

POSITIVE VOLTAGE REGULATOR

3- TERMINAL 1A POSITIVE VOLTAGE REGULATORS

IL78xx

The IL78xx series of three-terminal positive regulators are available in the TO-220, TO-252, TO-263 package and with several fixed output voltage, marking them useful in a wide range of applications. These applications include on-card regulation for elimination of noise and distribution problems associated with single point regulation with single point regulation. In addition, they can be used with power pass elements to make high current voltage regulators. If adequate heat sinking is provided, each of these regulator can deliver over 1A of output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltage and currents.

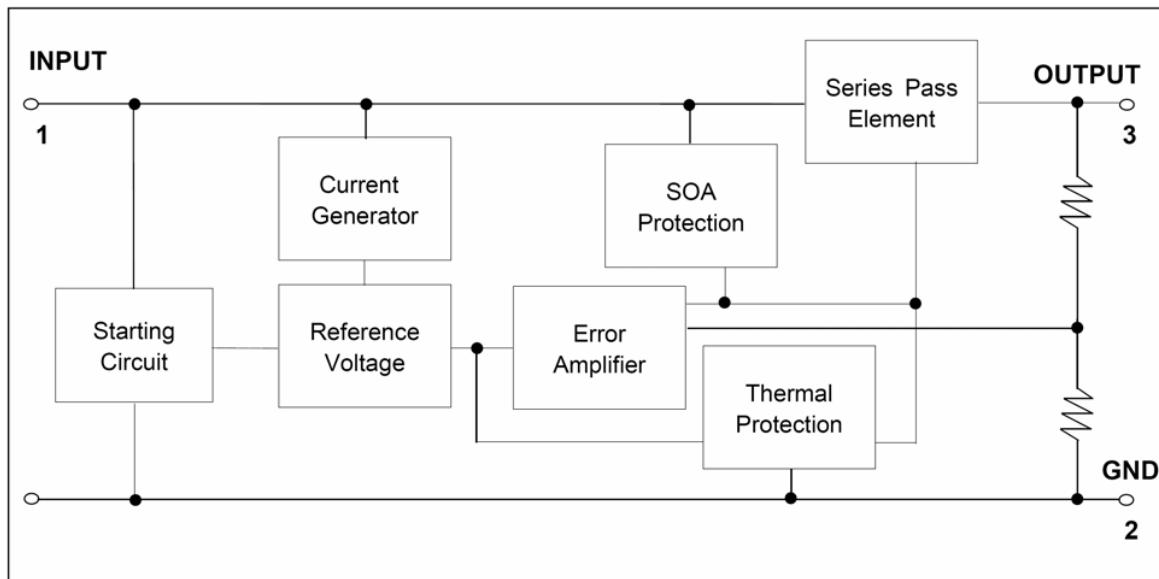

FEATURES

- Output current up to 1A
- No external components required
- Internal short circuit current limiting
- Internal thermal overload protection
- Output transistor safe-area compensation
- Output voltage offered in 4% tolerance

Notes :

- (1) To specify an output voltage, substitute voltage value for "XX"
- (2) Ci is required if regulator is located in appreciable distance from power supply filter.
- (3) Co improves stability and transient response.

Short circuit current	I_{sc}	$V_i = 35\text{V}$, $T_a = 25^\circ \text{C}$			230		mA

* Load and line regulation are specified at constant junction temperature. Changes in V_o due to heating effects must be taken into account separately. Pulse testing with low duty is used.

DC Parameters

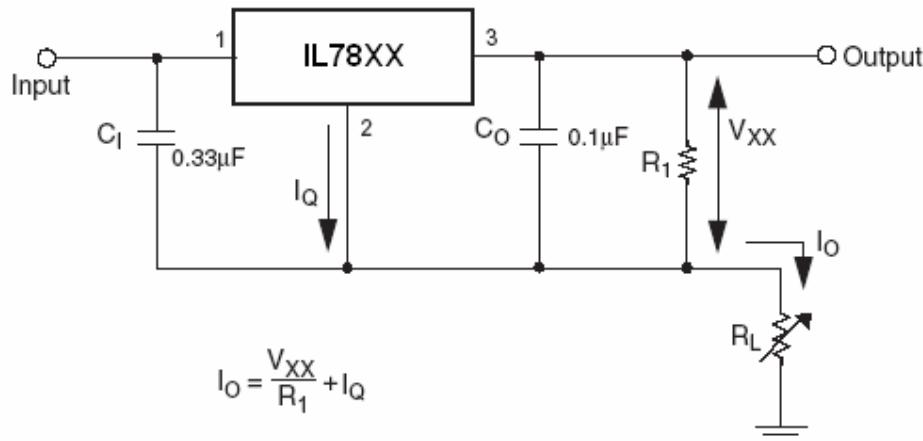

Load Regulation

Ripple Rejection

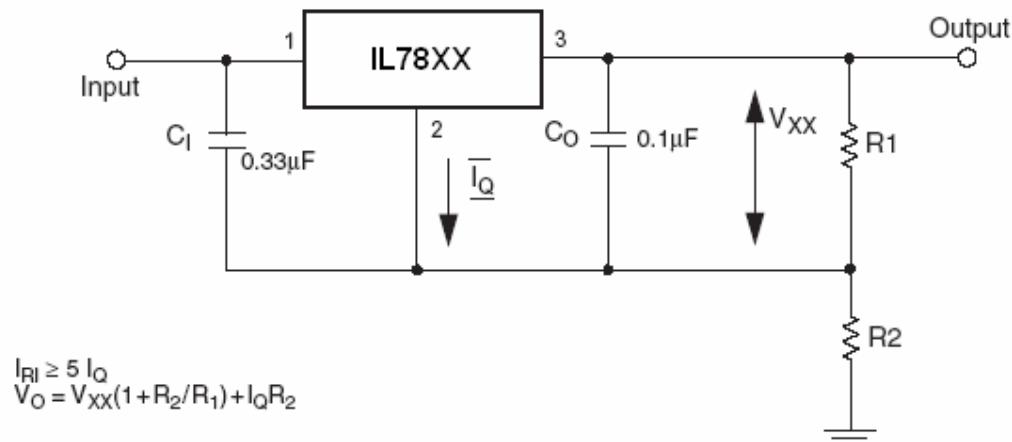

Fixed Output Regulator

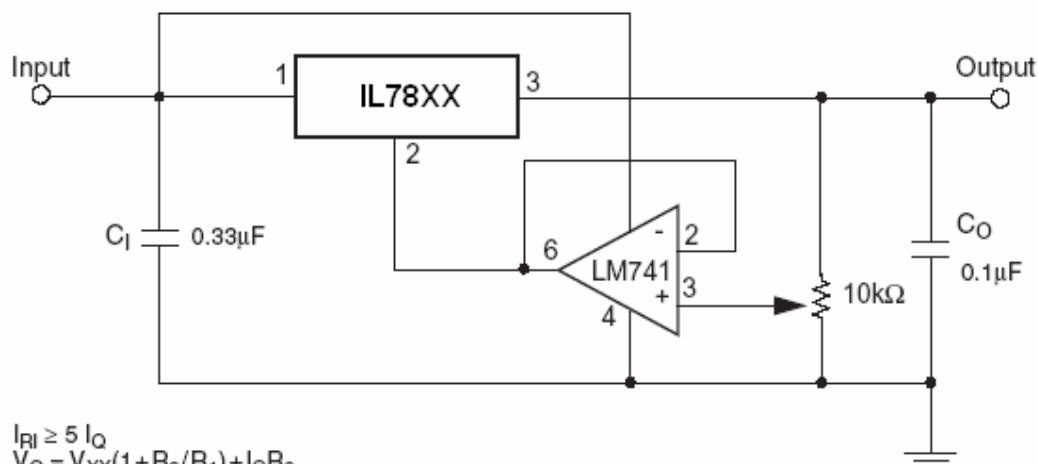

$$I_O = \frac{V_{XX}}{R_1} + I_Q$$

Notes:

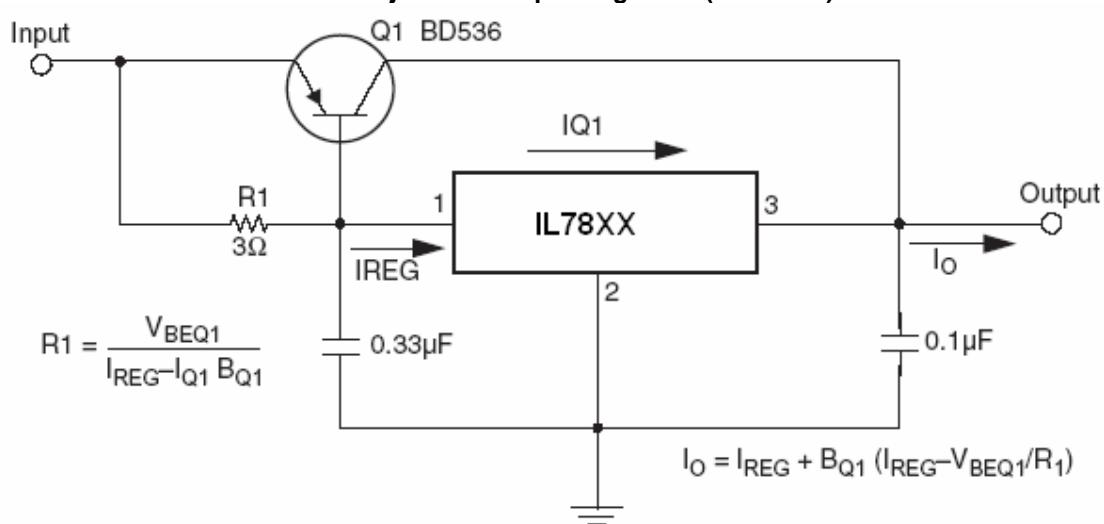

1. To specify an output voltage, substitute voltage value for "XX." A common ground is required between the input and the output voltage. The input voltage must remain typically 2.0V above the output voltage even during the low point on the input ripple voltage.
2. CI is required if regulator is located an appreciable distance from power supply filter.
3. CO improves stability and transient response.

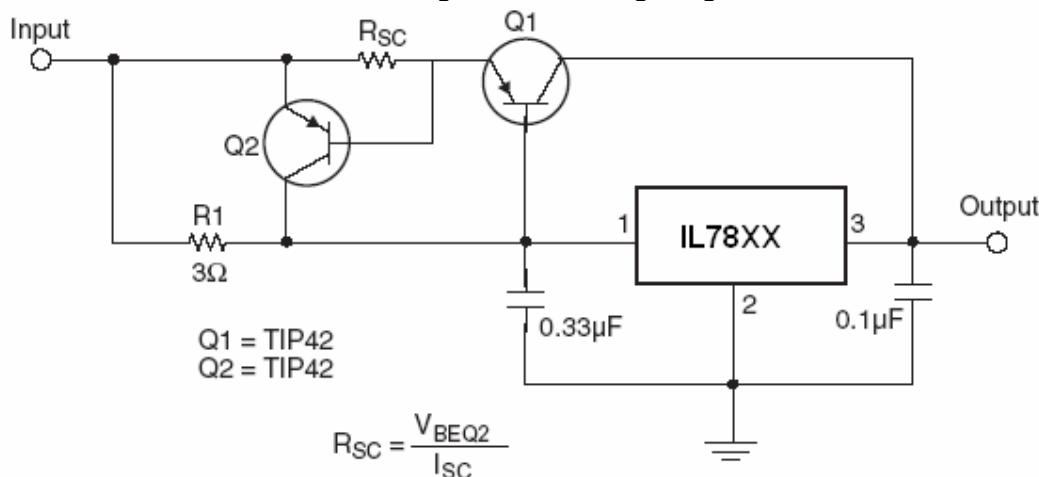

Circuit for Increasing Output Voltage

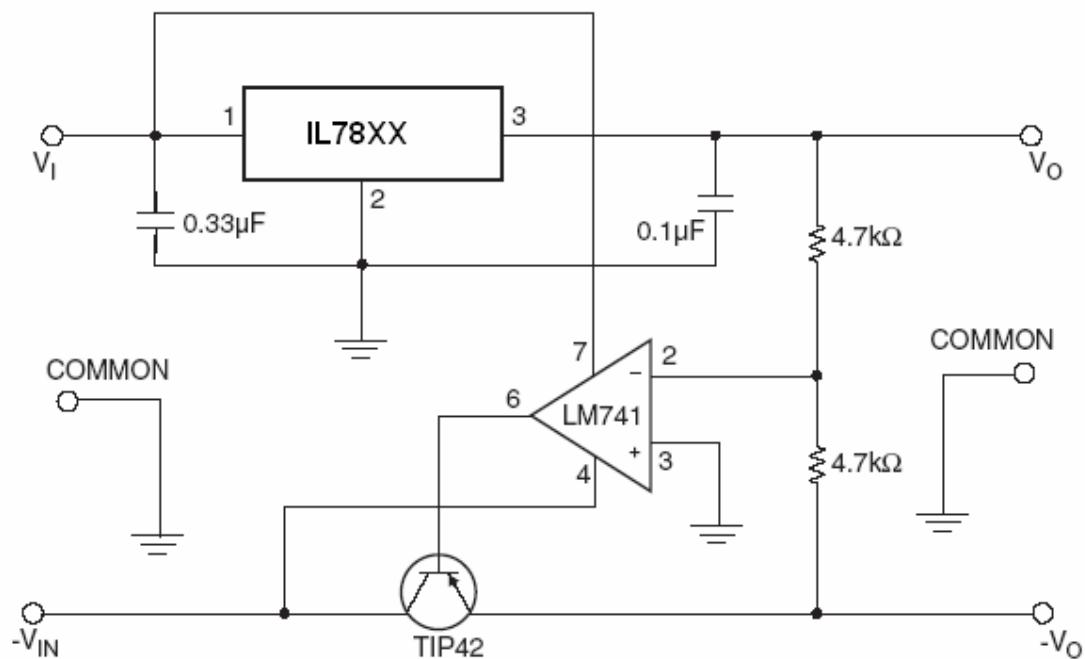

Adjustable Output Regulator (7V to 30V)

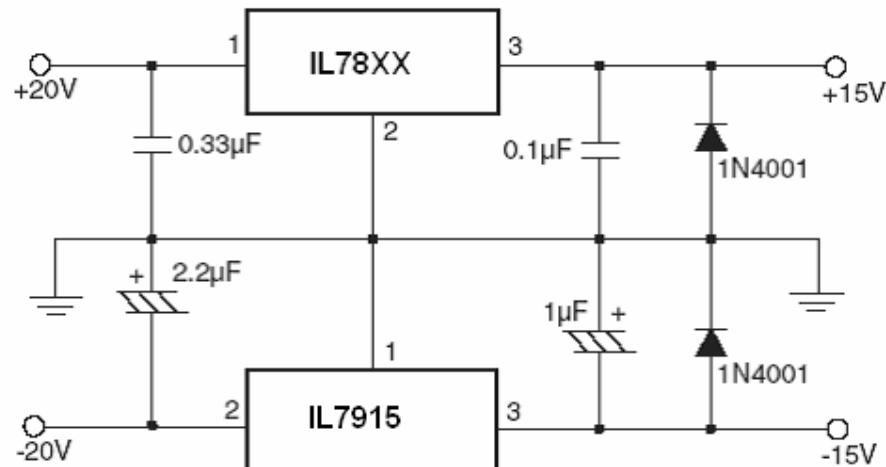

High Current Voltage Regulator

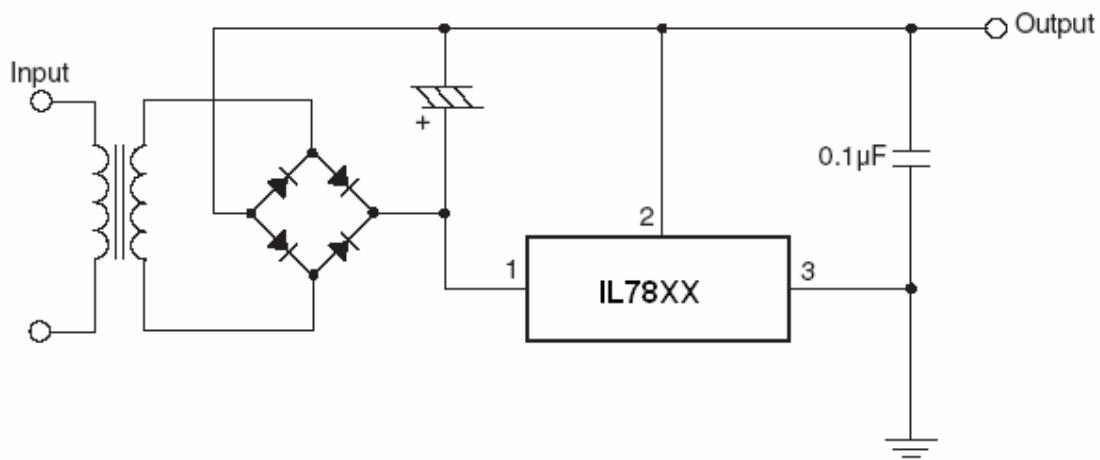

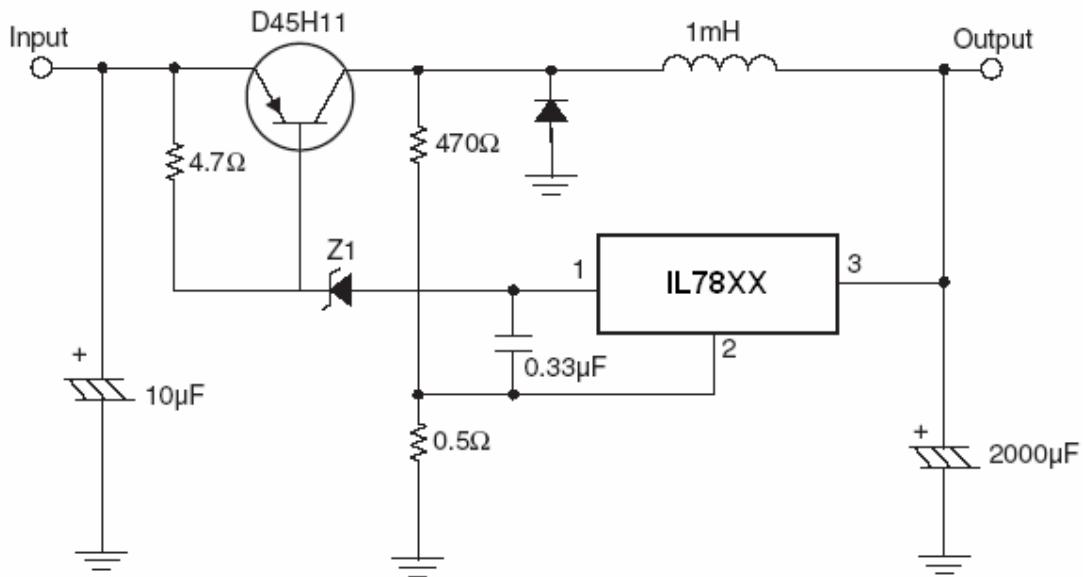

High Output Current with Short Circuit Protection

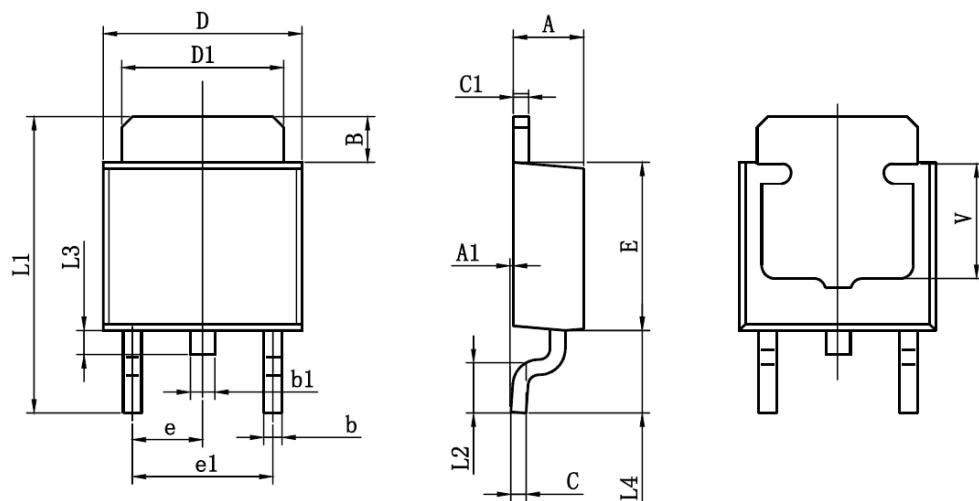

Tracking Voltage Regulator

Split Power Supply ($\pm 15V - 1A$)
