54FCT373 Octal Transparent Latch with TRI-STATE Outputs

National Semiconductor

## 54FCT373 **Octal Transparent Latch with TRI-STATE® Outputs**

#### **General Description**

**Features** 

The 'FCT373 consists of eight latches with TRI-STATE outputs for bus organized system applications. The flip-flops appear transparent to the data when Latch Enable (LE) is HIGH. When LE is LOW, the data that meets the setup times is latched. Data appears on the bus when the Output Enable  $(\overline{OE})$  is LOW. When  $\overline{OE}$  is HIGH the bus output is in the high impedance state.

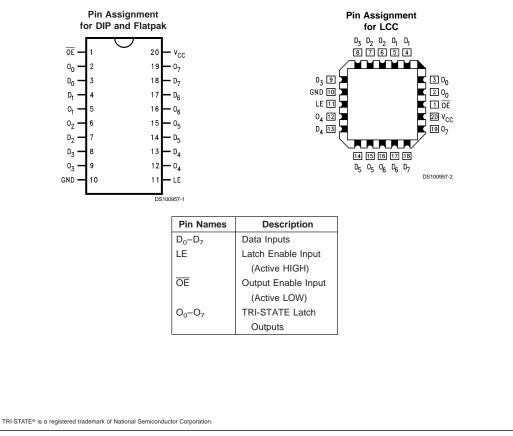

#### TRI-STATE outputs for bus interfacing

- TTL input and output level compatible
- CMOS power consumption
- Output sink capability of 32 mA, source capability of 12 mA
- Standard Microcircuit Drawing (SMD) 5962-8764401

#### **Ordering Code**

| Military     | Package Number | Package Description                           |
|--------------|----------------|---|
| 54FCT373DMQB | J20A           | 20-Lead Ceramic Dual-In-Line                  |
| 54FCT373FMQB | W20A           | 20-Lead Cerpack                               |
| 54FCT373LMQB | E20A           | 20-Lead Ceramic Leadless Chip Carrier, Type C |

### **Connection Diagrams**

# 54FCT373

#### **Functional Description**

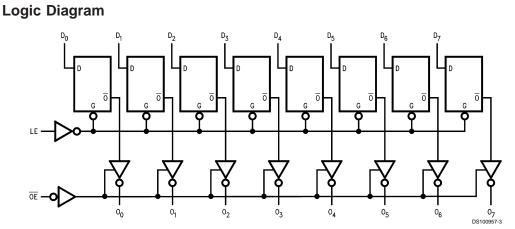

The 'FCT373 contains eight D-type latches with TRI-STATE output buffers. When the Latch Enable (LE) input is HIGH, data on the  $D_n$  inputs enters the latches. In this condition the latches are transparent, i.e., a latch output will change state each time its D input changes. When LE is LOW, the latches store the information that was present on the D inputs a setup time preceding the HIGH-to-LOW transition of LE. The TRI-STATE buffers are controlled by the Output Enable ( $\overline{OE}$ ) input. When  $\overline{OE}$  is LOW, the buffers are in the bi-state mode. When  $\overline{OE}$  is HIGH the buffers are in the high impedance mode but this does not interfere with entering new data into the latches.

| Inputs |                   |   | Output                     |  |
|--------|-------------------|---|----------------------------|--|
| LE     | OE D <sub>n</sub> |   | O <sub>n</sub>             |  |
| Н      | L                 | Н | Н                          |  |
| н      | L                 | L | L                          |  |
| L      | L                 | Х | O <sub>n</sub> (no change) |  |
| Х      | н                 | Х | Z                          |  |

H = HIGH Voltage Level L = LOW Voltage Level

X = Immaterial

Z = High Impedance State

Please note that this diagram is provided only for the understanding of logic operations and should not be used to estimate propagation delays.

Notes

#### LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
