LC151X01  
Liquid Crystal Display

## Product Specification

## **RECORD OF REVISIONS**

## 1. General Description

The LC151X01 is a Color Active Matrix Liquid Crystal Display with an integral Cold Cathode Fluorescent Lamp(CCFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally white mode. This TFT-LCD has a 15.1 inch diagonally measured active display area with XGA resolution (768 vertical by 1024 horizontal pixel array). Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,2M colors with 6Bit FRC algorithm.

The LC151X01 has been designed to apply the 8Bit LVDS interface.

The LC151X01 is intended to support LCD TV, PCTV where high brightness, wide viewing angle, high color saturation, and high color are important.

## General Features

|                        |   |
|------------------------|---|
| Active Screen Size     | 15.1 inches(38.4cm) diagonal  |
| Outline Dimension      | 352(H) x 263.5(V) x 18.0(D) mm(Typ.)                                      |
| Pixel Pitch            | 0.300mm x 0.300mm   |
| Pixel Format           | 1024 horiz. By 768 vert. Pixels RGB strip arrangement                     |
| Color Depth            | 6bit FRC algorithm, 16.2 M colors   |
| Luminance, White       | 400 cd/m <sup>2</sup> (Center 1 points typ.)                              |
| Power Consumption      | Total 18.7 Watt(Typ.)   |
| Weight                 | 1,750 g (typ.)  |
| Display Operating Mode | Transmissive mode, normally white   |
| Surface Treatment      | Hard coating(3H) & Anti-glare (Haze 13%) treatment of the front polarizer |

## Product Specification

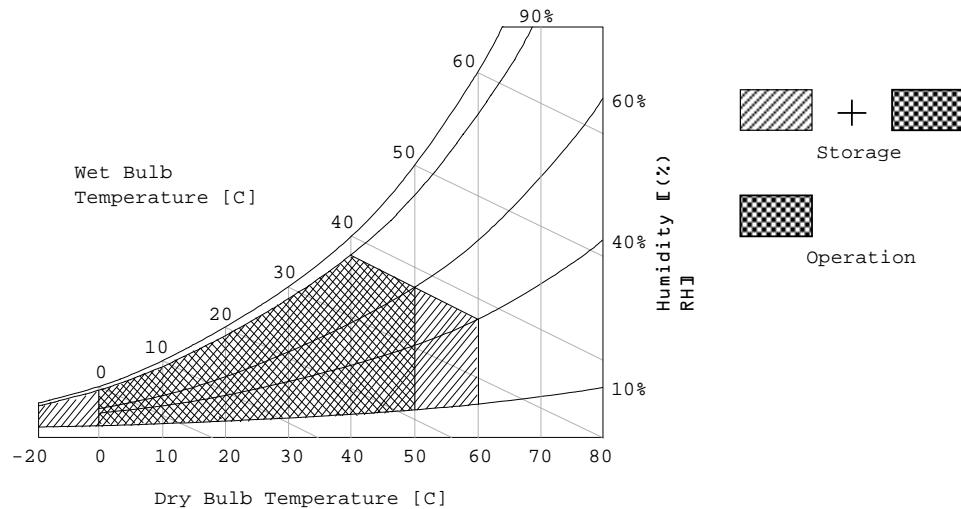

## 2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

**Table 1. ABSOLUTE MAXIMUM RATINGS**

| Parameter                  | Symbol | Values |     | Units            | Notes                       |
|----------------------------|--------|--------|-----|------------------|-----------------------------|
|                            |        | Min    | Max |                  |                             |
| Power Input Voltage        | Vcc    | -0.3   | 5.8 | Vdc              | at $25 \pm 3^\circ\text{C}$ |
| Operating Temperature      | TOP    | 0      | 50  | $^\circ\text{C}$ | 1                           |
| Storage Temperature        | HST    | -20    | 60  | $^\circ\text{C}$ | 1                           |
| Operating Ambient Humidity | HOP    | 10     | 90  | %RH              | 1                           |
| Storage Humidity           | Hst    | 10     | 90  | %RH              | 1                           |

Note : 1. Temperature and relative humidity range are shown in the figure below.  
 Wet bulb temperature should be  $39^\circ\text{C}$  Max, and no condensation of water.

## Product Specification

### 3. Electrical Specifications

#### 3-1. Electrical Characteristics

The LC151X01 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the CCFL, is typically generated by an inverter. The inverter is an external unit to the LCDs.

Table 2. ELECTRICAL CHARACTERISTICS

| Parameter                    | Symbol | Values   |          |          | Unit | Notes |
|------------------------------|--------|----------|----------|----------|------|-------|
|                              |        | Min      | Typ      | Max      |      |       |
| <b>MODULE :</b>              |        |          |          |          |      |       |

| Discharge Stabilization Time | Ts     |          |          | 3        | Min  | 6     |
| Power Consumption            | PBL    |          | 17.3     | 19.0     | Watt | 5     |
| Life Time                    |        | 50,000   |          |          | Hrs  | 6     |

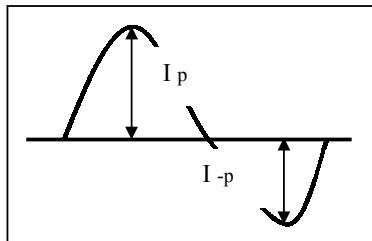

Note : The design of the inverter must have specifications for the lamp in LCD Assembly.

The performance of the Lamp in LCM, for example life time or brightness, is extremely influenced by the characteristics of the DC-AC inverter. So all the parameters of an inverter should be carefully designed so as not to produce too much leakage current from high-voltage output of the inverter. When you design or order the inverter, please make sure unwanted lighting caused by the mismatch of the lamp and the inverter (no lighting, flicker, etc) never occurs. When you confirm it, the LCD – Assembly should be operated in the same condition as installed in your instrument.

1. The specified current and power consumption are under the  $V_{CC}=5.0V$ ,  $25^{\circ}C$ ,  $f_V=60Hz$  condition whereas mosaic pattern( $8 \times 6$ ) is displayed and  $f_V$  is the frame frequency.
2. The duration of rush current is about 2ms and rising time of Power Input is 1ms(min.).
3. The variance of the voltage is  $\pm 10\%$ .
4. The voltage above  $V_s$  should be applied to the lamps for more than 1 second for start-up. Otherwise, the lamps may not be turned on. The used lamp current is the lamp typical current.

## Product Specification

5. The output of the inverter must have symmetrical(negative and positive) voltage waveform and symmetrical current waveform.(Unsymmetrical ratio is less than 10%) Please do not use the inverter which has unsymmetrical voltage and unsymmetrical current and spike wave.  
 Lamp frequency may produce interface with horizontal synchronous frequency and as a result this may cause beat on the display. Therefore lamp frequency shall be as away possible from the horizontal synchronous frequency and from its harmonics in order to prevent interference.
6. Let.  $s$  define the brightness of the lamp after being lighted for 5 minutes as 100%.  
 $T_s$  is the time required for the brightness of the center of the lamp to be not less than 95%.
7. The lamp power consumption shown above does not include loss of external inverter.  
 The used lamp current is the lamp typical current.
8. The life is determined as the time at which brightness of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at  $25 \pm 2^\circ\text{C}$ .
9. Requirements for a system inverter design, which is intended to have a better display performance, a better power efficiency and a more reliable lamp, are following.  
 It shall help increase the lamp lifetime and reduce leakage current.
  - a. The asymmetry rate of the inverter waveform should be less than 10%.
  - b. The distortion rate of the waveform should be within  $\pm 2 \pm 10\%$ .  
 \* Inverter output waveform had better be more similar to ideal sine wave.

\* Asymmetry rate:

$$|I_p - I_{-p}| / I_{rms} * 100\%$$

\* Distortion rate

$$I_p (\text{or } I_{-p}) / I_{rms}$$

- Do not attach a conducting tape to lamp connecting wire.  
 If the lamp wire attach to a conducting tape, TFT-LCD Module has a low luminance and the inverter has abnormal action. Because leakage current is occurred between lamp wire and conducting tape.

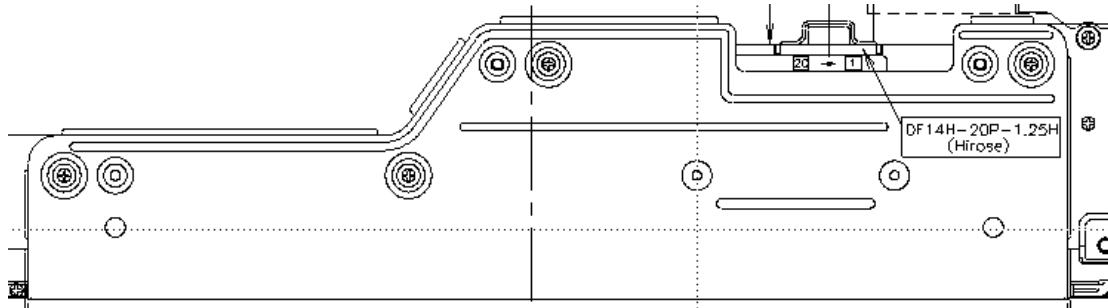

## Product Specification

### 3-2. Interface Connections

- LCD Connector(CN1) : DF14H-20P-1.25H (Manufactured by Hirose or compatibles )
- Mating Connector : DF14H-20S-1.25H (Manufactured by Hirose or compatibles )

**Table 3. MODULE CONNECTOR(CN1) PIN CONFIGURATION**

| Pin No | Symbol    | Description                   | Polarity | Output Pin #<br>(LVDS Tx) |
|--------|-----------|-------------------------------|----------|---------------------------|

## Product Specification

### 3-3. Signal Timing Specifications

This is the signal timing required at the input of the LVDS Transmitter. All of the interface signal timing should be satisfied with the following specifications for its proper operation.

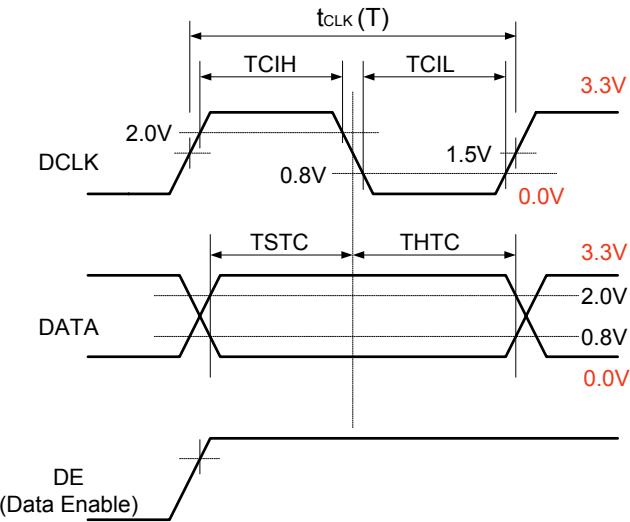

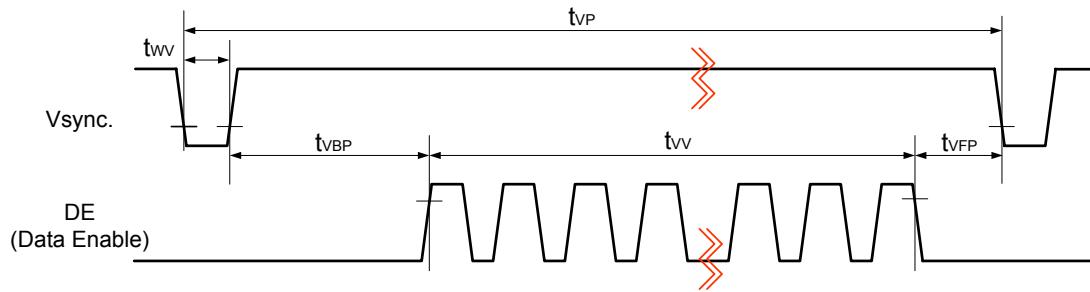

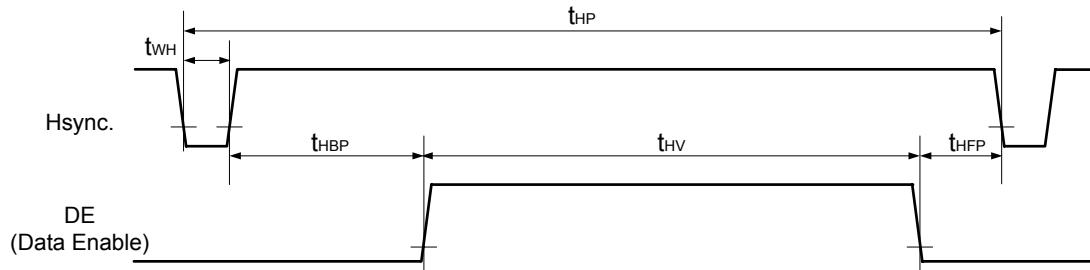

**Table 6. Timing Table**

| ITEM                   | Symbol                 |      | Min  | Typ   | Max      | Unit | Note                                       |
|------------------------|------------------------|------|------|-------|----------|------|--|
| DCLK                   | Period                 | tCLK | 14.3 | 15.4  | 20.0     | ns   |  |
|                        | Frequency              | -    | 50   | 65    | 70       | MHz  |  |
| Hsync                  | Period                 | tHP  | 1208 | 1344  | 1368     | tCLK |  |
|                        | Frequency              | fH   | 37   | 48.36 | 52       | KHz  |  |
|                        | Width                  | tWH  | 8    | 136   | -        | tCLK |  |
| Vsync                  | Period                 | tVP  | 774  | 806   | 830      | tHP  | Note 1)<br>PAL : 47~53Hz<br>NTSC : 57~63Hz |
|                        | Frequency              | fV   | 47   | 60    | 63       | Hz   |  |
|                        | Width                  | tWV  | 2    | 6     | -        | tHP  |  |
| DE<br>(Data<br>Enable) | Horizontal Valid       | tHV  | 1024 | 1024  | 1024     | tCLK | tWH +<br>tWH + tHBP + tHFP                 |
|                        | Horizontal Back Porch  | tHBP | 8    | 160   |          |      |  |
|                        | Horizontal Front Porch | tHFP | 8    | 24    |          |      |  |
|                        | Horizontal Blank       | -    | 24   | 320   | tHP- tHV |      |  |
|                        | Vertical Valid         | tVV  | 768  | 768   | 768      | tHP  | tWV +<br>tWV + tVBP + tVFP                 |
|                        | Vertical Back Porch    | tVBP | 2    | 29    |          |      |  |
|                        | Vertical Front Porch   | tVFP | 1    | 3     |          |      |  |
|                        | Vertical Blank         | -    | 5    | 38    | tVP- tVV |      |  |

**Note:** Hsync Period and Hsync Width-Active should be even number times of tCLK. If the value is odd number times of tCLK, display control signal can be asynchronous. In order to operate this LCM a Hsync, Vsync and DE(data enable) signals should be used.

**Note1)** : The performance of the electro-optical characteristics are may be influenced by variance of the vertical refresh rates.

### 3-4. Signal Timing Waveforms

| Symbol | Parameter              | MIN   | TYP  | MAX   | Unit |
|--------|------------------------|-------|------|-------|------|
| TCIH   | TxCLK IN High Time     | 0.35T | 0.5T | 0.65T | ns   |
| TCIL   | TxCLK IN Low Time      | 0.35T | 0.5T | 0.65T | ns   |
| TSTC   | TxIN setup to TxCLK IN | 2.5   |      |       | ns   |
| THTC   | TxIN Hold to TxCLK IN  | 0     |      |       | ns   |

Note : Refer to DS90C385 specification for more detail information

## Product Specification

### 3-5. Color Data Reference

The table below provides a reference for color versus data output for displays based on 6 Bit FRC algorithm.

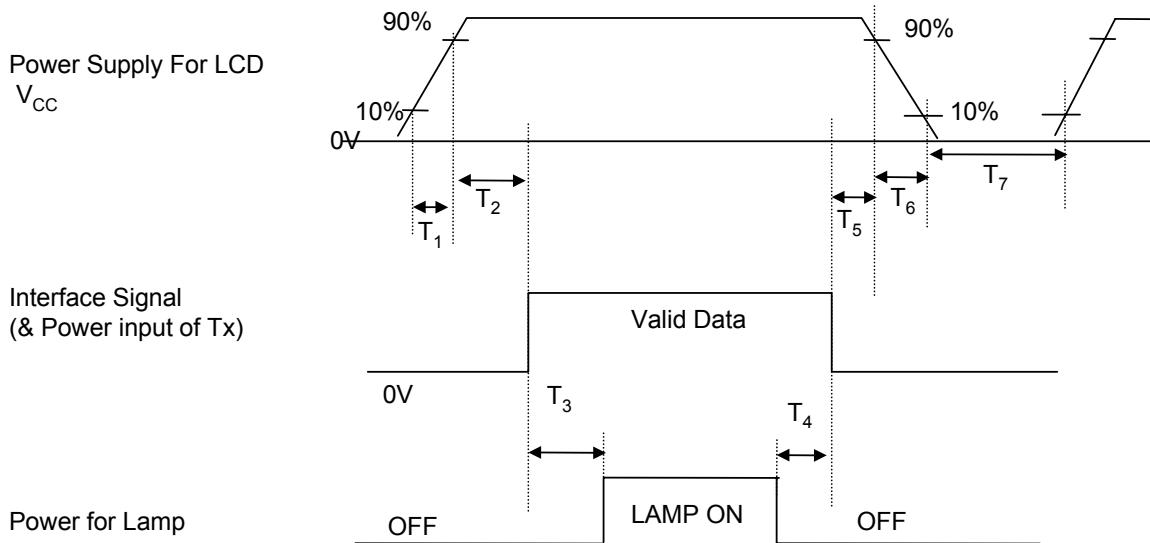

**Table 7. COLOR DATA REFERENCE**

| Color       |             | Input Color Data |     |     |     |     |     |     |     |       |     |     |     |     |     |     |     |      |     |     |     |     |     |     |  |
|-------------|-------------|------------------|-----|-----|-----|-----|-----|-----|-----|-------|-----|-----|-----|-----|-----|-----|-----|------|-----|-----|-----|-----|-----|-----|--|

**Note :** Users should be input true 8 Bit data streams via LVDS transmitter.

## Product Specification

### 3-6. Power Sequence

| Parameter | Values |     |     | Units |
|-----------|--------|-----|-----|-------|
|           | Min    | Typ | Max |       |
| T1        | -      | -   | 10  | ms    |
| T2        | 0.5    | -   | 50  | ms    |
| T3        | 200    | -   | -   | ms    |
| T4        | 200    | -   | -   | ms    |
| T5        | 0.5    | -   | 50  | ms    |
| T6        | -      | -   | 10  | ms    |
| T7        | 400    | -   | -   | ms    |

- Notes :
1. Please avoid floating state of interface signal at invalid period.
  2. When the interface signal is invalid, be sure to pull down the power supply for LCD  $V_{CC}$  to 0V.
  3. Lamp power must be turn on after power supply for LCD and interface signal are valid.

## Product Specification

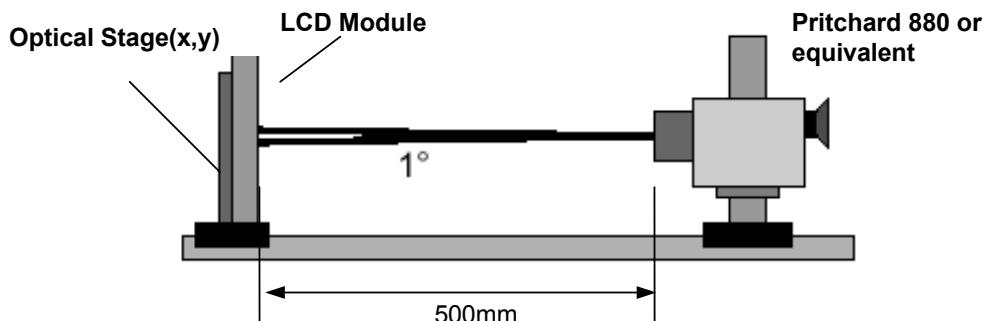

#### 4. Optical Specification

Optical characteristics are determined after the unit has been ON, and stable for approximately 30 minutes in a dark environment at 25 °C. The values specified are at an approximate distance 50cm from the LCD surface

at a viewing angle of  $\phi$  and  $\theta$  equal to 0 °.

FIG. 1 presents additional information concerning the measurement equipment and method.

**FIG. 1 Optical Characteristic Measurement Equipment and Method**

## Product Specification

Notes 1. Contrast Ratio(CR) is defined mathematically as :

$$\text{Contrast Ratio} = \frac{\text{Surface Luminance with all white pixels}}{\text{Surface Luminance with all black pixels}}$$

2. Surface luminance is luminance value at point 1 across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG 2.

When  $I_{BL}=8\text{mA}$ ,  $L_{WH}=330\text{cd/m}^2(\text{Min.})$   $400\text{cd/m}^2(\text{Typ.})$

$L_{WH} = L_{on1}$ , Where  $L_{on1}$  is the luminance with all pixels displaying white at center 1 location.

3. The variation in surface luminance ,  $\delta$  WHITE is defined as :

$\delta$ WHITE = Maximum( $L_{on1}, L_{on2}, L_{on3}, \dots, L_{on5}$ ) / Minimum( $L_{on1}, L_{on2}, L_{on3}, \dots, L_{on5}$ )

Where  $L_{on1}$  to  $L_{on5}$  are the luminance with all pixels displaying white at 5 locations

4. Response time is the time required for the display to transition from to black(Rise Time,  $Tr_R$ ) and from black to white(Decay Time,  $Tr_D$ ). For additional information see FIG 3.

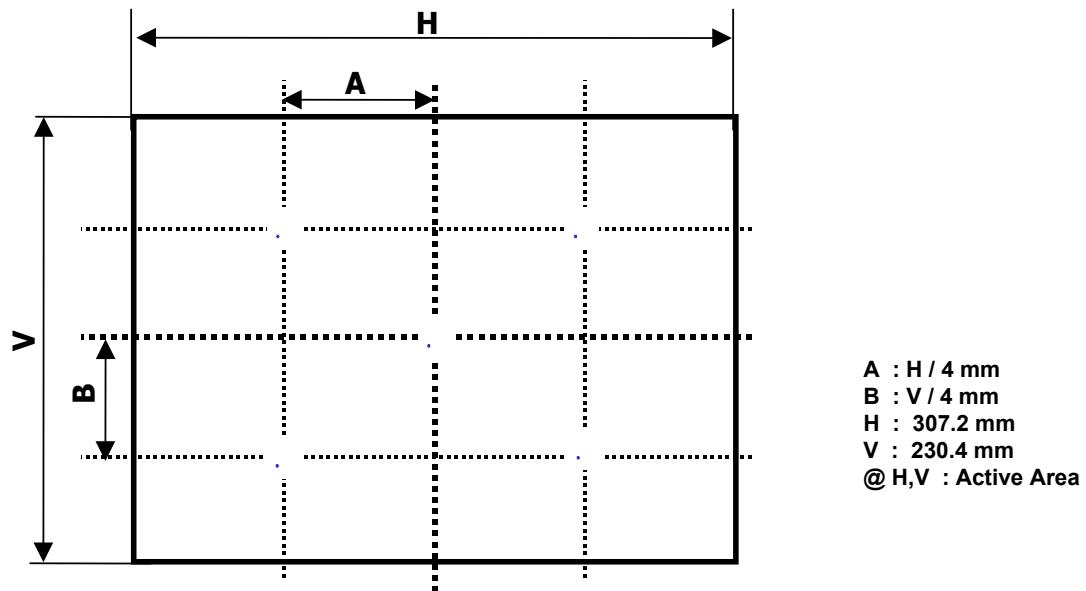

5. Viewing angle is the angle at which the contrast ratio is greater than 5. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG 4.

6. Gray scale specification

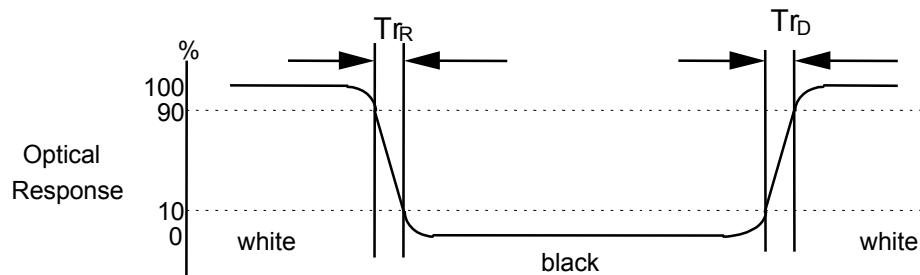

| Gray Level | Luminance [%] (Typ) |
|------------|---------------------|
| L0         | 0.22                |
| L15        | 0.36                |
| L31        | 0.85                |
| L47        | 2.13                |
| L63        | 4.30                |
| L79        | 7.43                |
| L95        | 11.4                |
| L111       | 16.4                |
| L127       | 22.1                |
| L143       | 28.7                |
| L159       | 36.5                |
| L175       | 45.2                |
| L191       | 55.9                |
| L207       | 66.9                |
| L223       | 79.0                |
| L239       | 91.2                |
| L255       | 100                 |

**FIG. 2 Luminance**

&lt;measuring point for surface luminance &amp; measuring point for luminance variation&gt;

**FIG. 3 Response Time**

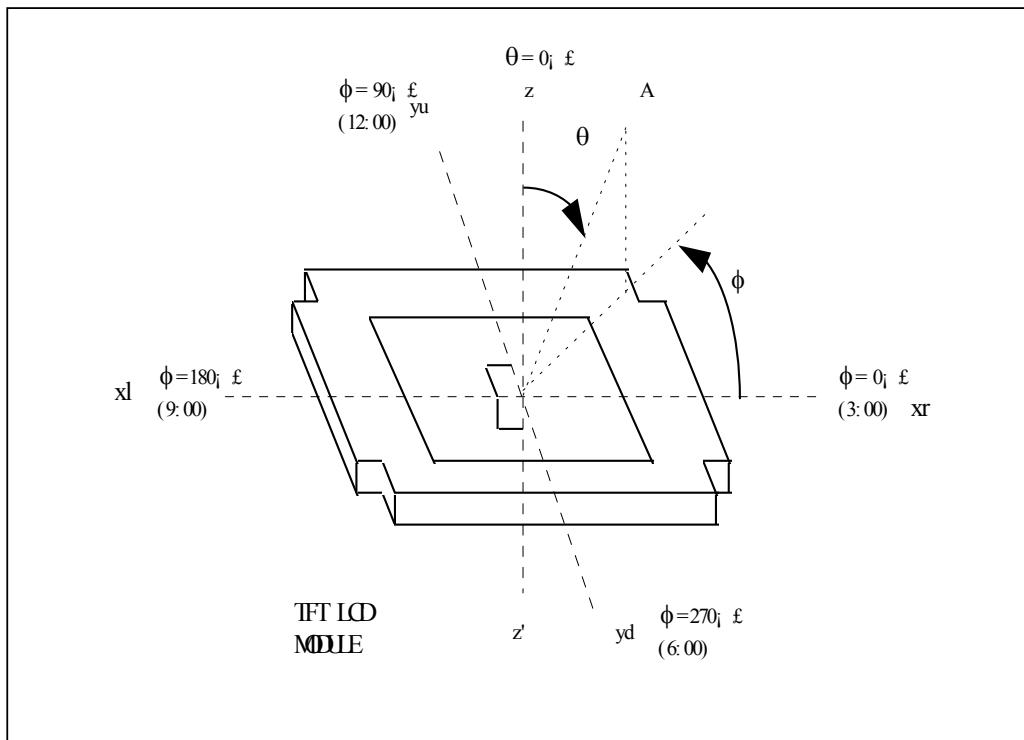

The response time is defined as the following figure and shall be measured by switching the input signal for . black. and . white. .

### { Result Evaluation Criteria }

There should be no change which might affect the practical display function when the display quality test is conducted under normal operating condition.

## Product Specification

## 7. International Standards

### 7-1. Safety

- a) UL 1950 Third Edition, Underwriters Laboratories, Inc. Jan. 28, 1995.  
Standard for Safety of Information Technology Equipment Including Electrical Business Equipment.
- b) CAN/CSA C22.2 No. 950-95 Third Edition, Canadian Standards Association, Jan. 28, 1995.  
Standard for Safety of Information Technology Equipment Including Electrical Business Equipment.
- c) EN 60950 : 1992+A1: 1993+A2: 1993+A3: 1995+A4: 1997+A11: 1997  
IEC 950 : 1991+A1: 1992+A2: 1993+A3: 1995+A4: 1996  
European Committee for Electrotechnical Standardization(CENELEC)  
EUROPEAN STANDARD for Safety of Information Technology Equipment Including Electrical Business Equipment.

### 7-2. EMC

#### b) Location of Lot Mark

Serial NO. is printed on the label. The label is attached to the backside of the LCD module.  
 This is subject to change without prior notice.

### 8-2. Packing Form

a) Package quantity in one box : 8 pcs

b) Box Size : 587mm . 408mm . 378mm

## Product Specification

## 9. PRECAUTIONS

Please pay attention to the followings when you use this TFT LCD module.

### 9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.  
Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

### 9-2. OPERATING PRECAUTIONS

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage :  
 $V= \pm 200mV$ (Over and under shoot voltage)
- (2) Response time depends on the temperature.(In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.)  
And in lower temperature, response time(required time that brightness is stable after turned on) becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.

## Product Specification

### 9-3. ELECTROSTATIC DISCHARGE CONTROL

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

### 9-4. PRECAUTIONS FOR STRONG LIGHT EXPOSURE

Strong light exposure causes degradation of polarizer and color filter.

### 9-5. STORAGE

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object.  
It is recommended that they be stored in the container in which they were shipped.

### 9-6. HANDLING PRECAUTIONS FOR PROTECTION FILM

- (1) The protection film is attached to the bezel with a small masking tape.  
When the protection film is peeled off, static electricity is generated between the film and polarizer.  
This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
