Data Sheet

**ADVANCE
INFORMATION**

Notice to Readers: The Advance Information status indicates that this document contains information on one or more products under development at Spansion Inc. The information is intended to help you evaluate this product. Do not design in this product without contacting the factory. Spansion Inc. reserves the right to change or discontinue work on this proposed product without notice.

Notice On Data Sheet Designations

SpanSion Inc. issues data sheets with Advance Information or Preliminary designations to advise readers of product information or intended specifications throughout the product life cycle, including development, qualification, initial production, and full production. In all cases, however, readers are encouraged to verify that they have the latest information before finalizing their design. The following descriptions of SpanSion data sheet designations are presented here to highlight their presence and definitions.

Advance Information

The Advance Information designation indicates that SpanSion Inc. is developing one or more specific products, but has not committed any design to production. Information presented in a document with this designation is likely to change, and in some cases, development on the product may discontinue. SpanSion Inc. therefore places the following conditions upon Advance Information content:

"This document contains information on one or more products under development at SpanSion Inc. The information is intended to help you evaluate this product. Do not design in this product without contacting the factory. SpanSion Inc. reserves the right to change or discontinue work on this proposed product without notice."

Preliminary

The Preliminary designation indicates that the product development has progressed such that a commitment to production has taken place. This designation covers several aspects of the product life cycle, including product qualification, initial production, and the subsequent phases in the manufacturing process that occur before full production is achieved. Changes to the technical specifications presented in a Preliminary document should be expected while keeping these aspects of production under consideration. SpanSion places the following conditions upon Preliminary content:

"This document states the current technical specifications regarding the SpanSion product(s) described herein. The Preliminary status of this document indicates that product qualification has been completed, and that initial production has begun. Due to the phases of the manufacturing process that require maintaining efficiency and quality, this document may be revised by subsequent versions or modifications due to changes in technical specifications."

Combination

Some data sheets will contain a combination of products with different designations (Advance Information, Preliminary, or Full Production). This type of document will distinguish these products and their designations wherever necessary, typically on the first page, the ordering information page, and pages with DC Characteristics table and AC Erase and Program table (in the table notes). The disclaimer on the first page refers the reader to the notice on this page.

Full Production (No Designation on Document)

When a product has been in production for a period of time such that no changes or only nominal changes are expected, the Preliminary designation is removed from the data sheet. Nominal changes may include those affecting the number of ordering part numbers available, such as the addition or deletion of a speed option, temperature range, package type, or V_{IO} range. Changes may also include those needed to clarify a description or to correct a typographical error or incorrect specification. SpanSion Inc. applies the following conditions to documents in this category:

"This document states the current technical specifications regarding the SpanSion product(s) described herein. SpanSion Inc. deems the products to have been in sufficient production volume such that subsequent versions of this document are not expected to change. However, typographical or specification corrections, or modifications to the valid combinations offered may occur."

Questions regarding these document designations may be directed to your local AMD or Fujitsu sales office.

S71NS-N MCP Products

MirrorBit™ I.8 Volt-only Simultaneous Read/Write, Burst-mode Multiplexed Flash Memory: 256 Mb (16 Mb x 16-bit), 128 Mb (8 Mb x 16-bit) and 64 Mb (4 Mb x 16-bit) with Burst-mode Multiplexed pSRAM: 64 Mb (4 Mb x 16-bit), 32 Mb (2 Mb x 16-bit) and 16 Mb (1 Mb x 16-bit)

**ADVANCE
INFORMATION**

General Description

The S71NS-N Series is a product line of stacked Multi-Chip Product (MCP) packages and consists of the following items:

- One or more S29NS-N flash memory die
- Mux burst-mode pSRAM

The products covered by this document are listed in the table below. For details about their specifications, please refer to their individual datasheet for further details.

		pSRAM			
		Density	16 Mb	32 Mb	64 Mb
Flash	64 Mb	S71NS064NA0			
	128 Mb	S71NS128NA0	S71NS128NB0	S71NS128NC0	
	256 Mb		S71NS256NB0	S71NS256NC0	

Distinctive Characteristics

MCP Features

- Power supply voltage of 1.7 V to 1.95 V
- Burst Speed: 66 MHz
- Package - MCP BGA: 0.5 mm ball pitch
 - 8.0 x 9.2 mm, 56 ball for NS064N and NS128N based MCPs
 - 10.0 x 11.0 mm, 60 ball for NS256N based MCPs
- Operating Temperature
 - Wireless, -25°C to +85°C

For detailed specifications, please refer to the individual data sheets:

Document	Publication Identification Number
S29NS-N	S29NS-N_00
16 M Multiplexed pSRAM Type 2	muxpsram_05
16 M Multiplexed pSRAM Type 3	muxpsram_03
32 M Multiplexed pSRAM Type 3	muxpsram_04
64 M Multiplexed pSRAM Type 3	muxpsram_01

I Ordering Information

The ordering part number is formed by a valid combination of the following:

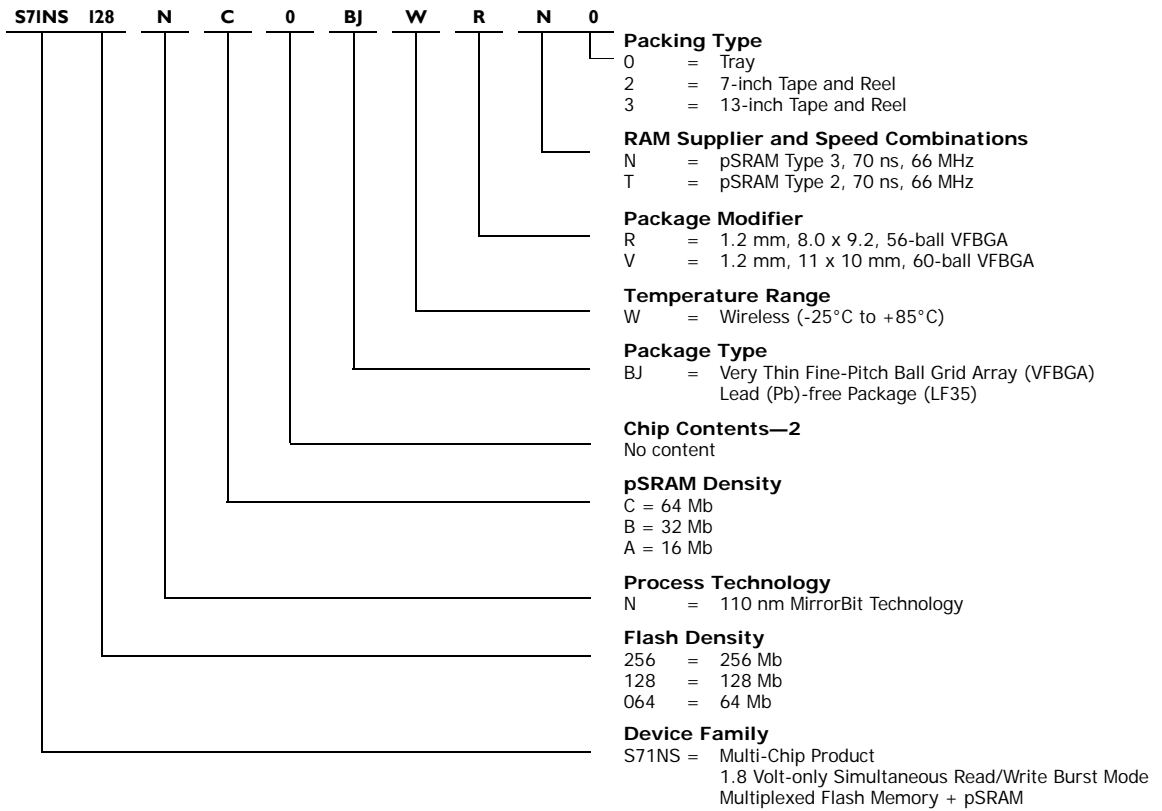

Table I.I MCP Configurations and Valid Combinations

Base Ordering Part Number (Note 2)	Package & Temperature	Model Number	Packing Type	pSRAM Type	Flash Speed Options	pSRAM Speed Options
S71NS064NA0	BJW	RT	0, 1, 2	pSRAM Type 2	66 MHz	66 MHz
		RN		pSRAM Type 3	66 MHz	66 MHz
S71NS128NA0		RN		pSRAM Type 3	66 MHz	66 MHz
S71NS128NBO		RN		pSRAM Type 3	66 MHz	66 MHz
S71NS128NCO		RN		pSRAM Type 3	66 MHz	66 MHz
S71NS256NBO		VN		pSRAM Type 3	66 MHz	66 MHz
S71NS256NCO		VN		pSRAM Type 3	66 MHz	66 MHz

Package Marking Note:

The package marking omits the leading S from the ordering part number.

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult your local sales office to confirm availability of specific valid combinations and to check on newly released combinations.

2 Input/Output Descriptions

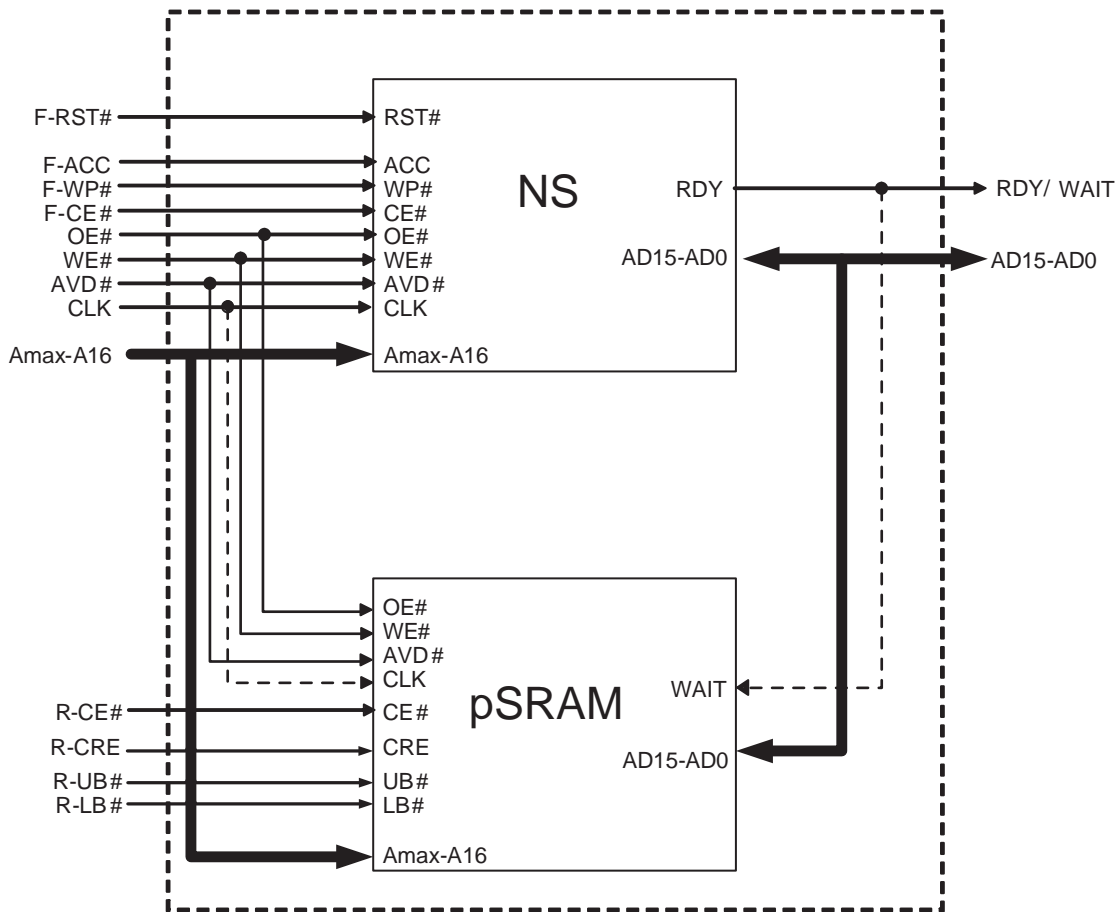

Table 2.1 identifies the input and output package connections provided on the device.

Table 2.1 Input/Output Descriptions

Symbol	Description	Flash	RAM
AMAX – A16	Address inputs	X	X
ADQ15 – ADQ0	Multiplexed Address/Data	X	X
OE#	Output Enable input. Asynchronous relative to CLK for the Burst mode.	X	X
WE#	Write Enable input.	X	X
V _{SS}	Ground	X	X
NC	No Connect; not connected internally	X	X
RDY	Ready output. Indicates the status of the Burst read. The WAIT# pin of the pSRAM is tied to RDY.	X	X
CLK	Clock input. In burst mode, after the initial word is output, subsequent active edges of CLK increment the internal address counter. Should be at V _{IL} or V _{IH} while in asynchronous mode	X	X
AVD#	Address Valid input. Indicates to device that the valid address is present on the address inputs. Low = for asynchronous mode, indicates valid address; for burst mode, causes starting address to be latched. High = device ignores address inputs	X	X
F-RST#	Hardware reset input. Low = device resets and returns to reading array data	X	
F-WP#	Hardware write protect input. At V _{IL} , disables program and erase functions in the four outermost sectors. Should be at V _{IH} for all other conditions.	X	
F-ACC	Accelerated input. At V _{IH} , accelerates programming; automatically places device in unlock bypass mode. At V _{IL} , disables all program and erase functions. Should be at V _{IH} for all other conditions.	X	
R-CE1#	Chip-enable input for pSRAM.		X
F-CE#	Chip-enable input for Flash. Asynchronous relative to CLK for Burst Mode.	X	
R-CRE	Control Register Enable (pSRAM).		X
F-VCC	Flash 1.8 Volt-only single power supply.	X	
R-VCC	pSRAM Power Supply.		X
R-UB#	Upper Byte Control (pSRAM).		X
R-LB#	Lower Byte Control (pSRAM)		X
DNU	Do Not Use		

3 MCP Block Diagram

Figure 3.1 MCP Block Diagram

Note: The CLK and WAIT signals on the pSRAM are not present on the pSRAM Type 2: therefore, for those MCP's, those signals will only be connected to the NS flash, but not to the pSRAM. Also, on this pSRAM, the CRE signal will not be present at all.

4 Connection Diagrams/Physical Dimensions

This section contains the I/O designations and package specifications for the S71NS-N.

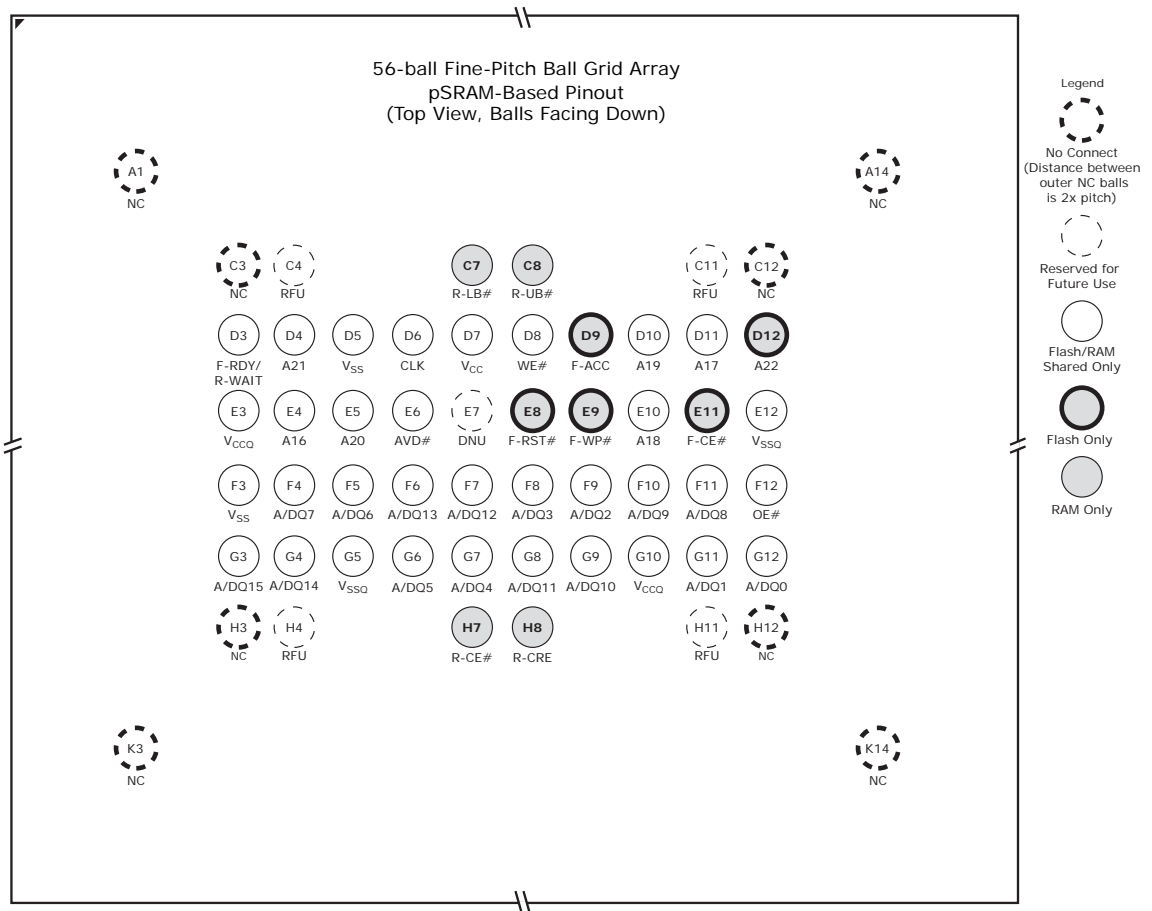

4.1 Special Handling Instructions for FBGA Packages

Special handling is required for Flash Memory products in FBGA packages.

Flash memory devices in FBGA packages may be damaged if exposed to ultrasonic cleaning methods. The package and/or data integrity may be compromised if the package body is exposed to temperatures above 150°C for prolonged periods of time.

4.2 Connection Diagrams

4.2.1 pSRAM Based Pinout, 56-Ball, VFBGA

Notes:

- Addresses are shared between Flash and RAM depending on the density of the pSRAM.
- CLK and WAIT signals are Flash only for the S71NS064NAO-RT, while on that MCP, the CRE signal won't exist.

MCP	Flash-Only Addresses	Shared Addresses	Shared ADQ Pins
S71NS128NCO	A22	A21-A16	ADQ15 – ADQ0
S71NS128NB0	A22-A21	A20-A16	ADQ15 – ADQ0
S71NS128NA0	A22-A20	A19-A16	ADQ15 – ADQ0
S71NS064NA0	A21-A20	A19-A16	ADQ15 – ADQ0

Figure 4.1 pSRAM Based Pinout, 56-Ball, VFBGA

4.2.2 pSRAM Based Pinout, 60-Ball, VFBGA

Note: Addresses are shared between Flash and RAM depending on the density of the pSRAM.

MCP	Flash-Only Addresses	Shared Addresses	Shared ADQ Pins
S71NS256NCO	A23-A22	A21-A16	ADQ15 – ADQ0
S71NS256NBO	A23-A21	A20-A16	ADQ15 – ADQ0

4.3 Physical Dimensions

4.3.1 NLB056—9.2 x 8.0 mm, 56-ball VFBGA

NOTES:

1. DIMENSIONING AND TOLERANCING METHODS PER ASME Y14.5M-1994.
2. ALL DIMENSIONS ARE IN MILLIMETERS.
3. BALL POSITION DESIGNATION PER JEP95, SECTION 4.3, SPP-010.
4. [e] REPRESENTS THE SOLDER BALL GRID PITCH.
5. SYMBOL "MD" IS THE BALL MATRIX SIZE IN THE "D" DIRECTION.
SYMBOL "ME" IS THE BALL MATRIX SIZE IN THE "E" DIRECTION.
n IS THE NUMBER OF POPULATED SOLDER BALL POSITIONS FOR MATRIX SIZE MD X ME.
6. DIMENSION "b" IS MEASURED AT THE MAXIMUM BALL DIAMETER IN A PLANE PARALLEL TO DATUM C.
7. SD AND SE ARE MEASURED WITH RESPECT TO DATUMS A AND B AND DEFINE THE POSITION OF THE CENTER SOLDER BALL IN THE OUTER ROW.
WHEN THERE IS AN ODD NUMBER OF SOLDER BALLS IN THE OUTER ROW SD OR SE = 0.000.
WHEN THERE IS AN EVEN NUMBER OF SOLDER BALLS IN THE OUTER ROW, SD OR SE = [e/2]
8. "+" INDICATES THE THEORETICAL CENTER OF DEPOPULATED BALLS.
9. A1 CORNER TO BE IDENTIFIED BY CHAMFER, LASER OR INK MARK, METALLIZED MARK INDENTATION OR OTHER MEANS.
10. OUTLINE AND DIMENSIONS PER CUSTOMER REQUIREMENT.

5 Revisions

Revision A0 (January 3, 2006)

Initial Release under Publication Identification Number S71NS128NC0_01

Revision A1 (March 1, 2006)

Changed the Publication Identification Number from S71NS128NC0_01 to S71NS-N_00

Added the MCP S71NS064NA0

Revision A2 (June 13, 2006)

Corrected the grid reference for 56-ball connection diagram

Revision A3 (October 10, 2006)

Added the S71NS064NA0-RT - the one using pSRAM Type 2

Colophon

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for any use that includes fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for any use where chance of failure is intolerable (i.e., submersible repeater and artificial satellite). Please note that Spansion Inc. will not be liable to you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products. Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions. If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the US Export Administration Regulations or the applicable laws of any other country, the prior authorization by the respective government entity will be required for export of those products.

Trademarks and Notice

The contents of this document are subject to change without notice. This document may contain information on a Spansion Inc. product under development by Spansion Inc. Spansion Inc. reserves the right to change or discontinue work on any product without notice. The information in this document is provided as is without warranty or guarantee of any kind as to its accuracy, completeness, operability, fitness for particular purpose, merchantability, non-infringement of third-party rights, or any other warranty, express, implied, or statutory. Spansion Inc. assumes no liability for any damages of any kind arising out of the use of the information in this document.
