

## TRANSIL™ array for data protection

## Main applications

Where transient overvoltage protection in ESD sensitive equipment is required, such as :

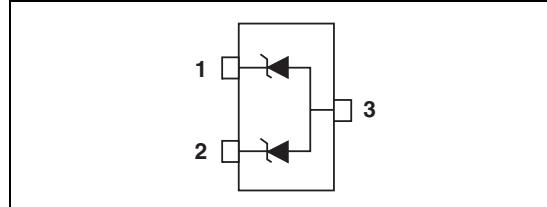

- Computers
- Printers
- Communication systems
- Cellular phones handsets and accessories
- Wireline and wireless telephone sets
- Set top boxes

## Description

The ESDAxxxWx are monolithic suppressors designed to protect components connected to data and transmission lines against ESD.

These devices clamp the voltage just above the logic level supply for positive transients, and to a diode drop below ground for negative transients.

## Benefits

- High ESD protection level: up to 25 kV
- High integration

## Complies with the following standards

### IEC61000-4-2

Level 4      15 kV (air discharge)  
                8 kV(contact discharge)

### MIL STD 883E - Method 3015-7 Class 3

25 kV HBM (Human Body Model)
