The JXP Series 10 Gb/s 850 nm XFP Transceiver is an integrated fiberoptic transceiver that provides a high-speed serial link at signaling rates from 9.95 Gb/s to 11.10 Gb/s. The module complies with IEEE 802.3ae 10GBASE-SR (Ethernet) and 10 GFC 1200-MX-SN-I (Fibre Channel) standards, as well as with the XFP Transceiver Multisource Agreement (MSA). The 10 Gb/s 850 nm XFP Transceiver is protocol-agnostic and can be used for Ethernet or Fibre Channel systems, thereby lowering customer inventory requirements and costs.

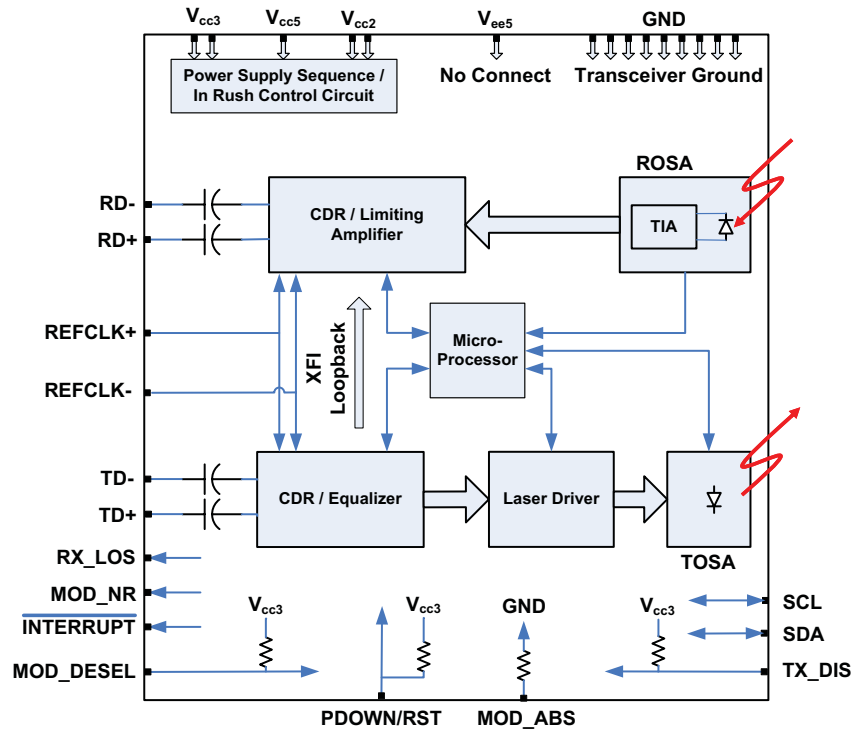

The 10 Gb/s 850 nm XFP Transceiver integrates receive and transmit paths in one package and is designed for reliability and performance. On the transmit side, the 10 Gb/s serial data stream is recovered, retimed, and passed to a laser driver. The laser driver biases and modulates an 850 nm VCSEL, enabling data transmission at distances of up to 300 m over multimode fiber (MMF) through an industry standard LC connector. On the receive side, the 10 Gb/s optical data stream is recovered from a PIN photodetector/transimpedance amplifier, retimed, and passed to an output driver. This module features a hot-pluggable XFI compliant electrical interface.
