PIN diode based voltage variable attenuator. This device is in a 6mm square, 28 lead, plastic CSP package, suitable for surface mounting on PCBs. These attenuators have linear operating power and input intercept point levels 15 - 20 dB better than GaAs FET MMIC voltage variable attenuators. They are ideally suited for use where low distortion, high linear operating power and high dynamic range are required. These devices are optimized for the PCS and UMTS frequency bands, but exhibit excellent performance and repeatability over the entire specified frequency band. The MAAV-007091-000100 is ideally suited for wireless communications systems.

1. Bias current may be applied to Pin 9 or 23. However, the unused pin must be isolated.
2. The exposed pad centered on the package bottom must be connected to RF and DC ground. (For PQFN packages)
3. It is preferable to ground all "NC" pins, except for the unused bias pin, which must be left open.
