		Video camera 2-channel microphone AMPs

The LA7470M and the LA7470V are ICs with on-chipped microphone amplification peripherals for stereo video camera applications. They show excellent characteristics in space design.

Features

- Low-noise (Input $0.75\mu\text{Vrms}$, JIS-A filter, $R_g = 1\text{k}\Omega$)
- 2 inputs (internal/external microphones)
- On-chip HPF (with a through switch) for internal MIC wind noise elimination
- On-chip external power supply (with a current limiter)
- Capacitors = less than $1.0\mu\text{F}$ (excluding ripple filters)
- Stereo/monoral detect output pin for external MICs

Functions

- 2-channel microphone AMPs
- Internal MIC power supply (2 channels)
